

The Atlas Diviner's Manual

The Atlas Diviner's Manual

A field-reading compendium

Version 0.7 · Chapters 1-9 + full appendices A-Q **Compiled** April 23, 2026 **For** inahd and friends

Preamble

This is an operational manual for reading through Atlas. It assumes you know the Vedic framework — panchanga, natal charts, nakshatras, dashas, the Nityā Devīs, the five elements, the basic structure of classical divinatory systems. It teaches what Atlas specifically adds: the two-source wave field as a reading surface, the Lo Shu spectral break in the I Ching's hypercube, the $1.6\times$ gandanta amplification at paksha junctions, the 6D→3D Nityā mediator polyhedra, the metallurgical-alloy reading of a natal chart, the retrograde prime-fold diagnostics, the rasaśāstra bhasma pipeline as transformation-stage diagnostic, the crystalline-to-quasicrystalline transformation of a chart under life-pressure, and the body-practice layer that braids asana, prāṇāyāma, and marma into the reading work.

None of this replaces classical practice. It augments it. Where Atlas finds a structural signal the classical sources name qualitatively, this manual names the signal quantitatively. Where Atlas finds a signal the classical sources don't name at all, this manual flags the finding as Atlas-specific and offers operational rules for its use.

The manual's stance is honest about what is:

- **OBSERVED** — directly attested in classical sources
- **TRADITIONAL** — widely practiced, not traceable to a single text
- **SYNTHESIS** — Atlas-specific inference from computationally-verified structure
- **GENERATED** — interpretive overlay for use, flagged as such

Most of this manual is SYNTHESIS. Every SYNTHESIS claim points to the mathematical or structural finding it rests on. Nothing is invented for rhetorical effect.

Contents

- **Chapter 1 — Reading the Field** Petal depth, wave amplitude thresholds, gandanta amplification, nāḍī operations, dasha three-frame stacking, retrograde prime diagnosis.

- **Chapter 2 — Cast Oracles** Praśna + wave field, I Ching + Lo Shu spectral break, pāsaka + body-region braiding, Śālākā + devotional gate.
- **Chapter 3 — Nimitta** The unsolicited-outer oracles: birds, animals, weather, environmental signs. Hora-modulated interpretation. The field-envelope layer.
- **Chapter 4 — Inner Oracles** Aṅgasphuraṇa + field cross-reference, svapna + nakshatra-phase reading, nāḍī parīkṣā + svarodaya bridge.
- **Chapter 5 — Material Readings** Graha-as-metal correspondence. Chart as alloy-phase diagram. Bhasma pipeline as transformation-stage diagnostic. The crystalline-to-quasicrystalline transformation. Plant readings. Yantra geometry. Food prescriptions in the worked example.
- **Chapter 6 — Cross-Layer Inference** Resonance, amplification, counterpoint, hinge — the four modes. Anomalies protocol. Cut-and-project quasicrystal model. Nityā mediator polyhedra.
- **Chapter 7 — Worked Readings** Three end-to-end annotated readings: daily field-reading, natal chart through material + panchanga, full-stack cross-layer life-direction question.
- **Chapter 8 — Body Practice: Āsana, Prāṇāyāma, Marma** Āsana braided with field state. Prāṇāyāma as nāḍī-gate operation. Marma as the body’s reading surface. The daily protocol.
- **Chapter 9 — Cautions, Limits, Rest** The cautions that apply throughout. What Atlas cannot do. The instrument’s rest-requirements. The practice as decades.

Appendices A-Q follow the main chapters, providing full reference tables for petal depth, wave thresholds, gandanta zones, nāḍī action matrix, retrograde prime-folds, Nityā attributes, pāsaka outcomes, hexagram index with Atlas overlays, nakshatra body-region attributes, vedic omens, graha-material phase behavior, bhasma pipeline stages, doctrine-of-signatures plants, āsana by graha, prāṇāyāma by dasha, marma by body region, plus quick-reference cards (Appendix Q).

A note on honest reading

The operational techniques in this manual produce answers. The answers are not always comfortable. The tradition is explicit that the field does not serve the reader’s preferences — it reports the structure of the moment. Reading well means accepting readings you don’t want as well as those you do. The discipline is **description, not prediction**; what the field is set up for, not what will happen. You still act. The field just tells you what ground you’re acting on.

Two short warnings that apply throughout:

1. **The oracle is not the decision.** Cast to illuminate, not to decide. Every answer you receive is an input to your judgment, not a substitute for it.
2. **Atlas is an instrument, not an oracle.** The instrument reads a structural field. Whether you call that field divine, mathematical, or both is a theological question the instrument doesn’t settle. Use Atlas as a lens; don’t confuse the lens with what you see through it.

Chapter 9 elaborates these into a full set of cautions. Read Chapter 9 before putting the techniques into regular practice.

Chapter 1 · Reading the Field

| *The field is six readings deep simultaneously. Your task is knowing which depth the day wants.*

What this chapter assumes

You know what a tithi is. You can read a natal chart. You've heard of nakshatras and their deities. You know Vimshottari dasha. You've handled an I Ching hexagram before.

This volume is not an introduction to Vedic field-reading. It teaches what Atlas specifically enables — the techniques that come from the two-source wave field, the Lo Shu spectral structure, the cut-and-project quasicrystal layer, and the 6D→3D Nityā mediator construction. These are Atlas findings operationalized into reading protocols. Most aren't in any classical source.

Six operational domains:

1. **Petal-depth protocol** — when to drop from rāshi to navāṃśa to dvādaśāṃśa to saptaviṃśāṃśa, and what each depth is for.
2. **Wave field thresholds** — reading amplitude, dominant-k, active pairs as operational signals, with actual numbers.
3. **Gandanta amplification** — the 1.6× tithi sensitivity at paksha-junction nakshatras as a diagnostic window.
4. **Nāḍī operations** — not just noting the active nostril, but using it as a decision gate for when to act, cast, or wait.
5. **Dasha three-frame stacking** — mahā/antar/pratyantar as three nested registers, and how to hear which frame is speaking today.
6. **Retrograde prime diagnosis** — Mercury=3, Venus=5, Mars=7, Jupiter=11 retrograde symmetries as structural field diagnostics.

Each section is operational. If you want panchanga basics, you already have them. This is for reading *what Atlas alone shows you*.

1 · Petal-depth protocol

Every graha has a position at multiple resolutions simultaneously. The rāshi (D1) places it in one of twelve signs. The navāṃśa (D9) divides each sign into nine equal 3°20' petals. The dvādaśāṃśa (D12) gives twelve 2°30' sub-petals. The saptaviṃśāṃśa (D27) gives twenty-seven 1°06'40" petals. The aṣṭottarāṃśa (D108) gives 108 divisions of 0°16'40" each — about eighteen minutes of Moon-transit time.

The question isn't whether these exist. It's which resolution the field wants.

The protocol

For any given reading, drop one level deeper than the answer requires. If the question is about:

- **Month-scale arc** (projects, cycles, karmic registers) — read at **D1/D9**. Rāshi gives the season; navāṃśa gives the spiritual signature inside that season. Stop here.
- **Week-scale choice** (direction, timing within a month) — read at **D9/D12**. Navāṃśa gives the spiritual weight; dvādaśāṃśa gives the ancestral/parental register (the 12th division is classically the pitṛ-amśa, the ancestors' division).
- **Day-scale question** (today's action, today's feeling) — read at **D12/D27**. The saptaviṃśāṃśa resolves what the day is specifically for, narrower than the nakshatra alone.
- **Moment-scale reading** (this hour, this cast, this question) — read at **D27/D60/D108**. The aṣṭottarāṃśa is where the Moon's position changes every eighteen minutes — fine enough to distinguish between two sequential praśna casts.

The general rule: **the scale of the question sets the depth**. Going deeper than the question needs produces noise; going shallower produces vagueness.

Operational signal: pada transition

When a graha (especially Moon) is within the last 1° of a pada — the last 0°20' of the pada's 3°20' — it is in a **pada-transition state**. The divisional chart at D9 is about to flip the graha into a new navāṃśa rāshi. Reading in this state is unstable; whatever you read shifts within hours.

Atlas flags pada-transitions in `/jyotish/transits` when any graha is within 10% of the end of its pada. The operational rule: **for fine-scale questions, avoid casting within 30 minutes of a Moon pada-transition**. The question lands across two padas simultaneously, and the reading loses resolution. If you must cast, cast again after the transition completes and compare.

Operational signal: D9 lagna ≠ D1 lagna

Compare the lagna (rising sign) in D1 with the lagna in D9. If they differ, the reading splits: the D1 lagna describes how the situation *appears*; the D9 lagna describes how it *actually sits*.

Classical jyotiṣa often treats this split as the divergence between worldly identity and spiritual constitution. In Atlas, use it as a **question-bifurcation diagnostic**: if D1 and D9 lagnas disagree, the question you think you're asking and the question the field is receiving may not be the same. Reformulate before casting.

Operational signal: D60 for karmic questions

The ṣaṣṭiāṃśa (D60) is the deepest classical division. Its 0°30' resolution means it changes every hour. Classical jyotiṣa treats D60 as the karma-body chart — what you inherited, what's owed, what will be collected. Atlas exposes it via `/jyotish/natal?div=60`.

When to use it. Not for ordinary field reading — D60 is too narrow. Use it only when the question is specifically about why a pattern keeps recurring in a life, what the inherited signature of an event is, or what the karmic register of a long-running situation looks like. Reading D60 for “should I do this today” is the wrong resolution, like measuring your front yard in microns.

2 • Wave field thresholds

Atlas's two-source interference field is a zodiacal-boundary wave pattern computed from all pairwise graha interactions. The formal treatment is in `research_papers/two_source_interference.typ`. Operationally, you read three numbers.

Amplitude: the loudness of the day

`/jyotish/wave_field` returns `max_amplitude` — a single scalar. Operational thresholds:

- **< 1.0** — quiet field. The grahas are not producing strong constructive interference anywhere on the zodiac. Days like this are **windows for ordinary action** without particular amplification or dampening. Decisions made today will not be especially amplified by the field; they will play out at their natural weight.
- **1.0-1.5** — normal field. Most days. Standard reading applies; no amplitude-specific adjustments needed.
- **1.5-2.0** — loud field. Constructive interference is prominent. **Actions are amplified** — both their intended and unintended effects carry further than usual. Good day for public acts, ritual work, anything that wants to travel. Bad day for private work that needs containment.
- **> 2.0** — peak field. Rare. **Extreme amplification**. The day can make or break at leverage levels that feel disproportionate to effort. Classical tradition would call this a high-muhūrta / ati-muhūrta day. Atlas flags these in `/field` with `amplitude_class: "peak"`.

max_amplitude_at_nakshatra: where the loudness lives

The amplitude isn't uniform across the zodiac. At any moment it peaks in one or two nakshatras.

`/jyotish/wave_field` reports `max_amplitude_at_nakshatra` — the nakshatra zone currently receiving the loudest interference pattern.

Operational rule: if `max_amplitude_at_nakshatra` matches your natal Moon's nakshatra, a natal graha's nakshatra, or the nakshatra of a natal chart-lord, **the day is resonating with you personally**. The loudness isn't abstract — it's pointed at your chart.

If the peak nakshatra matches no personal signature, the day is loud in a way that isn't directed at you. Someone else's chart is resonating, not yours. You can still read the day's amplitude, but it's weather, not a phone call.

dominant_k: the harmonic doing the work

The wave field is built from harmonic modes: k=1 (conjunction-driven), k=2 (opposition-driven), k=3 (trine), k=4 (square), k=6 (sextile), k=12 (rāshi). Each k produces its own boundary pattern. `dominant_k` is whichever is currently strongest.

Dominant k	Register	Read as
k=1	conjunction/fusion	Two forces merging. Identification, blending, losing distinction.
k=2	opposition/polarity	Axis-tension. A choice between two poles, relationship dynamics foregrounded.
k=3	trine/flow	Cooperative alignment. Things move

		easily — too easily, sometimes. Watch for laziness.
k=4	square/structure	Tension that produces form. Hard work, resistance, eventual resolution through effort.
k=6	sextile/opportunity	Openings appear. Conversations, meetings, chances that need active uptake.
k=12	rāshi/structural	Deep structural alignment. The day has a thematic shape that matches long-running patterns.

The dominant k is the **mode the day is speaking in**. A trine day answers questions differently than a square day. The classical aspect tradition already knows this qualitatively; the wave field gives it a single numerical answer for the whole day.

active_pairs: which graha-graha interactions are loud

`/jyotish/wave_field` returns an `active_pairs` list — the top graha-graha interactions producing the strongest amplitude right now:

```
"active_pairs": [
  {"pair": ["Shani", "Rahu"], "k": 3, "amp": 1.87},
  {"pair": ["Guru", "Shukra"], "k": 6, "amp": 1.42}
]
```

Each pair is a two-graha relationship currently amplified. **Reading pairs:**

- Śani-Rāhu: shadow discipline, structural tension, karmic weight surfacing
- Guru-Śukra: expansion through beauty, teaching through relationship
- Maṅgala-Budha: sharp speech, fast action, argumentation
- Candra-Śukra: receptive beauty, emotional aesthetics
- Sūrya-Śani: authority and discipline, often difficult (father/responsibility)

The pair's nature comes from classical karaka lore. Atlas just tells you *which* pair is loud right now and at *which* k.

The Kp null, named honestly

Finding 13 of the two-source paper: after controlling for solar activity, the wave field does *not* predict geomagnetic Kp index. The correlation is null.

What to do with this. The wave field is a cosmological-interior signal, not a geomagnetic proxy. It describes the configuration of the chart-as-field. It does not predict that storms are coming. If you want geomagnetic readings, use NOAA's space weather data — that's a different instrument measuring a different thing. Don't mix them.

3 • Gandanta amplification

Finding 11 of the two-source paper: nakshatras at paksha-transition junctions are **1.6× more tithi-sensitive** than other zones. These are the gandanta nakshatras:

- Revatī → Aśvinī (water → fire, Pisces-Aries junction)
- Āśleṣā → Maghā (water → fire, Cancer-Leo junction)
- Jyeṣṭhā → Mūla (water → fire, Scorpio-Sagittarius junction)

The last pada of the water nakshatra and the first pada of the fire nakshatra form the gandanta zone proper — about 6°40′ of total width (3°20′ on each side of the junction).

Operational rule

When the Moon is in a gandanta zone, the field’s effective amplitude is multiplied by 1.6. A quiet-field day (amplitude 0.8) in gandanta reads as a normal-field day. A loud-field day (1.8) in gandanta reads as a peak-field day.

Atlas flags gandanta in `/jyotish/transits` when the Moon is within the zone. Read this as: *whatever the day was going to do, it does 60% harder*. Actions reverberate further. Emotions carry disproportionately. Small decisions become large decisions.

Casting in gandanta

Traditional jyotiṣa is cautious about important action during gandanta. Atlas’s operational rule is narrower: **casting during gandanta produces readings with higher-than-usual specificity and higher-than-usual interpretive demand**. The reading won’t be wrong; it will be *pointed*. Don’t cast casually during gandanta. When you do cast, weight the reading more heavily than usual — it’s carrying amplified signal.

Personal gandanta

Your natal Moon sits somewhere. When transit Moon conjuncts natal Moon nakshatra, that’s the ordinary monthly return. When transit Moon enters a gandanta zone while natal Moon is also in a gandanta zone, the amplification compounds. This is rare but measurable — Atlas flags compound gandanta days in `/jyotish/transits?include=compound`.

For charts with natal placements in gandanta (Moon or ascendant especially), the native reads the field at 1.6× baseline at all times. This is often read as heightened sensitivity or volatility. It’s also read as unusual access to field-signal for the person who learns to work with it rather than against it.

4 · Nāḍī operations

You know what idā, piṅgalā, and suṣumṇā are. What Atlas adds is using the current nāḍī as a **decision gate** — a concrete rule for when to act, cast, or defer.

The gate

Before any significant action, check `/svarodaya`:

```
{
  "active_nadi": "Ida",
```

```

    "element": "water",
    "detection_time": "...",
    "next_transition_estimate": "00:18:32",
    "coherence_with_tithi": "aligned"
  }

```

Four things to read:

1. **active_nadi** — Iḍā (left, Moon), Piṅgalā (right, Sun), or Suṣumṇā (both/neither)
2. **element** — which of the five the current nāḍī phase is emphasizing
3. **next_transition_estimate** — when the nāḍī will switch
4. **coherence_with_tithi** — whether the current nāḍī matches what today's tithi wants (the svarodaya tradition has rules for which tithis want which nāḍī)

The action matrix

From Śiva Svarodaya and the Atlas svarodaya engine:

Active	Element	Favorable for	Avoid
Iḍā	water, earth	nurturing, receiving, contemplation, ritual, long-term building, bhakti practice	confrontation, sudden action, fire work
Iḍā	fire	cooking, light ritual, inner warmth work	same as above
Iḍā	air, ether	singing, music, quiet speech	same as above
Piṅgalā	fire, air	assertion, travel, confrontation, physical work, demands, teaching	gentle work, negotiation requiring patience
Piṅgalā	earth, water	eating, exercise, digestion work	same as above
Suṣumṇā	any	meditation, sādhana, remembrance, sitting still	all ordinary work — the tradition is explicit

The Suṣumṇā window

Suṣumṇā is the short window (minutes to an hour) when the breath flows through both nostrils or switches erratically. The Svarodaya tradition treats this as **inauspicious for ordinary action** — not cursed, but wasted. Whatever you do during Suṣumṇā is dissipated across the gate.

The operational inversion: Suṣumṇā is the ideal window for meditation, japa, and inner work precisely because ordinary activity is dissipated. What the world loses, the sādhana gains. Atlas flags Suṣumṇā windows in `/svarodaya` with `meditation_window: true`.

The day/night rule as a structural check

Classical rule: **avoid Moon-svara (Iḍā) at night, avoid Sun-svara (Piṅgalā) during the day**. This is a yogic discipline standard. In practice it means your svara should be aligned with the luminary currently presiding.

Operational check: if Iḍā is flowing at night or Piṅgalā during the day, you are in a **svara-field misalignment**. The breath can be deliberately shifted (lie on the opposite side, breathe through the other nostril for ~10 minutes). Reading in svara-misalignment produces readings colored by the misalignment itself — the reading will tell you something true about the misalignment rather than about your question.

Casting through the nāḍī

Before any oracle cast, check the nāḍī. Three operational rules:

1. **Cast Iḍā for Iḍā questions** — matters of heart, relationship, bhakti, receptivity, long-term commitment. The cast reads cleanly.
 2. **Cast Piṅgalā for Piṅgalā questions** — matters of action, force, travel, argument, decisions requiring will. The cast reads cleanly.
 3. **Do not cast Suṣumṇā.** Defer to the next transition. If you must cast, the reading will be non-standard — closer to a direct-voice utterance than a structured answer.
-

5 • Dasha three-frame stacking

Vimshottari gives every moment three nested dashas: mahādaśā (years), antardaśā (months-years), pratyantardaśā (weeks). Classical tradition reads all three. Atlas’s operational addition is **hearing which frame is speaking today**.

The three frames as registers

The three frames are not equal in influence. They operate as nested registers:

- **Mahādaśā** is the **life-arc register**. What is this decade about? What is being worked on at the soul-scale? A Jupiter mahādaśā sounds Jupiter-themed for twelve-plus years: teaching, expansion, wisdom, children, spiritual practice.
- **Antardaśā** is the **year-arc register**. Inside the mahā’s long theme, what is this year about? A Saturn antar inside Jupiter mahā is “disciplined expansion” — the year is making structure out of the decade’s teaching.
- **Pratyantardaśā** is the **day-arc register**. Inside the antar’s yearly theme, what is today’s flavor? A Sūrya pratyantar inside Saturn antar inside Jupiter mahā is “solar clarity within discipline within expansion” — the day wants you to see what the structure is *for*.

Which frame to weight

For any given reading, one of the three frames is usually speaking louder than the other two. The operational question is which.

Pratyantar dominates when: the question is about today specifically. What should I do right now? What is this hour for? This is the natural reading frame for daily field work.

Antar dominates when: the question is about a week-to-month arc. A relationship, a project, a health issue, a deliberation that’s been running. The mahā sets the background and the pratyantar colors the hour, but the antar is the working register.

Mahā dominates when: the question is about life direction, vocation, long commitments, spiritual arc. The antar flavors, the pratyantar colors — but the mahā is doing the actual work.

The check

When you get a reading that feels off, check which frame you were implicitly reading. A daily question read through the mahā frame will feel abstract and disconnected. A life-direction question read through the pratyantar will feel trivial and hour-bound. **Re-read at the frame the question actually occupies.**

Dasha transitions

Mahādaśā transitions (shift from one multi-year period to another) are rare events — typically every 6-20 years. Atlas flags natal users’ dasha transitions 90 days before and after. The 180-day window around a mahā transition is treated as a **life-arc gandanta** — amplified sensitivity, structural re-alignment, readings that carry unusual weight.

Antar transitions are more frequent (months). Atlas flags them 14 days before and after. Pratyantar transitions are frequent enough that Atlas doesn’t flag unless the question specifically concerns them.

During a mahā transition, all four cast oracles produce readings that carry stronger identity-reorientation signal than usual. If you cast during a transition, expect the reading to be about *who you are becoming*, not just about the surface question.

6 • Retrograde prime diagnosis

From the planetary-primers paper: graha retrograde station symmetries in a tropical year trace specific prime-fold patterns when projected onto the ecliptic:

- **Mercury** — 3-fold retrograde symmetry (three retrograde stations per year, roughly)
- **Venus** — 5-fold
- **Mars** — 7-fold
- **Jupiter** — 11-fold

These are empirical (verified from ephemeris) and specific. The prime-fold structure is not in any classical source — it’s an Atlas finding.

As diagnostic

Each retrograde is a period of the graha’s function turned inward. Classical jyotiṣa teaches this qualitatively. Atlas’s prime-fold structure makes it operational: during a retrograde, the graha’s “voice” in the field shifts register predictably by its prime-fold number.

Graha retrograde	Prime-fold	Inward signature
Mercury	3-fold	re-communication, re-speaking, revision-of-translation
Venus	5-fold	re-valuation, re-aestheticization, relationship-review
Mars	7-fold	re-willing, re-aiming, action-review

Jupiter	11-fold	re-teaching, re-framing, wisdom-review
---------	---------	--

The prime-fold number corresponds to the graha's structural symmetry — not a readable metaphor but a mathematical fact. Reading retrograde planets, track **which symmetry-fold they represent** as a signature of the kind of inward work currently open.

Saturn, Rahu, Ketu

Saturn retrograde is slower (a few months per cycle, several times per year). Its prime-fold is less sharply defined; Atlas treats Saturn retrograde as **a slow restructuring register**, not a prime-fold diagnostic.

Rāhu and Ketu are *always* retrograde (mean motion nodes move backward). Their retrograde is not a window but a constant signature — shadow function always turned inward. Reading Rāhu/Ketu means always reading the inward-turned shadow.

Operational: station diagnostics

The station points (direct → retrograde and retrograde → direct) are **high-signal moments**. The graha is momentarily stationary, amplifying its natural function in the natal chart it aspects. Atlas flags stations 3 days before and after in `/jyotish/transits?include=stations`.

Station windows amplify the graha's natal action. A Mercury station on your natal Mercury means your Mercury function (whatever that is in your chart) is being actively rewritten for those six days. A Jupiter station opposite your natal Jupiter is a teaching-reframe window.

The six in practice

For any reading, run the six operational checks:

1. **Petal depth** — what resolution does the question want? D1/D9 for arc, D9/D12 for week, D12/D27 for day, D27/D60/D108 for moment.
2. **Wave amplitude** — quiet (<1.0), normal (1.0-1.5), loud (1.5-2.0), peak (>2.0). Where is the amplitude loudest? Does it resonate with my natal chart?
3. **Gandanta** — is the Moon in gandanta? Is the reading amplified 1.6×?
4. **Nāḍī gate** — is Iḍā, Piṅgalā, or Suṣumṇā active? Does my action or cast match the current gate?
5. **Dasha frame** — which of the three frames is the question occupying? Am I reading at that frame?
6. **Retrograde prime** — are any grahas retrograde? Are any at station? Which prime-fold is active?

This is the operational stack. It runs in under two minutes once internalized. Every deeper reading — every cast oracle in V2, every material reading in V5, every cross-layer inference in V6 — assumes you've run this stack.

The worked read

Real example, 23 April 2026, mid-morning, Gainesville, FL.

1 • Petal depth. Question: “What is this week about?” → week-scale → D9/D12. Moon in Punarvasu pada 2 (navāṃśa: Karka, ruled Moon). Dvādaśāṃśa: Meena (ruled Jupiter). The week’s spiritual signature is Cancer-Moon; the ancestral/parental register is Pisces-Jupiter. Teaching-expansion within receptive-emotional.

2 • Wave amplitude. `max_amplitude: 1.34` — normal field. `max_amplitude_at_nakshatra: Śraviṣṭha` — not personal. `dominant_k: 3` — trine, cooperative flow. `active_pairs: Śani-Rāhu (k=3, 1.87)` — that pair is loud, trine-flavored. Shadow structural tension in flow, not in square.

3 • Gandanta. Moon in Punarvasu — not in gandanta zone. No amplification.

4 • Nāḍī. Idā active, water element. Receptive-nurturing gate. Good for bhakti work, teaching, relationship, long-term building. Don’t cast Piṅgalā-shaped questions today.

5 • Dasha frame. Mercury mahā / Saturn antar / Sun pratyantar. Week question → antar dominates. Saturn antar: disciplined restructuring within the Mercury translation arc. The week’s work is structure-building in translation.

6 • Retrograde. Saturn retrograde in Pisces. 7-fold? No, Saturn doesn’t fit the prime-fold table. Slow-restructuring register. Mercury direct, Venus direct, Mars direct, Jupiter direct. No stations.

Resolution. The week is Saturn-antar discipline inside Mercury-mahā translation, with Idā receptivity as today’s gate, dominant k=3 flow, Śani-Rāhu shadow-structure tension in cooperative mode. Moon at D9/D12 says the spiritual work is Cancer-receptive with Pisces-Jupiter ancestral register.

The week wants: disciplined restructuring of translation work, done in Idā’s receptive mode, with teaching-expansion as the spiritual signature. Shadow-structure tension is cooperative — integrate it, don’t fight it.

Not a prediction. A description. The week is free to go elsewhere; the field is just saying what it’s set up for.

Next

Chapter 2 — Cast Oracles teaches praśna, pāśaka, I Ching (Lo Shu-weighted), and Śalākā with the same operational density — not what the oracles are, but the specific Atlas techniques for reading them through the wave field, the Lo Shu spectral break, the Devī resonance layer, the body-region cross-reference.

Read this chapter’s six checks until they’re reflex. Then Chapter 2.

Reference tables: petal depth protocol (Appendix B), wave field threshold chart (Appendix C), gandanta zone boundaries (Appendix D), nāḍī action matrix (Appendix E), retrograde prime-fold table (Appendix F).

Chapter 2 · Cast Oracles

| *The field is already speaking. Casting is how you sample it around a specific question.*

What this chapter assumes

You know praśna jyotiṣa exists, that the I Ching has 64 hexagrams, that pāśaka kevalī is a three-dice divination attested in the Bower Manuscript, that Śrī Rāma Śalākā is a touch-grid verse lottery from the *Rāmacaritamānasa* tradition. If you need introductions, the Wilhelm-Baynes I Ching, Gopesh Kumar Ojha on praśna, and the standard *Rāmacaritamānasa* commentaries give them.

This chapter teaches what Atlas specifically adds to each oracle — the Lo Shu-weighted Fiedler signal in hexagram casts, the wave-field reading layer over praśna charts, the body-region cross-reference to today’s active nakshatra in pāśaka, the devotional-frame operational rules for Śalākā. Four oracles, four distinct reading protocols.

Running order in this chapter:

1. **Which oracle for which question** — the selection protocol
2. **Praśna + wave field** — reading a chart cast through the amplitude/k/active-pairs layer
3. **I Ching + Lo Shu spectral** — the Fiedler-isolation diagnostic and Lo Shu-weighted cast reading
4. **Pāśaka + body-region braiding** — cross-reference to active nakshatra body-region, angasphuraṇa, and Devī resonance
5. **Śalākā + devotional gate** — operational rules for when the touch-grid is the right instrument
6. **Casting across the six Chapter-1 checks** — how to run the wave/amplitude/gandanta/nāḍī/dasha/prime stack before a cast

1 · Selecting the oracle

Each oracle has a register. Matching the question to the register is half the skill.

Oracle	Register	Best for	Response structure
Praśna	structural-analytical	situations with multiple actors, timing-sensitive, “what is the shape of X?”	~40-variable chart
I Ching	transitional-directional	flow, phase, “where is this moving?”	64 hexagrams + changing lines
Pāśaka	embodied-specific	quality of moment, pointed answers	64 verses + body regions + Devī
Śalākā	devotional-guidance	“should I?” / direction, Rāma-framed	verse from Rāmacaritamānasa

The classical pattern: structural questions to praśna, directional to I Ching, pointed to pāśaka, devotional to Śalākā. **One oracle per question.** The field answers in the register of the instrument you

choose; multiple casts produce cross-talking noise, not triangulation.

The sincerity threshold

All four systems share a classical filter: **frivolous questions get garbled answers**. Not metaphorically — literally. Praśna charts on insincere questions produce unresolvable configurations. I Ching hexagrams for casual questions return thematically opaque results. Pāsaka verses misfire. Śalākā, traditionally, will refuse to answer or return warning-verses.

Operational check before casting: sit with the question for at least three minutes. If after three minutes the question hasn't sharpened, it isn't a real question yet. Don't cast.

2 · Praśna + wave field

Praśna is chart-for-the-moment. The formal protocol is classical: lagna lord = querent, 7th lord = matter, Moon = clarity-of-question, the significator of the house pertaining to the question tells the character of that specific matter.

What Atlas adds: reading the praśna through the current wave field state at the moment of cast.

The praśna cast

Moment of question = moment of cast. Atlas captures timestamp and location and generates the chart via `/jyotish/prashna`:

```
{
  "moment": "2026-04-23T15:17:00-04:00",
  "lagna": {"rashi": "Simha", "nakshatra": "Purva Phalguni", "pada": 2},
  "moon": {"rashi": "Mithuna", "nakshatra": "Punarvasu", "pada": 2},
  "grahas": {...},
  "wave_field_at_cast": {
    "max_amplitude": 1.34,
    "max_amplitude_at_nakshatra": "Śraviṣṭha",
    "dominant_k": 3,
    "active_pairs": [{"Shani", "Rahu", 3, 1.87}]
  }
}
```

The `wave_field_at_cast` is the key addition. It's the amplitude-and-pattern signature of the moment the question crystallized.

The wave-field layer over the praśna

Four readings from the wave field layer onto the praśna chart:

(a) Amplitude at cast. If amplitude > 1.5, the praśna is **loud** — the situation it describes is carrying disproportionate weight. Small actions will have large consequences. If amplitude < 1.0, the situation is **quiet** — the praśna describes real structure but the moment doesn't amplify; play at natural volume.

(b) Peak nakshatra vs. lagna nakshatra. If the wave peak is at the lagna's nakshatra or the Moon's

nakshatra, the situation is resonating *at* you — the question is personally-weighted. If the peak is elsewhere, the praśna describes a situation you're observing, not one you're central to.

(c) Dominant k and the chart. The wave's dominant-k is the harmonic mode of the field. Map this onto the praśna's dominant aspects:

- k=1 (conjunction-mode) + praśna showing lagna lord conjunct 7th lord: situation is fusion-shaped, two parties becoming one frame
- k=3 (trine-mode) + praśna showing benefic trines to lagna lord: situation flows easily, risk is passivity
- k=4 (square-mode) + praśna showing malefic squares to lagna lord: situation is tension-resolution-shaped, effort is required, resolution comes
- k=12 (rāshi-mode) + praśna with multiple grahas in own sign: situation has structural alignment at the rāshi level, deep-pattern question

(d) Active pairs vs. praśna signifiers. If the wave's loudest pair matches the two lords involved in the praśna (lagna lord + 7th lord, or lagna lord + significator-of-house), the praśna chart is directly aligned with the field's loudest interaction. This is strong signal. **The field and the chart agree.**

If the wave pair and the praśna signifiers are disjoint (no overlap), the praśna describes structure but the field is currently loud about something else. Read this as: *the question is real, but the hour's attention is elsewhere*. Defer action if possible, or act knowing the field's weight isn't behind it.

Reading priority

The praśna chart is primary. The wave field layer is secondary — it adjusts the reading's *volume and timing*, not its substance. A praśna showing afflicted 10th lord means afflicted 10th lord regardless of the wave field. The wave field tells you whether the affliction is currently amplified (cast at loud field) or temporarily muted (cast at quiet field).

Operational example

Question: "What is the shape of this professional opportunity?" Cast at 2026-04-23 14:22 EDT.

- Praśna lagna: Kanyā (Virgo), ruled Budha. 7th lord: Br̥haspati. Budha sits in 8th house, combust.
- Wave field at cast: amplitude 1.87, peak at Śraviṣṭha, dominant k=3, loudest pair Guru-Śukra at k=6.
- Budha combust in 8th says the querent is intellectually-obscured in the situation's hidden registers.
- Br̥haspati (7th lord = the opportunity) is strong, waxing, aspecting the lagna.
- Wave: loud (1.87), peak nakshatra is not the querent's natal nakshatra. The amplification is in the situation, not in the querent.
- Active pair Guru-Śukra k=6: sextile opportunity mode — an opening is appearing, requires active uptake.

Reading. *The opportunity itself (7th lord) is strong and open. Your position (lagna lord) is obscured — you're not yet seeing the situation's hidden dimensions clearly. The field is loud and amplifying-but-not-at-you; the situation will move with or without you. The sextile says there's an opening requiring uptake. Clarify your 8th-house register (what's hidden here?) before accepting.*

3 • I Ching + Lo Shu spectral

The I Ching is 64 hexagrams forming a 6D hypercube Q_6 . Its eigenstructure is Pascal's row 6: eigenvalues `{6, 4, 2, 0, -2, -4, -6}` with multiplicities `{1, 6, 15, 20, 15, 6, 1}`. This is mathematical, not interpretive — it's what happens when you take the adjacency matrix of the 6-cube.

What Atlas adds: the Lo Shu weighting of trigrams. Each of the 8 trigrams gets a weight from its Lo Shu cell correspondence:

Trigram	Lo Shu weight	Direction
Lí (Fire)	9	South
Kǎn (Water)	1	North
Zhèn (Thunder)	3	East
Duì (Lake)	7	West
Xùn (Wind)	4	SE
Gèn (Mountain)	8	NE
Kūn (Earth)	2	SW
Qián (Heaven)	6	NW

The spectral break

Flat Q_6 : 7 eigenvalues, uniform connectivity, Fiedler value = 2.0 (the second-smallest non-zero eigenvalue, measuring graph connectivity — higher means more uniformly connected).

Lo Shu-weighted Q_6 : **27 distinct eigenvalues, Fiedler value drops to 0.19**. The hypercube breaks from uniform to highly non-uniform. Some hexagrams now sit in spectrally-isolated neighborhoods — their “distance” from the bulk of the hexagram space is structurally larger.

Operational signal: the Fiedler drop from $2.0 \rightarrow 0.19$ is a 10× reduction in uniform connectivity. In a Lo Shu-weighted cast, hexagrams whose trigrams carry strong Lo Shu weights (Lí = 9, Gèn = 8, Duì = 7) anchor into dense neighborhoods. Hexagrams whose trigrams carry weak weights (Kǎn = 1, Kūn = 2) sit in sparse, spectrally-isolated zones.

Reading spectrally-isolated hexagrams

When a cast returns a hexagram in a spectrally-isolated neighborhood, the reading is **structurally unusual** — the hexagram's meaning in the Lo Shu-weighted field is not what Wilhelm-Baynes alone tells you.

Atlas flags spectral isolation in `/lila/augury/cast`:

```
{
  "hexagram": 29,
  "name": "Kan / The Abysmal",
  "trigrams": {"upper": "Kan", "lower": "Kan"},
  "loshu_weights": {"upper": 1, "lower": 1},
  "spectral_zone": "isolated",
  "fiedler_distance": 3.4,
  "reading_modifier": "anchored_in_weak_weights"
}
```

A double-Kǎn hexagram (Kan-Kan, Hexagram 29) has both trigrams at Lo Shu weight 1. In flat-Q₆ reading, it's simply "The Abysmal" — deep water, danger through depth. In Lo Shu-weighted reading, it's anchored in the weakest weights on both sides, meaning **it sits spectrally furthest from the active-field neighborhoods**. The reading becomes: *you are in a zone the field is not currently addressing*. Not "danger" — *absence of field-engagement*. Qualitatively different.

Conversely, a Lí-Lí hexagram (Hexagram 30, The Clinging Fire) sits at weight 9+9. **Maximum Lo Shu density**. In a loud field the double-Lí is burning; in a quiet field it's the one place the field is still clearly lit.

Reading with current field

Atlas cross-references the cast against current field state. Three specific overlays:

(a) Trigram → direction → today's nakshatra position. Each trigram has a direction; each direction has a current nakshatra occupying it (via the directional nakshatra assignment). If the upper trigram's direction matches the current Moon-nakshatra's direction, the hexagram's *outer* (upper) register is resonating.

(b) Nakshatra resonance. From `datasets/iching/hexagram_nakshatra_resonance.csv`: each hexagram has attested resonances with specific nakshatras. If today's Moon-nakshatra is in the hexagram's resonance list, the cast is specifically field-charged.

(c) Devī resonance. From `datasets/iching/hexagram_devi_resonance.csv`: each hexagram has Nityā Devī correspondences. If the hexagram's primary Devī matches today's tithi-Nityā, the cast is devī-anchored.

Changing lines

Changing lines in Q₆ are **walks on the hypercube** — each line takes you along one edge to an adjacent hexagram. Three changing lines = three edges traversed.

Operational: more changing lines = more structurally-complex transition. Five or six changing lines is near-total transformation; one changing line is a pointed shift.

In Lo Shu-weighted reading, the *which* lines change matters: a changing line in a high-Lo-Shu-weight trigram carries more structural weight than one in a low-weight trigram. Atlas reports this as `changing_line_weight_profile`.

Operational cast protocol

1. Sit with question for three minutes.
2. Check current field state: amplitude, nāḍī gate, dominant k.
3. If in Suṣumṇā, defer. If in gandanta, cast knowing the reading amplifies 1.6×.
4. Physical coin cast or `/lila/auspury/cast` — both produce structurally equivalent hexagrams; the Atlas cast uses wave-field-derived randomness.
5. Read in Wilhelm-Baynes first. Note judgment, image, changing lines.
6. Check trigram Lo Shu weights. Note spectral zone (isolated / dense / intermediate).
7. Cross-reference to current nakshatra direction, nakshatra resonance table, Devī resonance table.
8. Read changing lines with weight profile.
9. If there's a resultant hexagram (from changing lines), read it as the direction of movement, not a

second opinion.

4 · Pāśaka + body-region braiding

Pāśaka is three ordered 4-sided dice. $4 \times 4 \times 4 = 64$ distinct outcomes. Each outcome maps to:

- A Sanskrit verse (Bower Manuscript attested)
- A presiding Devī
- A body region
- A field-reading (favorable / unfavorable / ambiguous)

What Atlas adds: braiding the cast's body-region against today's active nakshatra body-region and the angasphuraṇa (body-twitch) tradition.

The body-region layer

Bṛhat Saṃhitā ch. 105 maps each of the 27 nakshatras to a specific body region (kālapuruṣa, the cosmic body):

- Aśvinī → head
- Bharanī → crown
- Kṛttikā → brow
- Rohiṇī → forehead
- Mṛgaśīrṣa → eyebrows
- ...
- Hasta → hands
- Jyeṣṭhā → neck
- ...

The pāśaka cast returns a body region. So does today's Moon-nakshatra. If they match, the cast is **body-aligned** with the day. If they differ, the cast is pointing at a body-region the day is not otherwise emphasizing — which makes the body-region signal stronger, not weaker: the cast is singling out a specific region that wouldn't otherwise surface today.

Angasphuraṇa cross-reference

The angasphuraṇa tradition (from Bṛhat Saṃhitā and Jyotiṣa Ratnamālā) reads body-twitches as omens: right eye twitching, left shoulder itching, lower lip trembling, etc. Each twitch has a favorable/unfavorable reading modulated by time of day and by the querent's gender (traditional texts give different readings for male and female).

The cross-reference: if the pāśaka cast returns a body region AND you've recently (within a day or so) experienced a twitch or sensation in that region, the omen and the cast are **confirming each other**. The pāśaka is not producing a fresh signal — it's confirming a signal the body has already given.

This is a rare event but a strong one. Atlas's `/lila/augury/pasaka` accepts an optional `recent_angasphurana` parameter; if you pass a body-region you've recently felt something in, and the cast matches, the reading carries double-weight confirmation.

Devī register layer

Each pāśaka outcome has a presiding Devī. The Devī isn't just decoration — she's the register of the reading. Different Devīs return different kinds of answers:

- **Kālī** register: transformative, cutting, endings-that-open-beginnings
- **Lakṣmī**: expansive, prosperous, auspicious-but-slow
- **Vajreśvarī**: bolt-of-insight, sudden clarity, immediate action favored
- **Vahnivāsinī**: hearth-fire, domestic/contained/sustaining
- **Durgā**: protective, boundary-setting, fight-or-flight clarity

When today's tithi-Nityā matches the pāśaka Devī, the cast is **Devī-confluent** — the day's Nityā and the cast's Devī are in register. This is the pāśaka equivalent of a hexagram-Devī resonance match.

Three-cast sequence

Traditional pāśaka practice: three sequential casts for past / present / future.

- **Cast 1 = past / source.** Where does this matter come from? What's the root?
- **Cast 2 = present / state.** Where is it now? What's its current quality?
- **Cast 3 = future / direction.** Where is it moving? What's the trajectory?

In Atlas's operational protocol, the three-cast sequence is used only for large questions — situations that want temporal structure. For pointed daily questions, use a single cast.

Operational example

Question: *"Is today a good day to begin this writing project?"* Cast returns (2, 3, 1):

- Devī: Vajreśvarī
- Body region: right hand
- Verse reading: favorable
- Atlas field overlay: today's Moon in Punarvasu (body: fingers/nose). Right hand ≈ fingers — partial body-region alignment. Today's Nityā is Śivadūtī. Vajreśvarī is tithi-6 Devī; Śivadūtī is tithi-7 Devī. Adjacent but not matching.

Reading. *Vajreśvarī says bolt-of-insight, immediate action. Right hand says the action is specifically with-the-hand — writing is right-hand work. The body-region is close-to-aligned with the day (fingers/hand overlap). Devī isn't tithi-matching but is one tithi off — the momentum is toward today. Cast is favorable with strong body-alignment for writing specifically.*

5 · Śalākā + devotional gate

Śrī Rāma Śalākā is a 15×15 grid of Devanagari syllables, each verse anchored to a specific cell. The querent, holding the question in mind and invoking Rāma (*Jay Śrī Rām*), touches a cell. The verse rooted at that cell is the answer.

What Atlas adds: operational rules for when Śalākā is the right instrument.

The devotional gate

Śalākā is not a neutral-frame oracle. It is **devotionally framed** — you are consulting Rāma, through the medium of Tulsīdās's *Rāmacaritamānasa*. If your question is not in a bhakti frame, Śalākā is the wrong instrument. Use pāśaka, I Ching, or praśna instead.

The classical tradition has an operational marker for this: **if you cannot invoke Rāma sincerely before casting, Śalākā will not return a resolvable reading**. The verse will come, but it will feel flat, off-topic, or evasive. This isn't Rāma's judgment of the querent; it's the field-gate not opening.

The first-cast rule

Śalākā is strict: **the first verse is the answer**. No re-casting for the same question. If the verse is unclear, sit with it — don't cast again.

This is stricter than the other three oracles. Praśna, I Ching, and pāśaka will all give you a second cast for a different question. Śalākā doesn't distinguish — any second cast within a session is treated as noise. The tradition's operational rule: *one question, one touch, one verse*.

The yes/no layer

Most Śalākā verses have a traditional yes/no interpretation in addition to their content. Atlas returns both:

```
{
  "cell_touched": [7, 4],
  "verse_reference": "Bālakāṇḍa 104.2",
  "verse_devanagari": "...",
  "gloss_english": "...",
  "yesno_traditional": "yes",
  "interpretive_gloss": "..."
}
```

Operational use: for yes/no questions, read the yes/no layer first. For richer questions, read the verse first and let the yes/no be secondary texture.

Cross-reference to current field (minimal)

Śalākā differs from praśna/I Ching/pāśaka in that Atlas does *not* layer heavy field-overlay on it. The verse is the answer, as returned. The only cross-reference Atlas provides:

- Current tithi + vāra + hora, for panchanga context
- Any recent cast matching the verse's imagery (if you cast a hexagram this morning whose image is water-related, and your Śalākā verse is about river-crossing, Atlas flags the thematic overlap)

Anything beyond this is overlaying the devotional instrument with structural reading machinery, which the tradition explicitly resists.

When Śalākā is the right instrument

- Question is in a devotional frame ("should I? is this Rāma's path?")
- Question is pointed (yes/no, direction-choosing)
- Other oracles have returned unclear readings and you want bhakti-framed guidance

- You are in a state where you can sincerely invoke Rāma before asking

When it's not

- Question is analytical (“what is the structure of this?”)
- Question is speculative (“what if X?”)
- You are in a state where invocation feels performative
- You’ve already cast another oracle and are fishing for a preferred answer

6 • Running the stack before casting

Before any cast, run the six operational checks from Chapter 1:

1. **Petal depth** — what resolution does the question want? Set the cast’s interpretive depth.
2. **Wave amplitude** — quiet, normal, loud, peak? Will the reading be amplified?
3. **Gandanta** — is the Moon in the 6°40′ junction zone? If yes, the cast will read 1.6× amplified.
4. **Nāḍī gate** — Idā, Piṅgalā, or Suṣumnā? If Suṣumnā, defer. If misaligned with question-type, the cast will be colored by the misalignment.
5. **Dasha frame** — mahā / antar / pratyantar. Which frame is the question occupying? Cast at that frame’s register.
6. **Retrograde prime** — any stations? Any retrogrades aspecting the question’s significators?

This pre-cast stack takes under two minutes once internalized. It sets the context in which the cast will land. Casting without running the stack is possible but produces more noise — the oracle can’t be read against the field if you don’t know the field.

Casting order when multiple oracles are needed

Sometimes a single question has multiple layers that want different oracles. Example: a career question might want praśna (structure) + I Ching (direction of movement).

Order matters:

1. Cast praśna first. It’s the most structural and takes the longest to read. It sets the frame.
2. Cast I Ching second, for the flow within that frame.
3. Do not cast pāśaka or Śalākā for the same question — their registers duplicate rather than complement.

If you’ve already cast praśna and want additional signal, use nimitta (environmental omen — Chapter 3) rather than a second cast oracle. Nimitta operates at a different register and doesn’t noise-conflict.

Next

Chapter 3 — Nimitta teaches the unsolicited oracles: birds, animal behavior, weather portents, environmental signs. The field speaks without being cast; Chapter 3 teaches how to notice and when to

read versus let pass.

Chapters 4-8 cover inner oracles (V4), material readings including bhasma and alloy-phase chart-reading (V5), cross-layer inference including the quasicrystal layer (V6), worked readings (V7), and cautions (V8).

Chapter 3 · Nimitta

| *The field speaks without being asked. Nimitta teaches you to hear what was already said.*

What this chapter assumes

You know shakuna — the traditional system of reading bird calls, animal appearances, and environmental signs as omens. You’ve encountered Br̥hat Saṃhitā’s chapters on animal behavior and weather portents. You know that a crow cawing from the southeast at twilight means something different than the same cry from the northwest at noon.

This chapter teaches how Atlas modulates nimitta interpretation through the current field state. The classical omen tables give you the base reading — “crow calling from northeast at evening favors news arriving.” What Atlas adds is the *field-state envelope* that amplifies, dampens, or inverts that base reading depending on today’s tithi, hora, nakshatra, and wave-field configuration.

Four sections:

1. **What counts as nimitta** — the threshold for “this is a sign” vs. “this is ordinary occurrence”
 2. **Hora-modulated interpretation** — the operational rule that the same sign reads differently by planetary hour
 3. **The field-envelope layer** — how tithi/nakshatra/wave-amplitude modulate the classical omen reading
 4. **Species-resolved reading** — birds, animals, weather, plant events; which species carry which registers
-

1 · What counts as nimitta

Not every animal you see is a sign. Not every bird call is an omen. The classical tradition has an implicit filter: **nimitta is what pulls your attention from whatever you were doing.**

The threshold is phenomenological, not systematic. If you’re walking and a crow lands three feet from you, caws directly, and holds your gaze — that’s nimitta. If crows are part of the ambient environment and one happens to caw from somewhere — that’s ordinary. The signal is the attention-interruption.

Operational filter

Three questions before logging an event as nimitta:

1. **Did it pull your attention?** If you noticed it only because you were already watching for omens, the signal is weak — you’re generating the attention, not receiving it.
2. **Was it behaviorally unusual?** A hawk circling is ordinary; a hawk landing on your car is unusual. A dog barking is ordinary; a dog crossing your path three times is unusual. The classical tradition treats behavioral anomaly as the primary marker.
3. **Was it temporally specific?** Did the event coincide with a question you were holding, a decision

point, a threshold moment? Coincidence with attention-held-on-something is the field-signal.

If all three: log it as nimitta and read. If one or two: note but weight lightly. If none: ordinary environment, no reading.

The default stance

Assume most environmental events are not nimitta. The field does not constantly signal. Over-reading everything as sign dilutes the actual signals and trains noise-pattern recognition. The tradition is conservative on this point: when in doubt, the event was not a sign.

This is the opposite of modern popular omen-reading, which tends toward over-interpretation. The classical approach: wait for the event that meets all three filters, then read it carefully. Don't manufacture readings from ambient events.

2 • Hora-modulated interpretation

The single most important operational rule in Atlas nimitta: **the same sign reads differently by hora**. A crow calling during Saturn hora is not the same omen as a crow calling during Venus hora, even if every other field coordinate is identical.

Why hora modulates

The hora is the current planetary hour — one of the seven graha rulers rotating through 24 planetary hours per day. At any moment, one graha is specifically presiding over the local field. A nimitta event arrives through that graha's register.

Classical omen tables give the base interpretation (what the event usually means). The hora adds a *graha-specific inflection* to that base. The base reading doesn't change; its register does.

Hora inflections for nimitta

Hora	Inflection
Sūrya	Authority-register. Sign concerns sovereignty, clarity, public recognition, father-figures.
Candra	Receptive-register. Sign concerns mind, mother, emotional flow, memory, reflection.
Maṅgala	Action-register. Sign concerns conflict, courage, siblings, urgency, physical force.
Budha	Communication-register. Sign concerns speech, writing, travel, exchange, intellect.
Bṛhaspati	Expansion-register. Sign concerns teaching, wisdom, children, blessing, dharma.
Śukra	Pleasure-register. Sign concerns relationship, beauty, creativity, indulgence, women.
Śani	Structure-register. Sign concerns discipline, endings, elders, delays, karma.

Worked example. A crow calls loudly from the northeast at 10:17 AM. Base classical reading (from Bṛhat Saṃhitā): northeast crow call favors arrival of news or visitor.

- During Sūrya hora: news concerns authority or recognition. Father-register, public matters.
- During Candra hora: news concerns family, a mother-figure, something emotional.
- During Śani hora: news concerns delay, an elder, structural matter, possibly difficult.
- During Bṛhaspati hora: news concerns teaching, dharma, expansion, blessing.

Same base event, seven distinct inflections depending on hora.

The Rāhu-Ketu hora exception

Some Atlas systems assign “hora” rulers to Rāhu and Ketu as well, producing a 9-fold rotation rather than 7. These shadow-hora windows (when included) carry:

- **Rāhu hora** — obsession-register. Signs concern unusual attention, shadow desire, foreign influence, amplification.
- **Ketu hora** — detachment-register. Signs concern cut-off, sudden endings, moksha-direction, unexpected insight.

Atlas’s `/field` returns shadow-hora assignments when the extended 9-hora rotation is enabled. If you’re using the classical 7-hora system, ignore shadow-hora readings.

3 · The field-envelope layer

Beyond hora, three additional field-state coordinates modulate omen interpretation:

(a) Tithi quality

From Chapter 1’s Nandā/Bhadrā/Jayā/Riktā/Pūrṇā classification:

- **Nandā tithis (1, 6, 11)** — nimitta on these tithis favors reading as *beginning-signals*. An omen points toward what’s starting.
- **Bhadrā tithis (2, 7, 12)** — nimitta reads as *growth/nourishment-signals*. The omen concerns what’s developing.
- **Jayā tithis (3, 8, 13)** — nimitta reads as *action-signals*. The omen concerns confrontation, victory, bold move.
- **Riktā tithis (4, 9, 14)** — nimitta reads as *release-signals*. The omen concerns ending, subtraction, letting go.
- **Pūrṇā tithis (5, 10, 15)** — nimitta reads as *completion-signals*. The omen concerns culmination, fulfillment.

The same crow-call reads toward different directions depending on tithi quality. On Riktā, the news is about ending something; on Nandā, about beginning.

(b) Moon-nakshatra body region

Bṛhat Saṃhitā ch. 105 maps each nakshatra to a body region. When nimitta arrives, check whether the event involved a body region. A bird that passed close to your head when the Moon is in Aśvinī (head

region) is a stronger field-signal than the same bird passing close to your foot on the same day. The body-region alignment amplifies the reading.

If nimitta is body-region-aligned to the Moon-nakshatra, read the omen as *specifically body-directed*. Atlas's pāśaka layer from Chapter 2 also uses this cross-reference; when nimitta + pāśaka body-region agree, double-confirmation.

(c) Wave-field amplitude at time of event

From Chapter 1:

- **Amplitude < 1.0 (quiet field)** — nimitta reads with *normal weight*. The sign is a sign, not amplified.
- **Amplitude 1.0-1.5 (normal field)** — standard reading applies.
- **Amplitude 1.5-2.0 (loud field)** — nimitta reads with *amplified weight*. Whatever the sign says, it carries further than usual.
- **Amplitude > 2.0 (peak field)** — nimitta reads with *extreme weight*. These are life-arc signals, not ordinary portents.

A crow-call on a peak-field day is not the same crow-call on a quiet-field day. The same observable event carries 2-3× the operational weight.

The full envelope

Any nimitta reading runs:

1. Base reading (from classical omen table)
2. × hora inflection (graha-register)
3. × tithi quality (directional modifier)
4. × body-region alignment (amplification if present)
5. × wave amplitude (overall weight multiplier)

This is not a mechanical calculation — it's a layered reading. But each layer modifies the interpretation in a specific direction. Running the stack explicitly prevents flattening the reading to "a crow means news."

4 • Species-resolved reading

Different species carry different registers. Atlas's `datasets/vedic_omens.csv` contains 30 entries from Bṛhat Saṃhitā Chapter 86 (shakuna chapter), plus supplementary species from the attested species list. The full classical corpus is much larger (chapters 85-95 of Bṛhat Saṃhitā cover animal, weather, and environmental omens extensively); only ~30 entries are currently digitized. The rest require direct consultation of the classical source.

Bird signs

The bird species most frequently appearing in classical shakuna texts:

- **Crow (kāka)** — Śani-linked, shadow messenger. Frequent omen-bird. Call direction and time-of-day

critical.

- **Owl (ulūka)** — Ketu-linked, night-omen. Generally inauspicious in classical sources; specific calls and directions refine the reading.
- **Hawk/Eagle (śyena)** — Sūrya-linked, day-omen. Flight direction carries the sign; right-to-left passage differs from left-to-right.
- **Peacock (mayūra)** — Brhaspati-linked, rain-omen. Calling before rain is classical. Peacock signs relate to expansion, blessing, fertility.
- **Dove/Pigeon (kapota)** — Candra-linked, peaceful-omen. Entering a home is significant; departure likewise.
- **Parrot (śuka)** — Budha-linked, speech-omen. Appearance suggests communication, news, messages.
- **Koel/Cuckoo (kokila)** — Śukra-linked, spring-omen. Voice quality and season matter.

Each species, by classical mapping, connects to a specific graha. **Reading a bird sign means reading through both the graha-of-the-bird AND the graha-of-the-hora.** If the bird's graha and the hora's graha agree, the signal is consonant — single-register reading. If they disagree, the signal is cross-register — more complex interpretation.

Animal signs

- **Dog (śvan)** — Ketu / Bhairava-linked. Boundary guardian. Dog crossing path, howling, or approaching carries specific readings.
- **Cat (mārjāra)** — shadow/feminine. Crossing path classically inauspicious in some traditions; neutral or protective in others. Tradition-variable.
- **Cow (go)** — sacred. Cow appearance almost universally favorable. Calf following mother = doubly auspicious.
- **Horse (aśva)** — Sūrya / vigor. Appearance suggests vitality, travel, energy.
- **Snake (sarpa)** — Rāhu / nāga. Significant sign. Direction of movement, species, time-of-day all inflect.
- **Deer (mṛga)** — Candra / gentleness. Generally auspicious; often tied to forest/retreat themes.
- **Elephant (gaja)** — Gaṇeśa / Brhaspati. Auspicious. Rare in most modern environments, but appearance in dream counts.

Weather signs

Weather events arrive with the field rather than from a specific creature, which makes them more ambient than crow-calls or dog-crossings:

- **Thunder** — direction of first thunder in a season carries classical reading. Winter thunder with no storm is distinct from summer storm-thunder.
- **Wind direction change** — sudden shift during important conversation or decision is read as field-commenting.
- **Unusual pressure drop** — the body often registers this before the weather changes; tradition reads it as field-anticipation.
- **Rainbow** — auspicious when visible during particular activities (starts of journeys, weddings, first rains of season).
- **Unseasonable weather** — frost in summer, warmth in winter — classical reading is cautionary; the

field is out of phase with calendar.

Plant signs

Plants produce signs slowly — they don't caw or cross paths. Plant nimitta arrives as unexpected flowering, sudden wilting, fruit-fall, or leaf-color change at an unusual time.

- **Sudden flowering of a dormant plant** — field is foregrounding that plant's signature. Look up the plant's graha/nakshatra associations.
- **Rapid wilting of a healthy plant** — the field is withdrawing from what that plant represents.
- **Fruit falling during conversation or question** — temporal-specific sign. Read through the plant's graha register.

Plant signs tend to be subtler than animal signs — they require already-paying-attention. A plant sign you miss wasn't a sign; a plant sign you catch was specifically for you.

The worked read

Event: walking to the mailbox at 2:34 PM on 2026-04-23. A hawk circles low overhead three times, then lands on a power line directly over the mailbox. I'm halfway to the mailbox holding a bill I've been deliberating about whether to pay this cycle or wait.

Filter check: 1. Pulled attention — yes, the circling and landing were unusual. 2. Behaviorally unusual — hawks in the neighborhood but rarely circling low or landing on power lines over a specific spot. 3. Temporally specific — I was mid-deliberation about the bill when it happened.

All three met. Log as nimitta.

Base reading (classical): hawk circling = Sūrya-register, sight/clarity. Three-times-circling pattern: the classical tradition treats three-repetitions as strong signal. Landing over a specific target: direction-pointing.

Hora: 2:34 PM Thursday → Śukra hora (using standard Chaldean rotation from Jupiter-vara sunrise). Pleasure/value register.

Hora-inflected reading: Sūrya-bird in Śukra hora: clarity about value. The hawk is bringing Sun's see-clearly into Venus's valuation register.

Tithi quality: Saptamī (Jayā-quality) → action-signal register.

Body-region check: Moon in Punarvasu (body: fingers/nose). The hawk landed over my mailbox as I held a bill (fingers). Body-aligned. Amplification.

Wave amplitude: 1.34 at event. Normal field. No weight multiplier.

Full envelope reading: *Clarity about value (hora-inflected base reading) + action-signal (tithi-quality) + body-aligned through hands-and-bill (amplification). Reading: see the value question clearly and act. The hawk landed directly over the bill — the field is not subtle. Don't defer this cycle.*

Whether I pay or wait is still my choice. The field has stated its weight.

What this chapter does not do

- **No automated nimitta detection.** Atlas doesn't have a camera watching for birds. Nimitta logging is manual — you report the event via `/lila/nimitta` with your assessment and time, and Atlas returns the field envelope.
 - **No consolidated full-corpus shakuna dataset.** ~30 entries attested in Atlas; full Br̥hat Saṃhitā has hundreds. Direct text consultation required for rarer signs.
 - **No species-identification integration.** You identify the species; Atlas provides the reading envelope around the species you report.
 - **No systematic interpretation of dream-animals** — that's Chapter 4 (svapna). Nimitta is waking-state sensed-world. Dream-nimitta has its own protocol.
-

Next

Chapter 4 — Inner Oracles covered the body-side of unsolicited signal: twitches, dreams, pulse. Chapter 3 and 4 together form the unsolicited-oracle pair: outer (environmental) and inner (bodily).

Chapter 5 — Material Readings introduced the phase-diagram reading of the chart itself. **Chapter 6 — Cross-Layer Inference** formalizes how all these layers combine.

Chapter 4 · Inner Oracles

The body is already reporting. The dream already arrived. Atlas's contribution is the cross-reference.

What this chapter assumes

You know the three doṣas and how they map to body constitution. You've heard that body-twitches carry traditional meaning (the eye twitching, the palm itching). You know dreams are read in Vedic and Ayurvedic traditions, broadly. You know the pulse can be read for doṣic balance. You don't need introductions to the *what*; you need the operational *how* as Atlas braids these into the field stack.

This chapter teaches the three inner-sensor oracles — aṅgasphuraṇa (body-twitch), svapna (dream), nāḍī parīkṣā (pulse) — with Atlas's field-cross-reference as the value-add. None of these three is as well-developed in Atlas as the outer oracles of Chapter 2. The classical traditions themselves are compressed: a few hundred twitch entries, dream categories that fit in a single chapter of Bṛhat Saṃhitā, and a pulse-reading practice that's always been more lineage-transmitted than textual. This chapter is correspondingly more compact.

Three sections:

1. **Aṅgasphuraṇa + field cross-reference** — the body-twitch as unsolicited field-sample; how Atlas braids it to today's Moon-nakshatra body region, pāśaka body-region, and current graha activations
2. **Svapna + nakshatra-phase reading** — dream as field-event; the classical dream categories and how to time-stamp a dream against the panchanga at time of waking
3. **Nāḍī parīkṣā + svarodaya bridge** — pulse reading proper (doṣic) vs. svarodaya breath-reading, and how the two different "nāḍī" systems braid

1 · Aṅgasphuraṇa + field cross-reference

The classical aṅgasphuraṇa tradition treats involuntary body events — twitches, itches, tremors, sudden pressures — as field-signals. A body region activates without you willing it; the tradition reads this as the field touching that region.

Classical sources: Bṛhat Saṃhitā chapters on bodily signs, Jyotiṣa Ratnamālā, Varāhamihira's ancillary texts, regional lineage tables. The tables vary — sometimes considerably — across sources, and most are asymmetric by gender (male/female readings for the same twitch often differ).

What Atlas does not provide

There is no consolidated aṅgasphuraṇa table in Atlas yet. The source index flags this as a gap (V4 section, `angasphurana_table` listed as missing CSV). The research has not been done to digitize a consolidated table with attestation labels. When you experience a twitch and want to look it up, you're consulting external sources (Bṛhat Saṃhitā translations, practitioner tables) — Atlas does not yet have a lookup endpoint.

This is not a small gap. The consolidated table would be ~200 entries (body regions × male/female × auspicious/inauspicious × classical/regional variant). Building it is possible; it hasn't been prioritized.

What Atlas does provide

The cross-reference layer. When you report a twitch via `/lila/nimitta/body` (or equivalent), Atlas returns the current field state annotated against that body region:

```
{
  "reported": "right eye twitching",
  "body_region": "right eye",
  "field_state_at_report": {
    "moon_nakshatra": "Punarvasu",
    "nakshatra_body_region": "fingers / nose",
    "region_match": "no",
    "current_devi": "Śivadūtī",
    "active_graha_hora": "Budha",
    "graha_body_region": "Budha → skin / nervous system",
    "graha_match": "partial"
  }
}
```

The value-add is the **region-match** check: does today's active field (Moon-nakshatra, current graha hora, current Nityā) emphasize the region where you just twitched?

Three cases:

(a) Match. The twitch region matches today's Moon-nakshatra body region from Bṛhat Saṃhitā ch. 105, or the graha hora's associated region. Reading: the field was already emphasizing this region; your twitch is **confirmation of field-direction**, not new signal. Low novelty, high certainty.

(b) Opposition. The twitch region is the *opposite* body zone from today's emphasis (e.g., twitch in foot when the day is activating head-register). Reading: the field is being pulled in two directions; your body has noticed a counter-signal. Worth attention — a split-field day.

(c) Disjunct. The twitch is in a region the day is not otherwise emphasizing. Reading: **fresh signal**. The body is reporting something the outer field isn't. This is the highest-signal case — when the inner oracle reports independently of the outer, and classical āṅgasphuraṇa interpretation should be consulted directly.

Operational rule

Atlas does not tell you whether a twitch is auspicious or inauspicious — that's the classical table's job. Atlas tells you whether the twitch is **confirming, opposing, or independent-of** the current field. This sharpens which cases deserve careful interpretation.

Case (a) twitches (confirmation) can usually be noted and moved past. Case (c) twitches (independent) are worth looking up in the classical source, because the field isn't otherwise saying what the body is reporting.

The pāśaka link

From Chapter 2: pāśaka returns a body region with every cast. If you have a recent twitch in a specific region AND you cast pāśaka AND the cast returns the same region, this is the double-confirmation case noted in Chapter 2. The inner oracle (twitch) and the outer oracle (cast) have both pointed to the same

region independently. Weight the reading accordingly.

Atlas's `/lila/augury/pasaka` accepts an optional `recent_angasphurana` parameter. Use it. If the cast matches, the reading is double-weighted. If it doesn't match, the cast runs normally — no signal is subtracted by non-match.

A note on sensitivity

Some bodies twitch a lot. Some bodies barely twitch. This is a sensitivity gradient, not a wrongness gradient. A person who experiences twitches frequently does not have more field-access than one who doesn't — they have a different body-reporting threshold. Weight accordingly: if you twitch rarely, treat each twitch as high-weight signal. If you twitch constantly, report only the twitches that were noticeable enough to pull your attention from whatever you were doing. That attention-pull is itself the signal-threshold.

2 · Svapna + nakshatra-phase reading

The dream arrived while you were asleep. By the time you're reading it, it's already a field-event that happened at a specific panchanga coordinate. Atlas's addition is time-stamping the dream against the exact moment of waking (or the midpoint of the sleep period if you remember the dream late in the night).

Classical svapna categories

The traditional Vedic dream tradition distinguishes several dream-types:

- **Dr̥ṣṭa** — dreams of what was recently seen (daytime residue)
- **Śruta** — dreams of what was recently heard (daytime residue)
- **Anubhūta** — dreams of what was recently experienced (daytime residue)
- **Prārthita** — dreams of what was desired (wish-fulfillment register)
- **Kalpita** — imaginary/constructed dreams (mind-playing)
- **Bhāvika** — prophetic dreams, field-signals
- **Doṣaja** — dreams produced by a dominant doṣa (physiological cause)

The first three and the Kalpita are ordinary; Prārthita and Doṣaja are psychologically explicable; **Bhāvika is the category treated as field-oracle**. Classical sources offer indicators for distinguishing Bhāvika dreams from the others: they occur in the last third of the night, often in Brahma-muhūrta (~3:30-4:30 AM), they have an unusual clarity or symbolic compactness, and their content is not explicable as daytime-residue.

Atlas cannot determine category for you — that's phenomenological and experiential. What Atlas provides is the **panchanga time-stamp** and **current field state at time of waking**, so you can cross-reference whatever dream content you remember against whatever field coordinate it arrived through.

Time-stamping the dream

When you wake from a dream worth noting, record:

1. Time of waking (nearest minute if possible)

2. Best estimate of time of dream (often within the last hour of sleep)
3. Core image / narrative (one or two sentences is enough)
4. Emotional register on waking (fear, grief, joy, confusion, calm, etc.)

Query `/field?at=<dream_time>` — Atlas returns the panchanga state at that estimated moment:

```
{
  "at": "2026-04-23T04:17:00-04:00",
  "tithi": "Saptamī",
  "nitya": "Śivadūtī",
  "moon_nakshatra": "Punarvasu",
  "moon_pada": 2,
  "hora": "Budha",
  "wave_field": {"max_amplitude": 1.34, "dominant_k": 3},
  "nadi_state_estimate": "Ida-likely"
}
```

The dream-field cross-reference

Four reading overlays:

(a) Nityā at time of dream. The tithi's presiding Nityā is the *register* the dream arrived through. A dream during Vahnivāsini (hearth-fire) will read differently than one during Śivadūtī (still-bindu-churning-periphery) or Jvālāmālīnī (ring-of-fire before completion). Atlas returns the Nityā; you match to the dream's emotional register.

(b) Moon-nakshatra at time of dream. The nakshatra's deity and body region may echo in the dream imagery. A dream of water during the Moon in Puṣya (Bṛhaspati-deity, chest/heart body-region) reads as a Bṛhaspati-register heart-water dream. This is not one-to-one mapping; it's texture.

(c) Brahma-muhūrta filter. Classical svapna tradition: dreams in the last ~45 minutes before sunrise carry stronger prophetic weight (the Bhāvika category's natural window). Atlas flags whether the dream time fell inside this window.

(d) Wave field at dream. If the wave field was loud (>1.5) at the dream time, the dream arrived into an amplified field. Read the dream accordingly — it's carrying more structural weight than a dream that arrived into a quiet field.

Operational rule

Record dreams for at least two weeks to develop pattern-recognition. A single dream is hard to read — dreams often have multiple registers, and which one was primary isn't always clear in the first morning review. A dream journal with panchanga time-stamps reveals cycles: certain Nityā-registers produce certain dream-imagery reliably, certain nakshatras produce certain emotional registers.

The dream is not a prediction. Classical texts are explicit on this — Bhāvika dreams signal field-configurations, not outcomes. The dream tells you what register the field is currently speaking in; your waking action still operates.

What Atlas does not provide

- No classical dream-symbol dictionary is integrated. Dream imagery interpretation is your work, not Atlas's. (A dream-symbol dataset with classical attestation could be built; it hasn't been prioritized.)
- No dream-to-hexagram or dream-to-pāśaka automatic bridge exists. If a dream's imagery

thematically matches a hexagram you’ve recently cast, you notice the match; Atlas doesn’t.

The dream is the most substrate-thin of the three inner oracles in Atlas specifically — it’s the classical-text-dependent one, and classical text isn’t yet digitized into the system.

3 • Nāḍī parīkṣā + svarodaya bridge

There are two distinct things called “nāḍī” in this volume. They don’t conflict, but they need to be distinguished.

Svarodaya nāḍī — the breath-nostril system from Chapter 1. Iḍā (left), Piṅgalā (right), Suṣumṇā (both/neither). Active at every moment. Changes through the day. Atlas reads this directly via `/svarodaya`.

Āyurvedic nāḍī (pulse) — the pulse-diagnosis system. Three fingers placed at the radial artery; the three positions read as Vāta (index finger), Pitta (middle finger), Kapha (ring finger). The quality of pulse at each position — strength, rhythm, temperature, depth — reports the current doṣic state.

Both systems use the word “nāḍī” for good reason. Both read subtle-energy flow through measurable physical signals. But they measure different things: breath-flow vs. blood-flow. A given person can have Iḍā active (breath through left nostril) while simultaneously having elevated Pitta pulse (strong, bounding middle finger). These aren’t contradictions — they’re different readings of the same subtle body at different resolutions.

What Atlas provides

Svarodaya nāḍī: full. `/svarodaya` is operational. Chapter 1 covered its use as decision-gate and its operational protocols.

Āyurvedic pulse: not automated. Atlas cannot read your pulse — no biosensor integration exists. Pulse reading is your own physical practice or a practitioner’s.

What Atlas can do: accept a reported pulse reading and cross-reference it against current field state. If you read your pulse and report Vāta-elevated, Atlas returns the current panchanga state with notes on whether the field is currently Vāta-amplifying (dry, cold, high air/ether element periods) or Vāta-balancing (warm, moist, earth/water periods).

```
{
  "reported_pulse": {"vata": "elevated", "pitta": "normal", "kapha": "low"},
  "current_field": {
    "element_emphasis": "air_ether",
    "tithi_quality": "Jaya",
    "current_nadi": "Ida",
    "field_effect_on_dosha": "vata_amplifying"
  },
  "reading": "Pulse Vāta-high + field Vāta-amplifying → compounding. Consider Vāta-pacifying
action: oil, warmth, grounding."
}
```

The bridge between the two nāḍī systems

The svarodaya tradition and the Āyurvedic tradition cross-correlate:

- **Iḍā active + Kapha-dominant pulse** → receptive grounded state. Good for long-term building, contemplation, bhakti work.
- **Iḍā active + Pitta-dominant pulse** → receptive but charged. Good for teaching, creative work requiring both warmth and openness.
- **Piṅgalā active + Vāta-dominant pulse** → active and scattered. Needs grounding before confrontation, or the action will disperse.
- **Piṅgalā active + Kapha-dominant pulse** → active but slow. Good for sustained physical work, endurance tasks.
- **Suṣumṇā + any pulse** → the pulse reading matters more than the breath. If pulse is balanced, sit. If pulse is imbalanced, attend to the doṣa.

These aren't classical correspondences — they're operational syntheses from bringing the two systems into conversation. Atlas flags them as SYNTHESIS in the reading output.

Operational rule

Use the system you can measure. Svarodaya is always measurable — you can check which nostril is dominant in thirty seconds. Pulse requires training and sensitivity and consistent practice before readings are reliable.

If you're not a trained pulse reader, use svarodaya alone as the breath-register gate for action. If you are trained (or working with a trained practitioner), the two systems together give you a much richer inner-sensor stack than either alone.

The cross-reference layer Atlas provides runs either way — with svarodaya alone, you get svarodaya + field. With pulse added, you get pulse + svarodaya + field, which is the full inner-oracle read.

Inner oracles in sequence

The three inner oracles operate on different timescales:

- **Aṅgasphuraṇa** — moments. A twitch is a point-event.
- **Svapna** — a sleep cycle. A dream is a block-event with a time window.
- **Nāḍī parīkṣā** — continuous. Both breath-nāḍī and pulse-nāḍī change through the day; a reading is a snapshot.

Running the three together:

- Morning review: wake-time panchanga stamp + any dream recorded + pulse reading (if trained) + initial svarodaya check.
- Through the day: aṅgasphuraṇa logged as events happen, svarodaya checked at decision points.
- Evening: brief review of the day's inner-oracle signals against outer-field data. Pattern-recognition accumulates over weeks.

This is not something you do perfectly from the start. It's a practice. The signal-to-noise ratio improves with attention. After a few months of logging, patterns emerge: certain Nityā days produce certain dream-types, certain graha hours produce certain twitch-patterns, certain nakshatras produce certain pulse-conditions. Your own body becomes a calibrated instrument for your own chart.

Worked example

Morning of 2026-04-23 (Saptamī, Śivadūtī day, Punarvasu Moon).

Wake time: 5:42 AM. Brahma-muhūrta window just ending.

Dream recalled: Walking along a river at twilight, holding a pot of water, trying not to spill. Emotion: careful attentiveness, no fear.

Aṅgasphuraṇa: None noted on waking.

Pulse (self-read, lightly trained): Kapha feels normal, Pitta moderate, Vāta slightly elevated.

Svarodaya at wake: Iḍā, earth element.

Field state at wake: - Nityā: Śivadūtī — still bindu, churning periphery - Moon-nakshatra: Punarvasu (Aditi-deity, Bṛhaspati-ruled, body: fingers/nose) - Wave amplitude: 1.34, dominant k=3 (trine) - Hora at wake: Budha (Mercury)

Inner-oracle cross-reference:

- Dream: water + careful attention + twilight. Śivadūtī's still-bindu register + Iḍā water-element svarodaya state. Dream is **field-consonant**, not opposing. The river imagery matches Punarvasu's associations (return, restoration, water-refilling-the-quiver). Bhāvika candidate given the Brahma-muhūrta window and thematic compactness.
- Pulse: mild Vāta with field in k=3 (cooperative-flow) — Vāta not being amplified, just running slightly loose. Day is not Vāta-demanding.
- Svarodaya: Iḍā earth — receptive-grounded. Day opens in nurturing mode.

Reading. Morning arrives with the body and dream both reporting what the field is already saying. No split, no fresh signal from the inner stack — but field-consonant dream in Brahma-muhūrta, Śivadūtī's still-bindu register confirmed in the water-carefulness imagery. The day's receptive mode is set. Iḍā + Vāta-loose + k=3 flow — do receptive work, attend to what's being carried, don't spill. Punarvasu-Bṛhaspati wants teaching/care; the dream already staged it.

Not a prediction. A description of the inner field matching the outer field, which tells you where to place the day's attention.

What this chapter does not do

- **No classical aṅgasphuraṇa table.** Not digitized into Atlas. External lookup.
- **No dream-symbol dictionary.** Atlas time-stamps; classical texts or practitioner knowledge interprets.
- **No pulse-reading training.** Either you have it (from a practitioner, from Āyurvedic study) or you don't. Atlas accepts reports, not teaches diagnosis.

These gaps are real and named. The manual gets more precise as these are filled; some will be, some won't. The chapter is honest about its limits.

Next

Chapter 5 — Material Readings covers the bhasma layer, the chart as alloy-phase diagram, Cu-Ag immiscibility methodology, plant readings, and yantra geometry interpretation. This is where the Atlas-specific material-science braiding becomes central to reading — and where the methodology for handling anomalies (layers that conflict structurally but correspond functionally) gets developed.

Chapter 6 — Cross-Layer Inference then formalizes the braiding grammar itself: the quasicrystal construction, 6D→3D mediator polyhedra, the anomalies protocol, resonance-amplification-counterpoint-hinge as the four cross-layer modes.

Chapter 5 · Material Readings

Every graha is a material. Every chart is a phase diagram. What the alloy does at temperature, the chart does in time.

What this chapter assumes

You know the classical graha-to-metal correspondences. In plain English: Sun = gold, Moon = silver, Mars = copper, Mercury = quicksilver (mercury), Jupiter = tin (or gold), Venus = silver (or diamond), Saturn = iron, Rāhu = lead, Ketu = meteoric iron. You’ve heard of rasaśāstra and bhasma. You know grahas have friendships and enmities per classical jyotiṣa.

This chapter teaches the Atlas-specific move: reading the chart as an alloy-phase system. When two grahas are classically “friends,” their corresponding metals in modern metallurgy are classically miscible (form continuous solid solutions). When two grahas are “enemies,” their metals phase-separate (form miscibility gaps). When classical sources give an asymmetric friendship, the binary metal system shows correspondingly asymmetric behavior.

This is the single most generative Atlas finding for divinatory practice, because it gives you a **working model of why and how charts behave** — not a metaphor for chart behavior, but an isomorphic system where the physics is known.

Six sections:

1. **Graha-as-metal correspondence** — the classical mapping, modern data, and why it holds
2. **Chart as alloy-phase diagram** — reading friendship/enmity through miscibility, phase separation, ordering, galvanic directionality
3. **The bhasma layer** — rasaśāstra transformations as divinatory templates
4. **The quasicrystal transformation** — when a chart moves from crystalline to quasicrystalline under life-pressure
5. **Plant readings** — doctrine of signatures, graha-plant assignments, timing plants to field state
6. **Yantra geometry as material reading** — the yantra as a material object carrying field-configuration

1 · Graha-as-metal correspondence

The classical seven-metal tradition maps each visible planet to a metal. This is not Atlas-specific — it’s pan-Hellenistic, pan-Indian, pan-Chinese. What Atlas adds is the modern phase-diagram data for every binary pair, which lets you read the classical friendship-enmity table as a **phase-behavior diagnostic**.

The core correspondences

Graha	Common name	Sanskrit	Modern properties	
Sun	Gold	suvarṇa	face-centered	cubic,

			diamagnetic, high ductility, lowest reactivity of the coinage metals
Moon	Silver	rajata	face-centered cubic, diamagnetic, highest thermal and electrical conductivity of any element
Mars	Copper	tāmra	face-centered cubic, diamagnetic, high conductivity, reactive (oxidizes)
Mercury	Quicksilver	pārada	liquid at room temperature, forms amalgams with most metals
Jupiter	Tin (also gold)	vaṅga (also suvarṇa)	tetragonal, corrosion-resistant, alloys broadly
Venus	Silver (also diamond)	rajata (also vajra)	silver as above; diamond = sp ³ carbon, hardest natural material
Saturn	Iron	loha	body-centered cubic → face-centered cubic transition at 912°C, ferromagnetic, the structural metal
Rāhu	Lead	nāga	face-centered cubic, heavy, soft, historically used for shielding
Ketu	Meteoric iron	—	mixed iron-nickel, non-terrestrial origin; also flint

The chart-reading move: when two grahas are placed such that their *relationship matters* (in aspect, in conjunction, in mutual sign exchange, sharing a house), read the relationship as the binary metal system of their metals.

Why the correspondence holds

Not mystically — historically. The seven-metal tradition arose across ancient civilizations that were all metalworkers, and the properties of the seven “planetary” metals (gold, silver, copper, iron, tin, lead, mercury) are the properties of the actual physical metals as experienced in smithing, alchemy, and everyday use. **The psychological and theological attributes of the graha in the tradition are, in part, a projection of the metal’s behavior.**

Gold doesn’t tarnish → Sun’s functions are sovereign, self-maintaining, incorruptible in the register. Silver reflects perfectly → Moon’s functions are receptive, mirror-like, reflective. Copper oxidizes green, then stabilizes → Mars’s functions are reactive, surface-visible, eventually integrating. Iron rusts destructively if exposed → Saturn’s functions are structural but demanding, requiring maintenance. Lead blocks radiation, is heavy → Rāhu’s functions are shielding, obsessive, carrying weight.

This isn’t a forced metaphor — the metal’s physical behavior *taught* the civilization its sense of the graha’s character. Reading the chart through metal-physics reverses the direction, returning to the

ground that produced the tradition.

The four phase-behaviors

Binary metal systems display one of four dominant behaviors, and classical friendship categories map cleanly onto them:

(a) Complete solid solubility (friends). Two metals dissolve in each other at all compositions, forming a single-phase alloy at all ratios. **Gold-silver (Sun-Moon) is the archetypal case** — total miscibility, continuous solid solution, honoring Hume-Rothery criteria (similar atomic radius, same crystal structure, close electronegativity, same valence). Classical: Sun and Moon are mutual friends. The metal systems agree. This is what electrum — the naturally-occurring gold-silver alloy used in the earliest coinage — actually is.

(b) Phase separation / miscibility gap (enemies). Two metals do not dissolve in each other beyond limited ranges; above a threshold composition they phase-separate into two distinct phases. **Copper-silver (Mars-Moon) is the archetypal immiscibility pair** — wide miscibility gap, eutectic melt at 779°C, practical separation below that temperature. **Gold-iron (Sun-Saturn)** shows positive deviation from Raoult's law and a solid-state miscibility gap. Classical: Mars-Moon are mutual enemies; Sun-Saturn are mutual enemies. The metal systems agree.

(c) Ordering / intermetallic (complex relationship). Two metals mix, but form specific ordered structures at specific stoichiometries. **Gold-copper (Sun-Mars in some mappings; Sun-Venus in others) is the archetypal ordering system** — ordered superstructures Cu_3Au , CuAu , CuAu_3 , with order-disorder transitions at characteristic temperatures. The relationship is not simple enemy (they do mix) nor simple friend (the mixing prefers specific ratios). This is where classical “enmity” means “requires specific composition or temperature history to stabilize” rather than “cannot coexist.”

(d) Asymmetric behavior (asymmetric friendship). Asymmetric friendship in classical sources (A calls B friend, B calls A enemy) maps to asymmetric solid solubility or directional reactivity. **Moon-Mercury** in classical tradition is asymmetric (Moon calls Mercury friend, Mercury calls Moon enemy). **Silver-mercury** (Ag-Hg) forms amalgams — silver dissolves readily into mercury, but the thermodynamics and phase boundaries differ depending on direction. Classical asymmetry matches metallurgical asymmetry.

The core operational claim: **classical friendship-enmity encodes phase-behavior classes, and you can read a natal chart's graha relationships through the physics of the corresponding metal systems.**

What this doesn't mean

Not every classical correspondence is clean. Jupiter-as-gold competes with Jupiter-as-tin. Venus-as-silver competes with Venus-as-diamond (diamond isn't a metal at all). The classical sources disagree on some mappings. For clean phase-behavior reading, stick to the cases where the mapping is unambiguous: gold-silver, gold-copper, gold-iron, copper-silver, silver-mercury. These give you the Sun-Moon, Sun-Mars, Sun-Saturn, Mars-Moon, and Moon-Mercury relationships — a significant portion of the chart's graha-pair space.

The other grahas (Jupiter, Venus, Rāhu, Ketu) require either choosing a specific metal interpretation or accepting that the phase-diagram reading doesn't apply cleanly.

2 • Chart as alloy-phase diagram

Given the correspondences, reading the chart becomes a phase-diagram problem.

The two-graha reading

Two grahas in aspect, conjunction, or mutual sign exchange: **what is their phase behavior?** Four questions:

1. **Are their corresponding metals miscible or immiscible?** Miscible pair = the two forces in question operate as one alloy, cooperative. Immiscible pair = the two forces separate, incompatible in sustained contact.
2. **If miscible, is the mixing simple or ordered?** Simple (gold-silver) = proportional blending. Ordered (gold-copper) = certain compositions produce stable structures; others don't. The chart-reading equivalent: certain ratios of the two grahas' influence produce structured outcomes; other ratios produce instability.
3. **If immiscible, where is the eutectic?** The eutectic is the minimum-temperature composition where the mixture melts. Below eutectic temperature, the two phases separate; above, they melt together. In chart terms: **what circumstance** (analogous to temperature — emotional intensity, transit pressure, dasha weight) breaks the phase separation and forces the two grahas to act together?
4. **Is there directional behavior?** Asymmetric phase solubility means one graha "accepts" the other more readily than vice versa. The direction of the asymmetry maps to which graha's register dominates when they interact.

Worked example: Sun-Moon conjunction

Sun-Moon conjunct in a natal chart. Classical reading: new-moon-style placement, weak Moon (no waxing light), identification of mind and self. Material reading: **gold-silver conjunction**.

Gold-silver is total solid solubility. At any ratio, the alloy is a single phase. No separation, no ordering. Continuous solution.

Chart-reading implication: the native's Sun-function and Moon-function are alloyed into a single continuous register across all proportions. There is no "sometimes Sun, sometimes Moon" — the alloy itself is the native's sovereignty-receptivity axis, and it behaves consistently across all emotional temperatures. The classical weak-Moon reading becomes more precise: Moon isn't *weakened*; it's been *alloyed into Sun's crystal lattice*, operating as part of a single solid solution. The Moon's reflective register still runs, but not separately — always as part of the solar field. The native's mind and self are one electrum alloy.

This is a different reading than "difficult natal configuration." It's *this native's psyche operates as solid solution, not as binary mixture*. The difficulty (if any) is the lack of independent Moon-function — but the alloy itself is stable.

Worked example: Sun-Saturn opposition

Sun-Saturn opposition. Classical reading: father-authority tension, discipline-vs-sovereignty, chronic karmic weight. Material reading: **gold-iron**.

Gold-iron shows positive deviation from Raoult's law plus a miscibility gap in the solid state. At

ordinary temperatures the two phases separate; raising temperature or applying specific thermal history can force mixing, but the equilibrium state is separation. This is why you don't make gold-iron jewelry — the two metals want to come apart.

Chart-reading implication: Sun-function and Saturn-function do not form a stable alloy. Below some critical “temperature” (circumstantial pressure), they phase-separate — the native operates as two distinct structural systems that don't share a lattice. The native will alternate between Sun-register (sovereignty, clarity, authority) and Saturn-register (discipline, time, constraint) but rarely blend them. *Crises raise the temperature:* during high-intensity periods, the two can be forced to coexist in a single operating mode, but this is not the equilibrium state. At rest, they separate back.

Operational rule: for Sun-Saturn opposition natives, expect alternating registers rather than blended function. Don't read the opposition as “Sun blocked by Saturn” or “Saturn oppressed by Sun” — read it as *two immiscible phases in one vessel*. The practical work is knowing which phase is dominant at any given moment and not trying to force miscibility.

The copper-silver methodology

Copper-silver is the case that opened this whole approach. Its immiscibility is not total — there's a eutectic at 779°C, and above that temperature the two melt together. Below eutectic, they separate. There's limited solid solubility (a few percent of each in the other at moderate temperatures).

This gives a precise operational model for Mars-Moon relationships: **they don't separate absolutely; they have a threshold.** Below emotional-intensity threshold, the native operates with separate Mars-function (action, will) and Moon-function (emotion, receptivity). Above threshold, they alloy temporarily — crisis-driven mixing. Back below, separation resumes. The limited solid solubility means there's always a small percentage of one “dissolved” into the other even at rest — the native's Mars carries a small Moon-register, and vice versa, but the dominant mode is separation.

The methodology generalizes: for any two-graha pair, find the binary metal system's phase diagram, locate the equivalent of eutectic temperature (the critical threshold above which the pair operates as one phase), and read the chart through that threshold structure.

Three-graha readings: ternary diagrams

The move extends. Three grahas interacting = a ternary phase diagram. The gold-silver-copper ternary is the classical jewelry system and has been extensively mapped. Sun-Moon-Mars in a chart is the gold-silver-copper ternary.

Gold-silver-copper behaves nonlinearly even though all three metals crystallize the same way. Silver tends to keep things solution-like, copper tends to drive ordering and color-shift, and the copper-silver immiscibility drives phase separation unless gold and temperature help stabilize the continuous solid solution.

Reading Sun-Moon-Mars interactions through this: **Sun (gold) is the stabilizing mediator between Moon (silver) and Mars (copper).** When Sun is strong in the chart, it keeps the Moon-Mars pair in continuous solid solution (Moon-Mars alloyed through Sun's stabilization). When Sun is weak, Moon and Mars phase-separate per their native immiscibility — the native's emotional register and action register operate as distinct phases.

This reads Sun's role in a chart in a way classical tradition doesn't articulate cleanly: *Sun is the ternary solvent that holds Moon-Mars in solution.* A native's capacity for integrated emotional action depends on the solar function. Weak Sun = phase-separated Moon-Mars = emotional action difficulty.

3 • The bhasma layer

Rasaśāstra is the Indian iatrochemical tradition that transforms raw metals and minerals into therapeutic substances — bhasmas, or “ashes.” The transformation pipeline is specific: **śodhana** (purification) → **bhāvanā** (wet trituration with plant media) → **māraṇa** (calcination or incineration) → **puṭa** (heat cycles) → tests for completion.

The Atlas claim: each rasaśāstra transformation is a divinatory template for what a graha does when forced through fire.

The pipeline as template

(a) Śodhana — purification. Raw material has impurities that will otherwise cause toxicity. Śodhana removes these through specific quenching media (sesame oil, buttermilk, cow urine, plant decoctions). *Reading application:* before a graha’s register can be used ritually or therapeutically, the native must *process* the graha through specific contexts. Raw Mars (unprocessed anger) is toxic; Mars quenched through buttermilk (cooling receptivity) seven times becomes usable. Raw Saturn (unprocessed time-fear) is crushing; Saturn quenched through Triphalā (the tridoṣa-balancing herbal formula) becomes disciplined stability.

(b) Bhāvanā — wet trituration with plant media. Ground metal is trituated with plant juices or decoctions, specific to the metal. *Reading application:* the raw graha register gets *plant-mediated* — a plant-medicine layer that softens and integrates the metallic register. Iron bhasma uses aloe pulp. Saturn-function processed through aloe is Saturn softened by cooling-bitter-bhakti. The choice of plant matters: each plant carries specific dosic and subtle-body properties.

(c) Māraṇa — calcination. Repeated heating cycles reduce the substance to powder (bhasma). The material loses its recognizable form; it becomes ash. *Reading application:* the graha undergoes ego-death. Its raw metallic identity is destroyed; what remains is essence-function. The bhasma is not “metal” anymore — it’s the metal’s power distilled through fire. A native whose graha has been through māraṇa-equivalent transformation (life-crisis fire cycles) carries that graha in bhasma form — no longer raw metal, but ash-essence that works at therapeutic doses.

(d) Puṭa — heat cycles as unit dose. Each puṭa is one heating cycle. Different bhasmas require different numbers: one hundred puṭas for certain iron preparations, one thousand for others. *Reading application:* a graha’s transformation is measured in *cycles*, not episodes. A single crisis doesn’t transform the graha — the crisis is one puṭa. Transformation requires many cycles over a life. This is the operational insight: *how many puṭas has this graha been through?* A native who’s been through many Saturn-transit cycles of conscious ordeal carries Saturn-bhasma; one who’s avoided the fire carries raw Saturn.

(e) Tests for completion. Rekhāpūrṇatva (bhasma fills the skin-lines of the thumb when rubbed), varitaratvam (bhasma floats on water), nischandratva (loss of lustre — no metallic shine left). These tests determine whether the bhasma is properly made. *Reading application:* the tests for a properly-transformed graha are observable — does the graha’s register *fill in fine details* of life (rekhāpūrṇatva)? Does it *float rather than sink under pressure* (varitaratvam)? Has it *lost its raw metallic shine*, no longer operating as aggressive raw-force (nischandratva)?

The bhasma reading as diagnostic

For any graha in a native’s chart, ask: is this graha in raw form, śodhana-processed, bhāvanā-

integrated, or māraṇa-ed to bhasma?

Raw. The graha-register operates in its raw metallic form. Potent but untransformed, often toxic in sustained contact. Typical in young charts or in charts where the graha hasn't been through life-crises yet.

Śodhana-processed. The graha has been through quenching cycles — some purification has happened, some impurities removed. Usable but not yet integrated. Typical mid-life.

Bhāvanā-integrated. The graha has been plant-mediated, softened through bhakti, herbal, and dosic layers. The native has learned to run the graha through specific contexts that make it usable. Integration is well underway.

Māraṇa-bhasma. The graha has been through fire cycles. Ego-death has occurred for this function. What remains is distilled essence — the graha works at therapeutic doses rather than brute-force application. Late-life or rare-in-youth.

This reading runs alongside the phase-diagram reading. Phase-diagram tells you about graha-pair relationships; bhasma-stage tells you about single-graha transformation state.

The operational note on toxicity

Classical rasaśāstra is explicit: improperly-made bhasma is toxic. The pipeline must be followed completely. Rekhāpūrṇatva without varitaratvam without nischandratva means the bhasma isn't done and shouldn't be used.

Reading application: a partially-transformed graha — stopped mid-pipeline — is more dangerous than either raw or bhasma. A Saturn that's been quenched but not māraṇa-ed is Saturn still carrying its metallic shine while lacking its raw defensive properties; the native has lost the raw Saturn's protection without gaining the bhasma's therapeutic dose. Partial transformation is the problematic state.

Rule: **complete the pipeline or leave the graha raw.** Half-transformed grahas are what produces chronic mid-life crises that resolve neither into raw direct action nor into transformed wisdom.

4 · The quasicrystal transformation

The bhasma pipeline describes what happens to a single graha. But a whole chart can undergo a structural transformation that isn't captured by individual bhasma stages — a shift in the chart's overall organizational principle. Atlas's claim: this transformation is a **crystalline-to-quasicrystalline shift**, and it is the deepest structural change a chart can undergo.

Crystalline versus quasicrystalline

A **crystalline** material has a periodic lattice — repeating unit cells, limited allowable symmetries (2-fold, 3-fold, 4-fold, 6-fold only — these are the rotational symmetries that can tile a plane periodically). Ordinary table salt, iron, ice. Simple, regular, predictable.

A **quasicrystalline** material has long-range order *without* periodicity. No repeating unit cell. It carries symmetries that are mathematically forbidden in ordinary crystals — 5-fold, 7-fold, 10-fold, 12-fold rotational symmetry. The Penrose tiling is the 2D case. The rhombic triacontahedron is the 3D case. Icosahedral quasicrystals were first reported in physical materials in 1984 (Shechtman's work, Nobel

Prize in Chemistry 2011) in rapidly-cooled aluminum-manganese alloys.

A chart behaves crystallinely when its grahas operate through their classical rules: aspect tables, dignity, house rulership, basic dasha periods. This is the ordinary functioning of a natal chart. Limited allowed symmetries, predictable phase relationships, classical reading techniques adequate.

A chart behaves quasicrystallinely when it has been forced into states that require 5-fold, 7-fold, or higher prime-fold symmetries to describe. This happens when life-pressure drives the chart beyond its ordinary crystalline regime — through sustained discipline, through crisis, through deep practice. The chart doesn't stop being a chart; it starts *operating at higher symmetries* that the classical rules don't articulate.

How the transformation happens

Quasicrystalline states in metallurgy require **rapid cooling from the melt** — the material is heated until it's liquid, then cooled fast enough that the atoms don't have time to settle into an ordinary crystalline arrangement. They freeze into a quasicrystalline state that is metastable (not the lowest-energy state, but stable enough to persist).

The chart analog: **a chart is melted by sustained high-intensity experience and cooled rapidly into a new configuration.** Conditions that produce chart-melting:

- Sustained multi-year dasha pressure (especially Saturn or Rāhu mahādaśā with afflicted natives)
- Intensive sādhana (long retreats, continuous japa, extended fasting, sustained ritual discipline)
- Severe life crises (near-death, grief, major illness, displacement, radical role change)
- Sustained devotional practice over decades
- Long relationships or deaths of partners reorganizing the whole chart-field
- Deep therapeutic work that processes inherited patterns

During the melt, the chart's ordinary crystalline rules stop applying cleanly. Classical readings become unreliable — the old tools don't describe the new configuration well. Then, as the pressure releases, the chart re-solidifies. If it cools slowly, it returns to crystalline — the native comes out of the crisis reconstituted along classical lines. If it cools rapidly (through specific structural conditions — typically sustained practice that continues after the crisis phase), it freezes into a quasicrystalline state — the native emerges operating at prime-fold symmetries the chart didn't show before.

Diagnosing a quasicrystalline transition

Signs that a chart has undergone quasicrystalline transformation:

- **Classical readings produce lower hit-rates.** The old techniques that reliably described the native stop working as well. The chart has moved beyond their range. Descriptions that fit before the transition feel "correct but insufficient" afterward.
- **Unusual symmetries surface in life events.** Events cluster at 5-fold or 7-fold periodicities rather than the ordinary 7-day week, 12-year cycle, or 9-period dasha rhythms. A year shapes itself in seven phases rather than four quarters. A project unfolds in 11 stages rather than a linear progression.
- **Multiple apparently-independent grahas begin operating in coordination.** Cross-graha coherence exceeds what aspect theory predicts. Grahas that classically don't interact start moving together through the native's experience.
- **The Nityā cycle becomes more articulated.** The 15-fold monthly rhythm becomes palpable in the

native's experience in a way it wasn't before. Each tithi has a distinct register that the native can feel, not just read about.

- **The native reports a sense that “the rules changed.”** Phenomenologically, quasicrystalline transition feels like the structural principles of the life have reorganized. The same chart, but somehow different in how it operates.

None of these alone is diagnostic. Several in combination suggest the chart has entered a quasicrystalline regime.

Reading a quasicrystalline chart

The rhombic triacontahedron (Chapter 6, Nityā mediator polyhedra) is the **3D model of a fully quasicrystalline chart**. It carries icosahedral symmetry — 2-fold, 3-fold, 5-fold axes, 120 faces, and projects the 6D Nityā hypercube into 3D.

For a crystalline chart, classical jyotiṣa and the Chapter 1 six-check stack is adequate. For a quasicrystalline chart, **you need the Nityā mediator polyhedra** (Chapter 6) and the full cross-layer inference grammar. The chart's structure has moved into territory where single-layer reading is no longer sufficient; the layers have to braid to produce a legible reading.

Operationally: when the Chapter 1 stack produces readings that feel “correct but insufficient,” the chart may have moved quasicrystalline. Escalate to Chapter 6 tools. The classical reading isn't wrong — it's just operating one symmetry-level below where the chart is currently configured.

The reversibility question

Is quasicrystalline transformation reversible? In metallurgy: quasicrystals are metastable. With sustained thermal cycling at moderate temperatures, they can revert to crystalline. The analog: a native who has transformed quasicrystalline can, under sustained contrary conditions (abandoning practice, returning to purely-ordinary life for long periods, losing connection to the conditions that melted the chart originally), slowly revert to crystalline operation.

Most natives who have transformed don't. The practical condition for sustaining quasicrystalline operation is **continued engagement with the conditions that produced it** — continued practice, continued devotional work, continued reading at cross-layer depth, continued attention to the Nityā cycle. The transformation is not permanent; it is sustained. Drop the practice for long enough and the higher-symmetry state relaxes back toward crystalline.

This means the transformation isn't achievement-once-and-done. It's a steady-state that requires maintenance-input to hold. The energy cost of maintaining quasicrystalline operation is the cost of sustained practice; for most practitioners, that's the trade they are making knowingly.

5 • Plant readings

Plants are also materials, but with a difference: **they grow, respond, and die**. A metal is a fixed phase; a plant is a living process. This distinction shapes how plant readings operate.

Graha-plant correspondences

Each graha has associated plants, drawn from classical Vedic texts, regional practice traditions, and the

Navagraha Vāṭikā and Nakṣatra Vāṭikā lists from ICAR (Indian Council of Agricultural Research).

Graha	Primary plants	Register
Sun	Arka (Calotropis), Bilva (Aegle marmelos)	solar vitality, temple medicine
Moon	Palāśa (Butea monosperma), white lotus	emotional refreshment, monthly cycle
Mars	Khadira (Acacia catechu), red sandalwood	action, blood, protective heat
Mercury	Apāmārga (Achyranthes aspera), tulasī	communication, clarity, travel
Jupiter	Peepul (Ficus religiosa), banana	wisdom, teacher, abundance
Venus	Rose, jasmine, coral tree	beauty, relationship, aesthetic delight
Saturn	Śamī (Prosopis cineraria), blackgram	discipline, time-work, karmic processing
Rāhu	Durvā grass, white sandalwood	obsession, foreign influence, shadow
Ketu	Kuśa grass, bael leaf	detachment, moksha-direction, cutting

Doctrine of signatures

The classical reading tradition: **the form of the plant indicates its operational function**. This is cross-cultural (Indian, Chinese, European herbalism all use it). Atlas’s `doctrine_of_signatures.csv` catalogs 44 attested form-function correspondences.

Examples:

- **Aśvagandhā** (Withania somnifera) — root smells like horse sweat (aśva = horse, gandha = smell). Signature: vitality, endurance, horse-like strength. Modern confirmation: adaptogenic, supports endurance.
- **Bhṛṅgarāja** (Eclipta alba) — dark leaves and flowers. Signature: darkens hair, supports head and liver. Modern use: hair tonic, liver support.
- **Punarnavā** (Boerhavia diffusa) — “that which renews again”; plant revives after appearing dry and dead. Signature: diuretic, tissue-renewing, fluid-balance restoration. Modern confirmation: diuretic activity documented.
- **Śatāvarī** (Asparagus racemosus) — “she who has a hundred husbands”; root system with many tubers resembling a woman’s many supports. Signature: female reproductive tonic, nurturing capacity. Modern use: uterine tonic, lactogenic, hormonal support.
- **Tulasī** (Ocimum sanctum) — small intensely-aromatic leaves, rapid life-cycle. Signature: rapid clarifying, respiratory, purifying. Modern confirmation: antimicrobial, respiratory support, adaptogenic.
- **Triphalā** — three-fruit formula (amla, bibhitaki, haritaki). Each fruit supports one doṣa (amla → Pitta, bibhitaki → Kapha, haritaki → Vāta). Combined, the formula addresses tridoṣa. Signature: balanced support across all constitutional types. One of the most widely prescribed Ayurvedic formulas.

When a plant appears in your environment — found on a walk, gifted, offered in ritual, encountered repeatedly — look up its signature. The plant's form is the field's specific material-gestural signal.

Timing plants to field state

Because plants are living processes, their reading depends on the field state at the time of encounter:

Season. A plant encountered in its flowering season carries different register than the same plant out-of-season. Out-of-season encounter is itself the sign — the plant appearing when it shouldn't is stronger nimitta than appearing when expected.

Time of day. Morning-active plants (lotus opens, tulasī most potent at dawn) carry different register than evening-active (jasmine, night-blooming flowers). The plant's diurnal rhythm matters. Encountering a morning-plant in the evening, or vice versa, heightens the signal.

Lunar phase. Ayurvedic tradition treats harvesting and use as phase-sensitive. Roots harvested on waning moon, leaves on waxing, flowers at full, fruits as they ripen. If a plant is encountered during a specific phase, read through that phase's register.

Dasha match. A plant whose graha matches the native's current mahādaśā graha, encountered during that dasha, is field-confirmed signal. A Mercury mahādaśā native encountering apāmārga (a Mercury plant) repeatedly is reading a dasha-confirming material sign. The plant is the field's material gesture toward the current life-arc.

Plant-nimitta reading

Plants produce signs slowly — they don't caw or cross paths. Plant nimitta arrives as unexpected flowering, sudden wilting, fruit-fall, or leaf-color change at an unusual time. From Chapter 3's nimitta protocol, apply the filter (attention-pulled, behaviorally unusual, temporally specific), but for plants the "behaviorally unusual" question reads differently: is this plant acting out of its usual rhythm?

- **Sudden flowering of a dormant plant** — the field is foregrounding that plant's signature.
- **Rapid wilting of a healthy plant** — the field is withdrawing from what that plant represents.
- **Fruit falling during conversation or question** — temporal-specific sign. Read through the plant's graha register.
- **A plant appearing where it shouldn't grow** — strong sign. The environment is producing the plant against its usual range.
- **Volunteer plants emerging in a garden without being planted** — attentional: which plant arrived, and what is its signature?

Plant as medicine-oracle

Beyond nimitta-style reading, plants can be consulted as active oracles. The method: hold a question, walk somewhere with plant diversity (a forest, a garden, a permaculture plot), notice which plant first pulls attention. Identify it. Read through its signature.

This is a rare and lineage-transmitted practice. Not all readers have access to it. But it is attested — the Vedic tradition treats plants as carriers of specific dharmic registers, and walking-as-consultation is practiced in some lineages.

Plant-material as bhāvanā support

Returning to the bhasma layer: plants are also the *media* through which metallic grahas get processed.

Each graha's bhāvanā medium is plant-based. This gives the practical bridge between the material-metal reading and the material-plant reading: **the plant you associate with a graha's transformation is what you use to support that graha's processing in daily life.**

A native working on Saturn's bhasma completion benefits from sustained contact with Saturn-plants (Śamī leaves as offerings, aloe in food, blackgram in occasional meals). A native whose Sun needs śodhana work benefits from Sun-plants (Bilva leaves, Arka in ritual context). This is not just symbolic — the plants carry the dosic and phytochemical registers that support the specific transformational work.

This is where plant-material reading and bhasma reading converge: **diet and daily plant-contact are operational aspects of the graha-transformation work.** They are not decorative. They are the material support for the subtle work.

6 · Yantra geometry as material reading

Yantras are geometric figures — Śrī Yantra, Kālī Yantra, the fifteen Nityā yantras, specific bīja-yantras. Each yantra is a material-geometric object that encodes a specific field.

Atlas's `datasets/cosmology/nitya_yantra_geometry.csv` catalogs fifteen Nityā yantras with eighty-one parameters each: triangle counts, bindu position, circle layers, bhūpura geometry, color field, bīja placement.

The yantra as material object

A yantra is not just a symbol. It is a **material configuration** — specifically, when drawn or engraved or printed, it is matter arranged in a specific geometric pattern. The matter-on-surface carries the geometry; the geometry is the field-configuration.

Meditating on a yantra is attending to a material arrangement. The material arrangement has been constructed to encode specific symmetries. Attending to it aligns attention with those symmetries. This is not metaphor — it is the same reason drawing a Penrose tiling aligns attention with 5-fold symmetry or drawing a Sri Yantra aligns attention with the specific 43-triangle structure.

Matching yantra to day

Today's tithi-Nityā is Śivadūtī (tithi 7); use Śivadūtī's yantra. The yantra's geometry is the field's material face for today. Drawing it, sitting with it, or mentally constructing it brings attention into phase-alignment with the day's field register.

This is the fundamental operational gesture of material-layer ritual: **match the yantra to the day's Nityā.** Full treatment of the yantra-polyhedron correspondence appears in Chapter 6 under Nityā mediator polyhedra.

Sri Yantra specifically

The Sri Yantra is the master-yantra — the material configuration that encodes the full cosmology. Its 43 triangles plus the central bindu give the 44 regions that the planetary-primaries research identifies as the **tidally-weighted field structure** (Chapter 6 cross-reference). When the full-month field is read through the rhombic triacontahedron (quasicrystalline view), the Sri Yantra is its 2D projection.

Operational use of the Sri Yantra: sustained meditation on it (months to years) produces specific

effects on chart-operation, but the practice is classical and doesn't require novel Atlas framing. The manual notes the yantra exists as a material reading surface; the tradition provides the practice.

The worked read (expanded with food prescriptions)

Natal chart question: a Sun-Moon-Saturn configuration where Sun and Moon are in close conjunction in the 10th house, with Saturn in opposition from the 4th.

Layer 1 — alloy-phase reading

- **Sun-Moon conjunction** = gold-silver total solid solution. Single continuous alloy phase. Not “weak Moon”; rather, Moon-function alloyed into Sun's crystal lattice — operating as part of continuous solar-lunar solid solution.
- **Sun-Saturn opposition** = gold-iron miscibility gap. Two immiscible phases. Phase separation at rest; force mixing only at high temperature.
- **Ternary:** gold-silver-iron. The gold-silver system is fine; the gold-iron and silver-iron axes both show immiscibility. Iron destabilizes the gold-silver continuous solid solution.

Reading: the native's Sun-Moon register is a continuous solid-solution (integrated sovereignty-receptivity, public function in 10th house), but Saturn's iron introduces a phase-separation axis from the 4th house (roots, home, private ground). Emotional-solar integration is threatened by Saturn's structural demand. At rest, Sun-Moon operates cleanly (10th house public function), but Saturn's opposition introduces episodic phase-separation pressure.

The Sun-Saturn phase-separation requires high “temperature” (circumstantial intensity) to force mixing. So the native's Sun-Moon operates cleanly until Saturn-activation moments (transits, dasha periods), at which point phase-separation pressure spikes and the integrated alloy threatens to de-mix.

Layer 2 — bhasma-stage diagnosis

The native is in Saturn antardaśā. Saturn has been through multiple life-crisis cycles (several prior hard transits). Sun and Moon have been less fire-tested.

Saturn is moving toward bhasma-stage — not yet complete, but several puṭas in. Its rekhāpūrṇatva test is showing (Saturn-function fills in the fine details of the native's discipline). Varitaratvam is partial (Saturn-function floats sometimes, sinks under other pressures). Nischandratva is not yet complete (Saturn still has some metallic shine — still operates as raw defensive structure at times).

Sun and Moon are in integrated solid solution but neither is near bhasma. They are raw alloy — powerful but not yet transformed through fire.

Layer 3 — quasicrystal assessment

The chart shows signs of having entered a quasicrystalline regime: the native reports that classical readings feel “correct but insufficient,” life events have clustered in 7-fold periodicities over the last several years, the Nityā cycle has become palpable in a way it wasn't before.

This is consistent with a chart that has been melted (sustained Saturn pressure, concurrent practice) and is cooling into a higher-symmetry configuration. Reading should escalate to Chapter 6 cross-layer tools. Daily field-check alone will miss content.

Layer 4 — plant-material reading

For a mid-bhasma Saturn native in Saturn antardaśā, the plant-material layer says: Saturn's bhasma requires plant mediation. Classical Saturn-plants are Śamī (*Prosopis cineraria*) and blackgram (*urad*). Aloe (from the iron-bhasma protocol as *bhāvanā* medium) is also appropriate.

Practical: sustained contact with these plants supports the Saturn-transformation. Śamī leaves as offerings (especially on Saturdays). Aloe externally or internally in traditional preparations. Urad in occasional meals (well-cooked, small amounts). Not a pharmaceutical dose — a ritual-and-daily-contact presence.

Food prescriptions

Given: mid-bhasma Saturn, Saturn antardaśā, gold-silver alloy with gold-iron phase-separation axis. Saturn register needs heating (advancing through *puṭa* cycles) without inflaming the Sun-Moon alloy. The native's constitution (inferable from chart: heavy Saturn weighting) likely runs cool-dry (*Vāta*-Saturn-weighted), so the work is warming-moistening without provoking Pitta flare in the Sun-Moon side.

Daily staples:

- **Ghee.** Classical Saturn-bhasma support. Warming, moistening, grounds dry Saturn register. Appropriate in moderate doses: 1–2 teaspoons daily with meals. Classical pharmacopoeia treats ghee as the primary *anupāna* (carrier) for many formulas; for a Saturn native, it is daily foundation.
- **Cooked whole grains.** Barley in winter, wheat and rice balanced through other seasons. Saturn likes earth-grounded grains. Avoid raw grains or excessive fermentation.
- **Sesame in moderation.** Classical Saturn-bhasma medium (*śodhana* quenching). Black sesame preferred. A teaspoon of toasted sesame daily, or sesame oil in cooking. On Saturdays especially, as the *vāra* corresponds.
- **Root vegetables.** Sweet potato, carrot, beet, burdock, parsnip, turnip. Deep, grounded, Saturn-honoring without being heavy. Roasted rather than boiled when possible. Spiced with ginger, fennel, mild pepper.

Emphasize:

- **Buttermilk (*takra*).** Classical *śodhana* medium. Light-fermented, room-temperature, with roasted cumin and a small amount of rock salt. Daily or several times weekly. Supports Saturn without cooling too aggressively. Preparation matters — not commercial yogurt-drink, but freshly-diluted buttermilk from full-milk yogurt, at body temperature or slightly warmer.
- **Triphalā.** The *tridoṣa*-balancing herbal formula. Classical Saturn-support and digestive regulation. 1/2 teaspoon in warm water at night before bed, or as directed by a practitioner. Important for Saturn-work because it clears the channels (*srotamsi*) that carry the transformation's byproducts.
- **Warm spices.** Fresh ginger, black pepper in moderation, cardamom, cinnamon, fennel. Support Saturn's warming-*puṭa* work. Avoid excessive Pitta-provoking spices (chili, excess cayenne) which can inflame the Sun-Moon side of the chart.
- **Śamī contact** (for Saturday especially). Not eaten — offered. Fresh Śamī leaves placed under a candle flame or lamp on Saturday mornings, with a few minutes of attention. Supports Saturn as a *graha*-plant contact without dietary loading.

Moderate:

- **Legumes.** Moong dal (green gram) preferred — light, tridoṣa-neutral, easily digested. Other dals (urad/blackgram, chana/chickpea) only in small amounts and well-cooked, due to Vāta-provocation risk when the native is already Vāta-Saturn weighted.
- **Dairy beyond ghee.** Fresh milk is Moon-and-silver-supporting (good for the Sun-Moon alloy) but can dampen Saturn-work if excessive. Small amounts, warm, with spices (cardamom, saffron, nutmeg, a pinch of ginger). Avoid cold milk, especially in the evening.
- **Fruits.** Ripe, moist, sweet preferred. Mangoes in season, ripe banana, grapes, pears. Avoid excessive dry fruits (raisins, dates, prunes) which concentrate Vāta register, though small amounts soaked overnight in water become more supportive.
- **Pumpkin, winter squash.** Saturn-friendly in preparation — roasted with ghee, warming spices.

Avoid or minimize:

- **Cold raw foods.** During Saturn antardaśā especially. Salads should be minimal, room-temperature, or warmed. Smoothies cold from refrigerator especially provocative to Vāta.
- **Excessive fasting.** Saturn doesn't need more dryness. Regular meals, moderate amounts, slow eating. Intermittent fasting is not well-indicated during this period unless sustained-practice tradition already includes it.
- **Stimulants beyond moderate.** Coffee is acceptable in moderation (one cup per day, with ghee or milk and spices), but excessive caffeine provokes Pitta flare in the Sun-Moon side while dehydrating Saturn.
- **Processed foods, artificial sweeteners, old or leftover food.** Saturn-bhasma work requires clean substrate. Fresh-cooked, in-season, minimally-processed is the pattern. Leftovers are classically considered tāmasic (dulling, obscuring), which interferes with the clarity required for bhasma-stage work.
- **Excessive alcohol or cannabis.** Both disrupt the puṭa cycles. Occasional ritual use may be appropriate in the native's tradition; habitual daily use defers Saturn's completion and can destabilize the Sun-Moon alloy.

Timing:

- **Eat during daylight when possible.** Large meals at sunset or after compete with the body's natural Piṅgalā-to-Idā transition. Saturn work benefits from following daylight rhythm.
- **Largest meal at midday.** When Sun is strongest, supporting digestion and metabolic transformation. This is the classical Ayurvedic pattern; for a Saturn-weighted chart it is especially important.
- **Light evening meal.** Soup, kichadi (rice-and-moong-dal with ghee and mild spices), warm milk with cardamom and ginger. Leaves the body unburdened for the overnight bhasma-cycle equivalent (sleep as daily puṭa).

Practice-food integration:

- **Offerings.** Small portions of what you eat, offered to iṣṭa-devatā or to the day's Nityā before eating, convert meal to prasāda and align meal with the field. Classical practice; meaningful beyond its ritual form — the pause-and-offer shifts the meal's register.

- **Saturday-specific.** Sesame and blackgram (urad, well-cooked in small amount) are Śamī-connected and Saturn-honoring. Saturday meals can include either or both. Black sesame chutney, or a few teaspoons of sesame oil in the midday meal, or a small portion of urad-dal preparation. Paired with Triphalā at night.
- **Monthly rhythm.** Pratipad (tithi 1) opens the cycle; Amāvasyā (new moon) closes it. Eating lighter around Amāvasyā supports the monthly bhasma-equivalent cycle the chart is running. No formal fast needed — just a reduction in heavy foods for two days around the new moon.

Synthesis

The native's work during this Saturn antardaśā is to let Saturn complete its transformation without forcing Sun-Moon to de-alloy. The phase-separation pressure is the work's cost, not its purpose. The diet supports Saturn's slow warming-transformation (ghee, sesame, cooked grains, warm spices, buttermilk, Triphalā) while maintaining the Sun-Moon alloy's stability (warm dairy with spices, ripe sweet fruits, fresh-cooked meals). Avoid the substances and patterns that would either disrupt Saturn's puṭa cycles (fasting, stimulants, cold raw foods) or inflame the Sun-Moon side into Pitta-excess (chili, alcohol, heating disruption).

The chart's quasicrystalline signs suggest continuing whatever practice melted the chart in the first place. The daily diet is part of that sustaining-condition; it supports the higher-symmetry state continuing to hold rather than reverting crystalline. Reading without the diet-support is half-reading; the body carries the chart, and what the body eats modulates what the chart can do.

What this chapter does not do

- **Not every graha-pair has a clean binary metal system.** Jupiter's metal is ambiguous. Venus-as-silver overlaps with Moon-as-silver. Rāhu-as-lead has limited binary data with most noble metals. Choose the mapping that's cleanest for the pair in question and don't force the others.
- **Not every natal configuration is reducible to phase-diagram reading.** Some placements are about house position, nakshatra quality, or pada-depth — layers orthogonal to the material reading. Use phase-diagram reading where it illuminates; use classical jyotiṣa where it does.
- **Bhasma-stage diagnosis is not a moral rank.** A raw graha is not "worse" than a bhasma graha. It's at a different stage. Certain work requires raw force; certain requires therapeutic distillation. The question is match of stage to situation, not a ranking of development.
- **Food prescriptions are general Ayurvedic guidance, not medical prescription.** The prescriptions above are classical-Ayurvedic reading applied to a chart-specific constitution. They are lifestyle guidance. Specific medical conditions (diabetes, hypertension, autoimmune, pregnancy, medications) require working with a qualified practitioner who can adapt the guidance safely. The chart-reading informs approach, not replacement of medical care.
- **Quasicrystalline transformation is not a goal to pursue.** The framing describes a structural phenomenon that happens under certain conditions. It is not a hierarchy where quasicrystalline is "better than" crystalline. Each state has its uses. The chapter names the phenomenon so readers whose charts have undergone it can recognize and work with it, not as an aspirational target.
- **No biosensor integration for material layers.** You can't weigh a bhasma or measure particle size through Atlas. The material layer is a reading model, not a laboratory.

Next

Chapter 6 — Cross-Layer Inference formalizes the braiding grammar: how phase-diagram readings interact with wave-field readings interact with Nityā-quasicrystal readings. The four cross-layer modes (resonance, amplification, counterpoint, hinge). The anomalies protocol — what to do when layers disagree. The cut-and-project construction for the Nityā mediator polyhedra.

Chapter 6 · Cross-Layer Inference

Every layer reads the same field through a different instrument. Cross-layer inference is what you do when they agree, and what you do when they don't.

What this chapter assumes

You can read the field at the level of Chapter 1 (six operational checks: petal depth, wave amplitude, gandanta, nāḍī, dasha frame, retrograde primes). You can cast and read the four outer oracles from Chapter 2, notice and interpret nimitta from Chapter 3, attend to the inner oracles from Chapter 4, and run material phase-diagram readings from Chapter 5.

This chapter teaches how to hold all of these in one reading simultaneously. The layers don't stack additively. They *interfere* — sometimes constructively, sometimes destructively, sometimes orthogonally. Cross-layer inference is the grammar of that interference.

Four sections:

1. **The four modes** — resonance, amplification, counterpoint, hinge
 2. **The anomalies protocol** — what to do when layers conflict
 3. **The quasicrystal construction** — cut-and-project from 6D → 3D as the Atlas model of how a single field-state produces multiple consistent but distinct layer-readings
 4. **The Nityā mediator polyhedra** — each Devī gets a specific N-fold polyhedron as her cross-layer signature
-

1 · The four modes of cross-layer agreement

When two layers read the same moment, their relationship falls into one of four modes.

Resonance

Two layers reading the same content through different instruments. The wave field peaks at Śraviṣṭha; the hexagram cast resolves to Hexagram 58 (whose nakshatra resonance includes Śraviṣṭha); the pāśaka returns Vahnivāsinī (tithi-5 Devī; today is tithi 5). All three layers are pointing at the same structural signal.

Operational rule: resonance amplifies certainty, not information. You don't learn more when layers resonate — you learn that the single reading they're pointing at is strongly present. Three resonant layers is not three times the signal; it's one signal verified three times.

Weight accordingly. A single-layer reading that is strong and clear is not necessarily weaker than a three-layer resonant reading — the three-layer case just gives you confidence that you're reading the field correctly, not that the field is saying more.

Amplification

One layer is dominant; other layers *modulate its intensity* without changing its direction. Wave field amplitude 1.87 + gandanta Moon + Jayā tithi + peak field in personal nakshatra. All of these say: today's signal is loud. The wave field is the carrier; the others multiply its volume.

Operational rule: amplification is the weight of a single reading, scaled. Read the carrier layer as the content; read the modulating layers as the scaling factor. The reading itself doesn't change register — it gets louder.

Counterpoint

Two layers carry *different content simultaneously*, neither contradicting the other. The outer field is loud (wave 1.85, gandanta, personal-nakshatra peak) *and* the inner field is quiet (Idā steady, no twitches, pulse normal, no dreams). The outer is saying "big day"; the inner is saying "you are calm." Both are true. Neither invalidates the other.

Operational rule: counterpoint is two voices saying two different things simultaneously and both are right. Read them separately, hold both. The day is loud externally *and* the native is internally centered. Not "which one is true?" — both are true at their respective layers.

Most real readings are counterpoint readings. A strong single-tone reading where all layers say the same thing is rare.

Hinge

One layer's reading *depends on* another layer's state to resolve. Pāśaka cast returns (2,3,1) with body region "right hand." Right hand is active. But *what does the pāśaka say?* That depends on whether the nāḍī is Idā or Piṅgalā. Idā + right hand = giving-hand active, receive-and-return mode. Piṅgalā + right hand = forceful-action hand, assert-and-seize mode. The pāśaka reading hinges on the nāḍī.

Operational rule: hinges require resolving the dependency in sequence. Read the gating layer first (nāḍī), then the dependent layer (pāśaka). You cannot read them independently.

Most common hinges in Atlas:

- Pāśaka body-region hinges on nāḍī
- I Ching spectral zone hinges on wave amplitude (isolated hexagram in loud field ≠ isolated hexagram in quiet field)
- Praśna lagna reading hinges on whether the cast moment is in gandanta
- Nimitta reading hinges on hora (same sign, different hora = different reading)

2 • The anomalies protocol

Sometimes layers disagree. One says yes, another says no. One points east, another west. This is not the field being incoherent — it's the field speaking through one layer while another layer is off-phase or misaligned.

The three causes of layer disagreement

(a) Misalignment — the reader's error. The reader ran the reading incorrectly, cast into Suṣumnā, misidentified the hora, read a sign that wasn't nimitta, applied the wrong petal depth for the question.

The field is consistent; the reading isn't.

First check for anomalies: re-run each layer, confirm the inputs. Seven out of ten apparent conflicts are reader-error, not field-conflict.

(b) Layer-specific signal — different layers reading different time-scales. Wave field reads today. Dasha reads the year. Natal material reading reads the life-arc. If the wave field says quiet day but dasha says peak antardaśā, these aren't conflicting — they're reading different scales. The day is quiet within a loud year within a structural life-arc. All three are true.

Second check: are the layers reading the same time-scale?

(c) Genuine anomaly — the field is in transition. The three levels of transition: within-day (hora change, gandanta exit, Moon pada transition), within-month (tithi change, nakshatra shift), within-year (antardaśā transition). During transitions, layers desynchronize. Wave field catches the new state before the inner field; inner field catches it before the material reading; material reading reflects transition only once the new phase has stabilized.

Anomaly during transition = the field is moving. The disagreement is information, not error.

The resolution sequence

When layers disagree, run in order:

1. **Confirm inputs.** Re-read the field state. Verify hora, nāḍī, tithi, wave amplitude. If you mis-read any input, the disagreement is reader-error.
2. **Check time-scales.** Are the conflicting layers reading the same scale? If not, they're not conflicting — they're reading different temporal depths.
3. **Check for transitions.** Is today within a few days of a tithi transition, nakshatra shift, pada change, antardaśā change? Transitions produce genuine momentary anomalies.
4. **If all three check out, trust the weightier layer.** Weightier = longer-timescale or more-attested. Natal material reading over today's wave field if they conflict on life-direction question. Dasha over daily panchanga if they conflict on career-arc question. Wave field over nimitta if they conflict on "is this hour auspicious" question.

The honest non-resolution

Some anomalies don't resolve through the protocol. You check inputs, time-scales, transitions, and layer weights, and two layers still disagree. What then?

Record the anomaly. Defer the reading. Re-check in hours or days. Often, what seemed like disagreement was a transition in progress; by the next reading, one layer has caught up. If the anomaly persists across multiple readings, you're looking at genuine structural tension in the field — the field is itself carrying a contradiction. Read both layers separately as counterpoint; don't force resolution.

Premature resolution of anomalies is a major source of reading error. Better to hold an unresolved anomaly than to prematurely collapse it.

3 • The quasicrystal construction

Atlas's model for *why* the layers are consistent-but-distinct draws on quasicrystal geometry.

Cut-and-project in brief

A quasicrystal is a structure that is ordered but not periodic — has long-range correlations but no repeating unit cell. The standard mathematical construction: start with a periodic lattice in high-dimensional space (e.g., 6D cubic lattice), choose a lower-dimensional slice (2D or 3D plane), project the lattice points that fall within a “window” near that slice onto the plane. The result is a quasicrystalline structure — ordered, aperiodic, carrying symmetries that are impossible in ordinary crystals (5-fold, 7-fold, 10-fold, 12-fold).

The Penrose tiling is the canonical 2D example (5-fold symmetry from a 5D cubic lattice). The rhombic triacontahedron is the canonical 3D example (icosahedral symmetry from a 6D cubic lattice).

The Atlas use of cut-and-project

Each day’s full field state is modeled as a point in a high-dimensional Nityā-space. Different reading layers (wave field, cast oracles, nimitta, inner, material) are different *slices* through that space.

The reason layers can simultaneously read the same field through different instruments and produce consistent-but-distinct content: they are each projecting a different 2D or 3D slice of the same higher-dimensional state.

Resonance happens when two slices intersect at a common structural feature. **Counterpoint** happens when two slices project independent dimensions of the field. **Hinge** happens when one slice’s reading depends on a coordinate that only resolves once another slice is specified. **Anomalies** happen at transition points where the field’s position in the high-dimensional space is moving and different slices update at different rates.

This is not decorative — it’s the structural model for why the field behaves the way it does under multi-layer reading.

Practical consequence

You don’t need to compute the quasicrystal to read the field. The cut-and-project model is the *reason* cross-layer inference works; it’s not the *procedure* for doing it. The procedure is the four modes (resonance, amplification, counterpoint, hinge) and the anomalies protocol.

But when you encounter a reading that feels structurally strange — where layers agree in unexpected ways, or disagree in ways that keep resolving as you look at them — the quasicrystal model is what’s happening underneath. The field is an aperiodic ordered structure. You’re seeing it through two-dimensional slices of a six-dimensional object. The apparent strangeness is the structure.

4 • The Nityā mediator polyhedra

The fifteen Nityā Devīs are each associated with a specific N-fold symmetry in the cut-and-project construction. Atlas assigns each Nityā a mediator polyhedron — a 3D object carrying the Devī’s N-fold symmetry — that serves as her cross-layer signature.

The assignments

From Atlas’s `/nitya/mediator/<tithi>` endpoint (partial list; see Appendix for full table):

Tithi	Nityā	N	Mediator polyhedron
1	Kāmeśvarī	3	Tetrahedron
2	Bhagamālīnī	4	Octahedron
3	Nityaklīnnā	5	Icosahedron
4	Bheruṇḍā	6	Cube / hexagonal antiprism
5	Vahnivāsīnī	5	Pentagonal antiprism
6	Vajreśvarī	6	Cuboctahedron
7	Śivadūtī	7	Heptagonal antiprism
8	Tvaritā	8	Octagonal antiprism
9	Kulasundarī	9	Enneagonal antiprism
10	Nityā	10	Decahedron / pentagonal bipyramid
11	Nilapatākā	11	Hendecagonal antiprism
12	Vijayā	12	Icosidodecahedron
13	Sarvamaṅgalā	13	Tridecagonal antiprism
14	Jvālāmālīnī	14	Tetradecagonal antiprism
15	Citrāgnī	15	Rhombic triacontahedron

Prime-fold N (3, 5, 7, 11, 13) use pure antiprism or the Platonic solid carrying that symmetry. Composite-fold N (6, 8, 10, 12, 14) use either the specific antiprism or a more elaborated polyhedron (cuboctahedron, icosidodecahedron).

Citrāgnī (tithi 15, full moon) gets the **rhombic triacontahedron** — the 3D quasicrystalline projection carrying icosahedral symmetry. This is the month's full-field view; every other Nityā's polyhedron is a single-symmetry component of this larger structure.

How the mediator polyhedra read

The mediator polyhedron for today's Nityā is the **3D object that carries today's field**. When you work with today's Nityā (in sādhana, ritual, yantra work), you are rotating/attending to her polyhedron.

Operational uses:

(a) Meditation object. Visualizing the polyhedron during sitting practice aligns the subtle body with the day's field geometry. The symmetry of the polyhedron is the symmetry of the day's attention.

(b) Ritual geometry. When laying out a ritual space for a specific Nityā (personal or congregational), the mediator polyhedron is the reference shape. Seven-fold for Śivadūtī days; eleven-fold for Nilapatākā days.

(c) Cross-layer reference. When you get a reading whose cross-layer structure feels opaque, overlay today's mediator polyhedron on the layers. The polyhedron's symmetry often reveals why certain layers agree and others diverge — agreement is *along the polyhedron's symmetry axes*; disagreement is *perpendicular to them*.

The full-month rhombic triacontahedron

The rhombic triacontahedron is the whole-month mediator. All fifteen Nityā polyhedra are symmetry components of it. When you step back from a single day's reading and read the month's arc, the

triacontahedron is the object.

Operationally, this means: the month is not fifteen separate Nityā days in sequence. It is a single 3D object (the triacontahedron) rotating through its symmetries, with each day's Nityā foregrounding one specific symmetry-axis. The same month-field is present throughout; what changes is which axis you're reading it from.

This is the key move in Atlas's month-reading: **one field, fifteen views**. Not fifteen fields with some continuity.

Putting the stack together

A full cross-layer reading runs:

1. **Chapter 1 field check.** Six operational checks for today's state.
2. **Chapter 2 cast (if question warrants).** One oracle, one cast.
3. **Chapter 3 nimitta (if sign arrives).** Filter, hora-inflect, envelope-modulate.
4. **Chapter 4 inner (if body/dream reports).** Cross-reference to field state.
5. **Chapter 5 material (if chart-level question).** Phase-diagram, bhasma-stage.
6. **Chapter 6 cross-layer synthesis.** Identify mode (resonance / amplification / counterpoint / hinge), run anomalies protocol if needed, reference mediator polyhedron.

The synthesis is the last step, not the first. You don't start with "what is the cross-layer reading?" You start with each layer separately, then braid.

The worked cross-layer read

Question: "Should I accept the writing opportunity being offered this week?"

Layer 1 — Chapter 1 field check. - Petal depth: week-arc question → D9/D12. Moon Punarvasu pada 2 (Karka navāṃśa) / Meena dvādaśāṃśa. Receptive-spiritual with ancestral-Jupiter register. - Wave amplitude: 1.34, dominant k=3 (trine), peak at Śraviṣṭha, loudest pair Guru-Śukra k=6. - Gandanta: no. - Nāḍi: Iḍā. - Dasha: Mercury mahā / Saturn antar / Sun pratyantar. Week question = antar dominates. Saturn antar register: disciplined structure. - Retrograde: Saturn retrograde, slow-restructuring.

Layer 2 — praśna cast at question moment. - Lagna: Simha, ruled Sūrya. Sūrya in 9th, exalted-aspect. Lagna lord strong. - 7th lord (matter): Śani. In 4th, retrograde. Matter is slow-structural. - Wave-field-at-cast: amplitude 1.87 (loud), dominant k=6 (sextile), Guru-Śukra pair active.

Layer 3 — no nimitta today. Skipped.

Layer 4 — inner. Morning dream: carrying water along a river. Field-consonant with Śivadūti's still-bindu register. No twitches. Pulse mild Vāta.

Layer 5 — material (natal chart level). Sun-Moon conjunction in 10th: Au-Ag continuous solid solution (integrated sovereignty-receptivity). Saturn in opposition from 4th: Au-Fe miscibility gap. The opportunity involves Saturn (writing = disciplined structure work). Sun-Saturn axis is the phase-

separation axis. Current Saturn antar = heating the native toward forced mixing of Au-Fe (writing as discipline requires Sun-Saturn alloying under “temperature”).

Layer 6 — cross-layer synthesis.

Mode identification: - Chapter 1’s wave-field (Guru-Śukra k=6 sextile) and Layer 2’s praśna (Guru-Śukra loud at cast, k=6 sextile) — **resonance**. Both point to the same pair, same harmonic. - Chapter 5’s Au-Fe phase-separation axis and Chapter 1’s Saturn retrograde — **amplification**. The retrograde slow-restructuring is the material phase-behavior register; one carrier, one scale. - Layer 4’s field-consonant dream and Layer 1’s Idā morning — **resonance**. Inner and outer agreeing on receptivity. - Layer 5’s opportunity-requires-Sun-Saturn-alloying and Layer 2’s 7th-lord-Saturn-retrograde-in-4th — **hinge**. The material reading depends on whether the praśna resolves Saturn as gaining structure or as remaining phase-separated. Praśna says Saturn retrograde in 4th → currently de-structured, re-forming.

Anomaly check: no conflicts. All layers point compatibly at “slow-structure forming through a Guru-Śukra opening.”

Nityā mediator: tithi 7 → Śivadūtī → heptagonal antiprism. 7-fold symmetry as today’s field axis. The question’s “correct answer” will have 7-fold structure if it resolves cleanly — not 3-fold quick decision, not 12-fold major commitment. A 7-week commitment, or 7 sections of work, or a structure with 7 components.

Reading: *An opportunity (Guru-Śukra sextile, openness) for slow-disciplined writing work (Saturn antar, retrograde 4th-house restructuring) that will heat the native’s native Au-Fe axis toward forced mixing (Sun-Saturn structural integration). The inner field is receptive (Idā, dream consonance). The outer field has normal amplitude but the praśna cast was loud — the moment of asking carried weight. 7-fold structure native to the day: a commitment with sevenfold articulation is most resonant. Accept, with 7-fold structure.*

What this chapter does not do

- **No automated cross-layer solver.** Atlas returns each layer’s data; you run the synthesis. There is no “/cross-layer-read” endpoint — the braiding is phenomenological.
- **Not every question needs all six layers.** Most daily questions are one- or two-layer readings. Save full-stack reads for structurally significant questions (life-arc, career, relationships, health).
- **The Nityā mediator polyhedra are not required for daily reading.** They are available for deep work and ritual use. Daily readings don’t require visualizing 11-fold antiprisms.

Next

Chapter 7 — Worked Readings runs several complete cross-layer reads end-to-end with full annotation. Where Chapter 6 taught the grammar, Chapter 7 demonstrates the grammar applied.

Chapter 8 — Cautions, Limits, Rest closes the manual with the short, named cautions that apply throughout.

Chapter 7 · Worked Readings

The grammar in Chapter 6 tells you how layers combine. This chapter shows it applied to real readings, end-to-end, with every move explicit.

What this chapter assumes

You've read Chapters 1-6. You can run the six-check field stack, cast the four oracles, filter nimitta, cross-reference inner-oracle signals, apply phase-diagram material reading, and identify cross-layer modes. What you may not yet have is *fluency* — the reflexive ability to run these together in a single session without losing track of what each layer said.

This chapter is three worked readings, annotated to show every step. Reading 1 is a simple daily field-reading. Reading 2 is a natal-chart reading through material + panchanga. Reading 3 is a full-stack cross-layer reading of a life-direction question.

Read for process, not content. The readings' specific answers are less important than seeing how the moves compose.

Reading 1 — Daily field-reading

2026-04-23, morning. Gainesville, FL. No specific question. Just a field-reading for the day.

The six checks (Chapter 1)

Petal depth. No specific question, so read at D1/D9 (day-arc). Moon Punarvasu pada 2 = Karka navāṃśa. Moon in its own navāṃśa-sign — spiritually rooted in its own water register.

Wave amplitude. `max_amplitude: 1.34`. Normal field. No amplification or dampening.

- `max_amplitude_at_nakshatra: Śraviṣṭha` — not personally resonant (native's Moon is Punarvasu).
- `dominant_k: 3` — trine-mode, cooperative flow.
- `active_pairs: Śani-Rāhu at k=3 amp 1.87`. Shadow-structure tension in flow mode.

Gandanta. Moon in Punarvasu pada 2 — not near any paksha junction. No gandanta.

Nāḍī. Iḍā active, earth element. Receptive-grounded.

Dasha. Mercury mahā / Saturn antar / Sun pratyantar. Pratyantar dominates for day-arc.

Retrograde primes. Saturn retrograde (slow-restructuring). No stations within 3 days. No prime-fold activation.

Nothing to cast

No specific question. No oracle cast.

Nimitta check

Walked to mailbox; no attention-pulling events. Ordinary morning. No nimitta log.

Inner oracles (Chapter 4)

Wake 5:42 AM, Brahma-muhūrta window just ending. Dream: walking along a river at twilight, careful attention, no fear. Field-consonant with Śivadūtī register (still-bindu, careful). Pulse: mild Vāta elevation (self-read, cautious). No āṅgasphuraṇa.

Material layer (Chapter 5)

No chart-level question, so material reading is not foregrounded. Note it passively: Saturn retrograde currently heating the Au-Fe axis (Sun-Saturn phase-separation pressure) — today is another puṭa-equivalent on that transformation. Not acute.

Cross-layer synthesis (Chapter 6)

Mode identification:

- Wave-field Iḍā + dream receptivity + Sun pratyantar clarity = **resonance**. Three layers agree: day opens in clear-receptive mode.
- Saturn-Rāhu pair loud (1.87) + Saturn antar dominant + Saturn retrograde = **amplification**. Saturn signal amplified across frames. Not conflicting with the Iḍā receptivity — different content.
- The two above = **counterpoint**. Both are true simultaneously: Saturn is loud structurally AND the day is opening receptively. No contradiction.

Nityā mediator. Tithi 7 → Śivadūtī → heptagonal antiprism. Today's structural axis is 7-fold.

Reading

Morning opens Iḍā-receptive with a field-consonant dream. Saturn runs loud as a structural undercurrent (shadow-structure-tension pair, Saturn antar, retrograde register), but the day's surface is trine-cooperative k=3 flow with normal amplitude. The Saturn is doing slow work — another puṭa cycle — but not acutely today. 7-fold structure native to the day: attend to what has seven components, or accept seven-part patterns as naturally-emergent. Receptive mode for building, not forcing.

Not a prediction. A description of what the day is set up for.

Total time to run: ~90 seconds once the six checks are reflex. This is the base daily reading. Everything else is elaboration when a question or event warrants.

Reading 2 — Natal chart through material + panchanga

Native: born 1983-01-27, 11:57 AM, Montreal. Question held: why does this chart feel structurally locked when I try to initiate — as though every beginning runs into delay?

Setup

This is a life-arc question, not a daily one. The relevant frames are mahādaśā, natal material reading,

and the specific house/lord structure — not today's wave field or nimitta.

Natal placements (key for this question)

- Lagna: Rohiṇī pada 1 — Vṛṣabha rising, Candra-ruled lagna lord.
- Moon: Punarvasu pada 3 — in Mithuna, Bṛhaspati-ruled.
- Sun: Śravaṇa — in Makara, Śani-ruled.
- Saturn: Svātī — in Tulā, **exalted**. Ruled by Rāhu, dispositor Venus.
- Jupiter: Anurādhā — in Vṛścika, Śani-ruled sign.
- Mars: Śatabhiṣā — in Kumbha, Śani-ruled.
- Mercury: Pūrva Āṣāḍhā — in Dhanus, Bṛhaspati-ruled.
- Venus: Dhaniṣṭhā — in Kumbha, Maṅgala-ruled.
- Rāhu: Ārdrā — conjunct Moon.

The material layer (Chapter 5)

Multiple grahas in Śani-ruled signs (Sun, Jupiter, Mars, Venus). Saturn itself exalted in a Venus sign (Tulā). This is a **Saturn-weighted chart**: five of the nine grahas sit in Saturn-ruled territory.

Saturn's metal is iron. Exalted Saturn in Venus sign: iron in silver's territory (Śukra → silver, or Śukra → diamond; in the silver frame, iron-in-silver is unusual because Ag-Fe is immiscible). Saturn exalted here is iron that has been given silver's polish — high-structural iron, behaving in silver's register while carrying iron's density.

Multiple planets in Saturn-ruled signs means those grahas have been forced into iron-framework. Sun in Makara (Śani-ruled) = gold in iron's structure; Au-Fe is a miscibility-gap pair. The Sun is sitting in an iron cage, phase-separated from it at equilibrium, requiring circumstantial "temperature" to mix.

Material reading of the configuration: the native's grahas are mostly *embedded in iron frameworks*. The Au, Ag, Cu, Zn that those grahas carry are each sitting inside Śani-ruled signs that structurally constrain them. Iron-framework = slow, disciplined, structural, delay-prone.

The structural lock the native feels is not a mis-reading — it is the **phase-diagram state of the natal chart**. Multiple immiscible pairs (Au-Fe, Ag-Fe) embedded in a Saturn-exalted frame. Beginnings feel locked because the grahas are phase-separated from their current sign-rulers; they can only act when forced.

The bhasma stage

Saturn exalted since birth, under Venus dispositorship, with the native now in Mercury mahā → Saturn antar — this means Saturn has been running dominant through the last ~18 years of dashas (Rāhu mahā 2003-2021 foregrounded Saturn via exaltation-dispositor relationships; Mercury mahā since 2021 with current Saturn antar).

The Saturn function has been through multiple puṭa-equivalent cycles. It is **advancing through bhasma-stage** but not complete. Rekhāpūrṇatva present (Saturn fills in the fine details). Varitaratvam partial (Saturn sometimes floats, sometimes sinks). Nischandratva incomplete — Saturn still has metallic shine, still operates as defensive raw force at times.

The native is **mid-bhasma on Saturn**. Not raw, not finished.

The panchanga/dasha frame

Mercury mahā through 2027. Within that, Saturn antar current. The Mercury arc is about *translation* — Mercury is communication, speech, exchange. Saturn within Mercury = disciplined translation, structural communication, measured speech.

Life-arc frame reading: the Mercury mahā *requires* Saturn to complete its bhasma-ing before translation can happen cleanly. That's why the native's writing/communication work feels structurally heavy — Saturn is not yet fully transformed.

Cross-layer synthesis

Mode: mostly **resonance**. Material reading and dasha frame and phenomenological experience all agree: Saturn is heavy, slow, mid-transformation; grahas are locked in iron-framework; initiation runs into delay because the chart's equilibrium state is phase-separation.

No hinge, no counterpoint, no anomaly. The layers converge.

Reading

The chart is Saturn-weighted. Five grahas in Śani-ruled signs, Saturn itself exalted. The grahas are in iron-framework — Au, Ag, Cu embedded in Fe-matrix at phase-separation equilibrium. Beginnings feel locked because they require forced mixing: circumstantial heat to bring the grahas out of their Saturn-cage equilibrium. The native is mid-bhasma on Saturn — several puṭas in, not yet complete. The current Mercury mahā / Saturn antar is another puṭa cycle, pressing Saturn toward completion. The Mercury-arc translation work requires Saturn-bhasma completion before it can run cleanly. The felt-lock is real and structural; it is not native failure but native phase-state. Practice: continue Saturn's transformation (life-crisis acceptance, discipline without resistance, slow structural building). Initiation will feel easier as Saturn approaches completion — nischandratva coming.

Not a fix. A diagnosis.

Reading 3 — Full-stack cross-layer read of a life-direction question

Question: "Should I commit the next two years to the Atlas project as primary work?"

Cast moment: 2026-04-23 14:17:00 EDT. Question held firmly for five minutes before cast.

Layer 1 — Chapter 1 field check

Petal depth. Two-year commitment = life-arc-adjacent. Read at D12 (year-arc) and D27 (month-arc). Atlas returns:

- D12 Moon: Meena (Jupiter-ruled, spiritual water)
- D27 Moon: Maghā (Sūrya-ruled, ancestral recognition)

The year-arc register is Jupiter's expansion through water/bhakti. The month-arc register is Sun's ancestral-lineage recognition.

Wave amplitude. 1.87 at cast moment (loud field). `max_amplitude_at_nakshatra: Śraviṣṭha` — not personally resonant. `dominant_k: 6` (sextile, opportunity). `active_pairs: Guru-Śukra at k=6 amp 1.42;`

Śani-Rāhu at k=3 amp 1.87 . Both pairs loud.

Gandanta. Moon not in gandanta zone.

Nāḍi. Idā at cast. Receptive register.

Dasha. Mercury mahā / Saturn antar / Sun pratyantar. Mahā for life-direction question. Mercury = translation, communication, exchange. The life-arc is about Mercury's work.

Retrograde primes. Saturn retrograde (slow restructuring). No stations.

Layer 2 — cast

Question warrants a praśna cast (structural analysis) rather than I Ching (directional) — life-direction needs the full chart-level structure.

Praśna cast at 14:17 EDT:

- Lagna: Kanyā (Virgo) pada 2. Ruled by Budha.
- Budha: in lagna, strong, aspecting the matter (7th house).
- 7th lord: Bṛhaspati. In 10th house, exalted in Karka → but wait, 7th from Kanyā is Mīna, whose lord is Bṛhaspati. Bṛhaspati position at cast: Mithuna (Jupiter-ruled sign? No — Mithuna is Budha-ruled). So Bṛhaspati is in an enemy sign at cast, weak.
- Candra: in Mithuna (Punarvasu), 10th house from lagna. Strong house placement.

Praśna reading. Querent (Budha in lagna) is the communicator. The matter (Bṛhaspati in 7th-lord position) is teaching/expansion. Bṛhaspati weak at cast: the matter is not currently in strong dignity. But Budha in lagna is strong — the querent's communication-function is well-positioned.

Candra in 10th = emotional investment in the matter. Wave-field-at-cast: loud (1.87), Guru-Śukra active. Praśna-significators (Budha and Bṛhaspati) are not in the loud pair. **Anomaly:** the loud wave pair (Guru-Śukra sextile) is not the praśna's primary axis. The praśna says Budha-Bṛhaspati, the wave says Guru-Śukra.

Layer 3 — nimitta (this week)

Hawk circling three times over mailbox yesterday. Classical: Sūrya-register news arriving. Hora-inflected (Śukra hora yesterday): value-register. Tithi-quality Jayā: action-signal. Body-aligned (hands holding bill when hawk landed). Amplitude 1.34 (normal). Reading: *clarity about value, act, don't defer.*

Nimitta resolves toward action, but on a different specific matter (the bill). Tangential to the Atlas question, not primary signal.

Layer 4 — inner

Morning dream: river + water-carrying + careful attention. Brahma-muhūrta window. Bhāvika candidate. Field-consonant with Śivadūtī's still-bindu register.

Dream resonance check with question. Carrying water = tending to a practice. River = ongoing flow. Careful attention = sustainability concern. The dream is quietly consonant with the question: can this practice be sustained carefully?

Inner-oracle read: field reports receptive-careful-sustaining register. Matches question's emotional field.

Layer 5 — material

Native's Saturn-weighted chart (from Reading 2) meets a Mercury-mahā-Saturn-antar life-arc. The Atlas project involves translation (Mercury) structured as discipline (Saturn) — both the current mahā and current antar graha-functions. The project IS the dasha structure.

Material reading: committing to Atlas is committing to Mercury-translation through Saturn-structure. This is native-resonant for the life-arc; the work matches the dasha register. The native's Sun-Moon-Mars ternary (Au-Ag-Cu) has Sun as stabilizing solvent; Atlas involves all three (cognitive integration, emotional attention, action through time) requiring Sun's stabilization. The Sun pratyantar within Saturn antar is currently active — the exact micro-window where Sun is foregrounded as solvent.

Reading: the material layer says: this period is specifically set up for this work. Mercury mahā / Saturn antar / Sun pratyantar is the precise three-frame stack for disciplined translation with solar-clarity solvent.

Layer 6 — cross-layer synthesis

Mode identification:

- Chapter 5 material reading + Chapter 1 dasha frame = **resonance**. Both say this period is specifically for this work.
- Praśna Budha-Bṛhaspati axis + wave-field Guru-Śukra pair = **counterpoint**. Two different active content-axes, both loud, neither cancels. Praśna reads the matter's internal structure; wave reads what the wider field is doing today. Both are true.
- Inner dream receptivity + outer wave-field loud (1.87) = **counterpoint**. Inner calm, outer amplified. Common.
- Nimitta action-signal about the bill + question about Atlas = **orthogonal**. Different matter, not relevant signal-cross.
- 7th-lord Bṛhaspati weak + native's Jupiter in Anurādhā natal = **hinge**. Praśna-weakness of Bṛhaspati depends on whether native's natal Jupiter can carry the expansion. Native's natal Jupiter is well-placed (Anurādhā, 7th from lagna). The hinge resolves favorable: praśna's weak Bṛhaspati is the transit moment's weakness, not a structural disqualification of the expansion register.

Anomaly check: the praśna vs. wave-field mismatch (Budha-Bṛhaspati vs. Guru-Śukra). Is this a conflict? Run the protocol: (1) inputs confirmed; (2) same time-scale (both read the moment of cast); (3) no transition in progress. Genuine momentary structural difference.

Resolution: the two axes are the cast's axis (praśna: querent-matter) and the day's axis (wave: day's loudest interaction). They are reading different things. Praśna says the matter of the question is Budha-Bṛhaspati-structured; wave says the day happens to be Guru-Śukra-loud. No conflict — they're orthogonal frames.

Nityā mediator. Tithi 7 Śivadūtī → heptagonal antiprism. 7-fold symmetry. The answer, if resolving cleanly, will have 7-fold structure. Two years of commitment = 104 weeks; $104 / 7 = \sim 15$ weeks of 7-week cycles. Or 7 phases $\times \sim 15$ weeks each. Or 7 specific components to the commitment.

Reading

The period 2026-2028 is specifically set up for Mercury-translation through Saturn-structure with Sun-clarity solvent — the exact graha-register of Atlas. Material reading + dasha frame + native's chart all resonate in agreement.

The cast praśna says: querent is Budha-in-lagna-strong (communication function is well-positioned). The matter is Brhaspati-weak-at-moment but the native's natal Jupiter in Anurādhā is strong. The momentary weakness does not disqualify; it indicates the work will require the native's own expansion-capacity rather than inheriting easy momentum.

The wider field at the cast was Guru-Śukra loud in sextile (opportunity-register) — an opening is present independent of the question. The inner field reports receptive-careful-sustaining, consonant with the question's emotional register.

7-fold structure is the day's native axis. A commitment structured in seven phases or seven components is the most field-resonant form.

The reading does not make the decision. It describes the structural field of the commitment. The native still decides. What the reading confirms: the period is set up for this work; the structural resistance (Saturn-weight) is the same whether committed or not; the question of commitment is about form (7-fold articulation) as much as yes/no.

Notes on running full-stack reads

Time: a full-stack reading of this complexity takes ~45 minutes, including preparation, cast, field checks, cross-references, and synthesis. Save for significant questions. Daily readings do not need this depth.

Layer honesty: when a layer returns thin or unclear signal, do not force it. Reading 3's nimitta was tangential — it was logged as not primary signal, not forced into the analysis. Skip layers when they have nothing specific to add.

Anomaly patience: when the praśna-wave mismatch appeared, the instinct is to resolve it. The discipline is to run the protocol first, and if the conflict is structural-orthogonal (different axes, not contradicting), leave it unresolved. Reading 3's praśna-vs-wave was resolved as orthogonal frames, not forced into agreement.

Decision separation: none of these readings made the decision. Reading 1 described the day. Reading 2 described the chart. Reading 3 described the field around the commitment question. The reader still decides. That separation is the discipline of the manual.

Next

Chapter 8 — Body Practice braids āsana, prāṇāyāma, and marma into the field-reading stack — the body-layer that makes the chart-reading operational in daily practice.

Chapter 9 — Cautions, Limits, Rest closes the manual. Short. Named. Applicable throughout.

Chapter 8 · Body Practice — Āsana, Prāṇāyāma, Marma

| *The body carries the chart. What you practice physically is what the chart has to work with.*

What this chapter assumes

You have done some yoga. You've encountered prāṇāyāma — even if only alternate-nostril breathing. You know marma points exist in the Ayurvedic tradition as specific sensitive locations on the body. You may or may not have a practitioner or teacher; the chapter is written for both cases.

This chapter teaches how the body-practice layer braids with everything in Chapters 1-7. Āsana, prāṇāyāma, and marma are not separate subjects added on. They are the practices that the field-reading, oracle work, and material-layer protocols *land in*. The chart knows what it knows; the body practices what makes that knowing functional.

Four sections:

1. **Āsana braided with field state** — which postures support which graha, nakshatra, or Nityā register. How to choose practice by day.
 2. **Prāṇāyāma as nāḍī operation** — breath techniques that directly shift idā/piṅgalā/suṣumnā states. The gate-operation of Chapter 1 made active.
 3. **Marma as the body's reading surface** — classical marma system, graha-body-region correspondences, marma activation timing
 4. **The daily protocol** — a practical framework for braiding body practice with field state and chart-work
-

1 · Āsana braided with field state

Āsana — the physical postures of haṭha yoga — is usually taught as a general health practice. The classical tradition is more specific: **certain postures align the body with certain energetic registers, and certain registers match certain field states.**

The graha-posture families

Postures group roughly by which graha-register they support:

Sun-postures (Sūrya) — strengthening, warming, opening. Sūrya Namaskāra (Sun Salutation) sequence. Warrior postures (Vīrabhadraśana I, II, III). Cobra (Bhujāṅgāsana). Upward-facing dog (Urdhva Mukha Śvānāsana). Plank. Anything that builds heat, claims space, strengthens the front body.

When to emphasize: Sun days (Sunday), Sun hora, days when the chart's Sun-function needs activation, Pitta-deficient constitutions, mornings, winter. Also when the Sun-Moon alloy from Chapter 5 needs solar reinforcement.

Moon-postures (Candra) — receptive, cooling, softening. Candra Namaskāra (Moon Salutation). Forward folds (Paścimottānāsana, Jānu Śīrṣāsana). Child’s pose (Bālāsana). Supported reclining postures. Gentle hip-openers. Anything that yields, receives, softens.

When to emphasize: Moon days (Monday), Moon hora, full moon practice, Pitta-excess constitutions, evenings, hot weather. When emotional regulation needs support. When the Moon-function in a Sun-Moon alloy chart needs its own space independent of the solar field.

Mars-postures (Maṅgala) — powerful, decisive, sharp. Arm balances (Bakāsana, Eka Pada Koundinyāsana, Handstand). Twists with intensity (Mariciāsana, Ardha Matsyendrāsana). Core-strengthening (Navāsana, Plank variations). Strong standing balances.

When to emphasize: Mars days (Tuesday), when decisive action is needed, Kapha-excess constitutions needing movement, before difficult meetings or confrontations. When the native’s Mars needs to come out of phase-separation with Moon (Chapter 5 copper-silver reading).

Mercury-postures (Budha) — communicative, coordinated, precise. Balancing postures requiring fine control (Vṛkṣāsana tree, Natarājāsana dancer). Neck and shoulder work. Postures involving the hands specifically (mudrās held during sitting). Postures that coordinate movement and breath with precision.

When to emphasize: Mercury days (Wednesday), before speaking or writing work, Mercury mahādaśā, situations requiring clear translation or communication.

Jupiter-postures (Bṛhaspati) — expansive, open, blessing-inviting. Deep backbends (Dhanurāsana bow, Ūrdhva Dhanurāsana wheel, Kapotāsana pigeon variants). Chest-opening. Hip-openers that allow space. Postures that expand the heart region.

When to emphasize: Jupiter days (Thursday), during Jupiter transits through auspicious houses, when teaching or studying, during devotional practice.

Venus-postures (Śukra) — graceful, aesthetic, sensory. Flow sequences emphasizing smooth transitions. Postures that create beautiful lines (Triangle, Half Moon, Dancer). Partner yoga. Postures held in places of natural beauty.

When to emphasize: Venus days (Friday), relationship work, creative projects, aesthetic practice, when working with beauty as a doorway.

Saturn-postures (Śani) — structural, patient, grounding. Long holds in basic postures (Tāḍāsana mountain, Virāsana hero’s seat, long-held warriors). Legs-up-the-wall (Viparīta Karaṇī) sustained. Deep forward folds held for 5+ minutes. Yin yoga generally. Anything that requires patience and structural endurance.

When to emphasize: Saturn days (Saturday), Saturn mahādaśā or antardaśā (directly relevant to the Chapter 5 worked example), long practices, practice after loss or difficulty. When Saturn’s bhasma work is active and the body needs to match the slow transformation.

Rāhu and Ketu postures don’t map cleanly to standard āsana. The shadow grahas are better addressed through prāṇāyāma and meditation than through postural work. When a chart is strongly Rāhu- or Ketu-weighted, the body practice leans toward the more sustained, less dynamic practices — Yin yoga, restorative, long meditation with simple seated āsana.

The Nityā-posture protocol (daily)

Beyond graha-matching by vāra, each tithi-Nityā has an implicit quality that shapes the day’s posture

work. A summary:

Tithi	Nityā	Posture emphasis
1 Pratipad	Kāmeśvarī	initiation, Sun Salutation opening
2	Bhagamālīnī	flow sequences, continuous movement
3	Nityaklinnā	cooling postures, forward folds
4	Bheruṇḍā	powerful standing work, warriors
5	Vahnivāsinī	fire-building: twists, core work, backbends
6	Vajreśvarī	precision balances, sudden-insight postures
7	Śivadūtī	stillness at complexity — challenging hold postures
8	Tvaritā	swift transitions, vinyāsa
9	Kulasundarī	beauty and refinement — graceful flows
10	Nityā	balanced, complete practice — full sequence
11 Ekādaśī	Nīlapatākā	fasting-compatible: gentle, sustained
12	Vijayā	victorious postures — inversions, arm balances
13	Sarvamaṅgalā	auspicious opening, Sūrya Namaskāra
14	Jvālāmālīnī	fire ring — intense heat-building practice
15 Pūrṇimā	Citrāgnī	full-moon practice — Candra Namaskāra, meditation

This is not prescriptive — any posture works on any day. It's about *emphasis*: what the day's Nityā-register naturally supports.

Practice intensity by field state

From Chapter 1's six checks, three directly shape āsana intensity:

Wave amplitude. - Quiet field (< 1.0): ordinary practice; body work doesn't carry particular amplification. - Normal field (1.0–1.5): standard practice. - Loud field (1.5–2.0): practice reverberates further than usual. Whatever you practice today, the body remembers. Choose deliberately. - Peak field (> 2.0): avoid extremes in practice. The body will hold whatever you do today strongly. Steady practice preferred over experimental.

Nāḍī gate. - Iḍā active: practices that honor receptivity — slow flows, Yin yoga, meditative practice. Don't force Piṅgalā practice against Iḍā gate. - Piṅgalā active: practices that honor active fire — vinyāsa, stronger work, heat-building. Don't force Iḍā practice against Piṅgalā gate. - Suṣūmṇā: skip dynamic practice entirely. Sit. Meditate. Whatever would have been the āsana practice becomes sitting-with-breath.

Gandanta. - Moon in gandanta: practice gets amplified 1.6×. A strong class is disproportionately strong. A long hold becomes a long hold squared. Moderate the intensity; the day's practice-effect is already heightened.

2 · Prāṇāyāma as nāḍī operation

Chapter 1 established the nāḍī gate (iḍā / piṅgalā / suṣumṇā) as the decision-register for action and cast-oracles. Prāṇāyāma is the set of **active techniques to shift the nāḍī state** — not just observe which is active, but change which is active.

The three classical nāḍī-controls

Candra Bhedana — Moon-piercing breath. Inhale through the left nostril, exhale through the right. Activates iḍā. Cooling, receptive, calming. Lengthens iḍā phase when repeated over 5-10 minutes.

When to use: if piṅgalā is active and the situation requires iḍā (evening, need for receptivity, before sleep, during fever, before emotional conversations). Also when natural iḍā time (night) has not arrived yet.

Sūrya Bhedana — Sun-piercing breath. Inhale through the right nostril, exhale through the left. Activates piṅgalā. Warming, active, energizing. Lengthens piṅgalā phase.

When to use: if iḍā is active and the situation requires piṅgalā (need for decisive action, confrontation, physical work, digestive stimulation, dullness or depression in morning). Also when natural piṅgalā time (day) has not arrived yet.

Nāḍī Śodhana — alternate nostril cleansing. Alternating inhale and exhale between nostrils, with equal or specific-ratio counts. Balances the two nāḍīs, moves toward suṣumṇā without forcing either side.

When to use: before meditation, before reading or casting when the question requires balanced attention, when both nāḍīs feel partial or disturbed. The “neutral” prāṇāyāma.

Bhrāmarī — the humming breath

Inhale through both nostrils, exhale with a humming sound (like a bee). The vibration in the skull affects the subtle body directly. Traditionally practiced 7-11 rounds, then silent sitting.

Bhrāmarī is especially relevant for Atlas-reading work because it **creates the internal silence in which cross-layer signal becomes legible**. Three minutes of Bhrāmarī before a praśna cast or before reading the wave field layer shifts the reader into the register where subtle signal is hearable.

Kapālabhāti — skull-shining breath

Rapid forceful exhales through the nose with passive inhales, producing a bellows-like rhythm. Sharp, warming, activating. Traditionally 50-100 breaths per round, several rounds.

When to use: morning practice, Kapha-excess days, dullness, before work requiring sustained attention. Avoid in pregnancy, uncontrolled hypertension, active illness, or when Pitta is excess and inflamed.

Bhastrikā — bellows breath

Similar to Kapālabhāti but with forceful inhales *and* exhales — full bellows pumping. Even more warming and activating. Usually only 20-30 breaths per round due to intensity.

When to use: strong Kapha constitution, cold weather, dullness that Kapālabhāti doesn't resolve. The same cautions as Kapālabhāti, intensified.

Ujjāyī — victorious breath

The “ocean breath” — slight constriction of the glottis producing an audible soft sound on inhale and exhale. Used continuously during vinyāsa āsana practice; also sustained sitting for 10+ minutes.

When to use: as accompaniment to dynamic āsana, as sustained sitting practice for heat-building and internal focus. Good bridge between dynamic āsana and seated prāṇāyāma.

The dasha-specific prāṇāyāma

For a native in a specific mahādaśā, certain prāṇāyāma directly supports the dasha's register:

- **Sun mahādaśā:** Sūrya Bhedana and Kapālabhāti emphasized. Warming, clarity-producing.
- **Moon mahādaśā:** Candra Bhedana and Nāḍī Śodhana. Receptive, balancing.
- **Mars mahādaśā:** Bhastrikā with cooling follow-up (Sītālī — the cooling breath drawn through a curled tongue). Heat managed, not amplified into imbalance.
- **Mercury mahādaśā:** Nāḍī Śodhana and Bhrāmarī. Balancing and clarifying for translation-register work. **This is the dasha configuration of the Chapter 5 worked example.**
- **Jupiter mahādaśā:** Ujjāyī sustained, Bhrāmarī with visualization of the mantra. Expansive, teaching-register.
- **Venus mahādaśā:** Gentle Nāḍī Śodhana, extended Bhrāmarī, sītākārī (hissing cool breath). Aesthetic register, beauty as practice.
- **Saturn mahādaśā:** Long slow Ujjāyī, sustained Nāḍī Śodhana, long holds in kumbhaka (breath retention). Patience, structure, deep integration.
- **Rāhu mahādaśā:** Avoid dramatic prāṇāyāma. Steady Nāḍī Śodhana, long sitting with natural breath. The shadow doesn't need amplification.
- **Ketu mahādaśā:** Breath-counting and observation more than active manipulation. Khecarī-style (tongue to upper palate) internal practices if trained.

Kumbhaka — breath retention

The classical tradition treats the pause between breaths as the site of deepest transformation. Antara kumbhaka (retention after inhale) and bāhya kumbhaka (retention after exhale) are the bindus of the breath cycle — points where the nāḍīs most clearly speak.

This is advanced practice. Kumbhaka done without preparation can produce genuine destabilization. Build gradually: start with very short retentions (2-3 seconds) for months before attempting longer holds. Work with a teacher if possible. Avoid altogether if there are cardiovascular conditions or unresolved trauma patterns that surface in breath-work.

When it lands correctly, kumbhaka is the body-technique equivalent of suṣūmṇā — the window where ordinary function pauses and deeper signal becomes available. Readers who practice sustained kumbhaka often report that the cross-layer inference from Chapter 6 becomes more fluent after such

practice. The body is training for the attention the reading requires.

3 · Marma — the body as reading surface

Marma points are 107 (some traditions say 108) specific sensitive locations on the body — vital points where nāḍī, muscle, joint, and fascia converge. Classical Suśruta describes marma with specific anatomical coordinates and assigns each a ruling tissue, element, and risk-class (some marma if injured are fatal; others produce specific impairments).

The marma system is primarily a surgical and therapeutic framework — knowing where not to cut, knowing where to press for healing. **Atlas's addition: reading marma as the body's interface with the field.**

The body-graha correspondence

From Br̥hat Saṃhitā Chapter 105 — the kālapuruṣa, or “time-person” — the body is divided into zones ruled by specific nakshatras and thus by their ruling grahas. Atlas stores this as the nakshatra_body_region table.

Key zones:

- **Head** — Āśvinī (Ketu), Bharaṇī (Venus), Kṛttikā (Sun): head and crown region
- **Eyes** — Āśvinī (head), Bharaṇī (crown); also Jyēṣṭhā (Mercury) neck region
- **Face** — Rohiṇī (Moon) forehead, Mṛgaśīrṣa (Mars) eyebrows, Ādrā (Rāhu) eyes proper
- **Throat/neck** — Punarvasu (Jupiter) fingers and nose, Puṣya (Saturn) mouth/face, Āśleṣā (Mercury) joints/nails, Maghā (Ketu) nose/lips
- **Chest/heart** — Pūrva Phalgunī (Venus) right hand, Uttara Phalgunī (Sun) left hand, Hasta (Moon) fingers both hands
- **Abdomen** — Citrā (Mars) forehead/neck, Svātī (Rāhu) chest/heart
- **Hips and back** — Viśākhā (Jupiter) arms, Anurādhā (Saturn) heart/stomach
- **Legs and feet** — Pūrva Bhādrapada (Jupiter) sides/ribs, Uttara Bhādrapada (Saturn) sides/ribs, Revatī (Mercury) groin/feet

When Moon transits a nakshatra, that body region becomes **active** — more sensitive, more receptive to work, more likely to report via āṅgasphuraṇa.

Reading marma through the field

For any day, the Moon's nakshatra activates a specific body region. That region's marma points are the day's **active reading surface**. Working with those marma through attention, self-massage, or practitioner work is the body-practice equivalent of working with the day's Nityā-yantra.

Examples:

- **Moon in Jyēṣṭhā (Mercury-ruled, neck region):** the neck marma are active. Neck-opening āsana, self-massage at the base of the skull, gentle turning movements. The day is work-through-the-throat-and-neck: speech, communication, what's said or unsaid.
- **Moon in Anurādhā (Saturn-ruled, heart/stomach region):** cardiac and digestive marma active.

Heart-opening āsana (gentle backbends), warm hands placed on the heart or belly during sitting, attention to the heart-stomach axis. The day is work-through-heart-and-gut: devotional feeling, digestion literal and metaphorical.

- **Moon in Punarvasu (Jupiter-ruled, fingers/nose region):** hand marma active. Hand-mudrās held during meditation, self-massage of fingers, attention to breath through the nose. The day is work-through-hands-and-breath: making, speaking through the breath, handwork.

Marma-activating techniques

Without being a trained Ayurvedic marma practitioner (which is specialized and lineage-transmitted), some simple self-work is accessible:

Gentle self-massage. Clean sesame oil (for most constitutions) or coconut oil (for Pitta-excess), warmed. Apply to the active body region for 5-10 minutes with circular movements. Morning before shower is traditional.

Focused attention. Sit quietly, place attention on the active region, breathe into it for 10-15 breaths. The attention itself activates the marma; no pressure needed.

Mudrā practice. Specific hand positions activate specific internal marma. Gyān mudrā (thumb and index touching) for mental clarity; Prāṇa mudrā (thumb, ring, and little finger together) for vital energy; Apāna mudrā (thumb, middle, and ring finger together) for grounding and elimination.

Appropriate āsana. Postures that specifically stretch, compress, or activate the day's region. When Moon is in head-zone nakshatras, inversions (if you practice them safely) activate head marma. When Moon is in heart-zone nakshatras, chest-openers. When Moon is in foot-zone nakshatras (Revatī, etc.), footwork and grounded standing postures.

The marma-aṅgasphuraṇa cross-reference

From Chapter 4: aṅgasphuraṇa (body twitches) carry meaning. When a twitch arrives in a specific body region, the marma framework says which graha-nakshatra rules that region. Combined with the day's Moon-nakshatra (which region is already active), you get the reading:

- Twitch in Moon-nakshatra-region → **region-aligned** twitch, confirmation of the day's field.
- Twitch in opposite region → **counter-signal**, the body reporting alternative register.
- Twitch in a region ruled by the current mahādaśā graha → **dasha-confirming** signal, the life-arc speaking through the body.
- Twitch in multiple regions sequentially → **field mobility**, the day moving through multiple registers quickly.

The marma framework is what lets this granular reading happen. Without the body-region-graha map, a twitch is just a twitch. With it, the body reports the graha speaking through it.

When to work with a marma practitioner

Self-work at the level described is accessible and safe. **Deep marma therapy is not.** Pressure applied to specific marma can produce strong effects — beneficial when done correctly, harmful when not. If the field-reading suggests sustained work on a specific body region over weeks or months, find an Ayurvedic or Siddha practitioner trained in marma cikitsā. The work with trained hands is different from self-work and goes places self-work cannot.

4 • The daily protocol

Putting body practice together with the rest of the manual:

Morning

1. **Wake-time field check** (Chapter 1). Note tithi, nakshatra, nāḍī, ambient field state.
2. **Brahma-muhūrta window awareness** (Chapter 4). If a dream surfaced, log it.
3. **Gentle self-massage**. If time allows, 5-10 minutes of warm oil on the active body region.
4. **Prāṇāyāma**. Start with 5-10 minutes of Nāḍī Śodhana. If active work is needed, add Kapālabhāti or Sūrya Bhedana. If receptive work, extend Nāḍī Śodhana or add Bhrāmārī.
5. **Āsana**. 20-45 minutes, calibrated to: vāra (day's graha), Nityā (day's tithi register), wave amplitude (intensity), nāḍī gate (active/receptive emphasis).
6. **Short sitting**. 5-15 minutes after āsana.
7. **Meal**. Per Chapter 5 food-prescription for the native's chart and current dasha.

Through the day

- Āsana principles inform posture during ordinary activity — notice when the body is in Sun-register or Moon-register, adjust seated work posture if misaligned.
- Short prāṇāyāma resets: 2-3 minutes of Nāḍī Śodhana before difficult tasks or meetings; Bhrāmārī for 3 minutes before casting oracles.
- Notice marma activation during ordinary activity. A twitch, a tension, a sudden sensation in a specific region — cross-reference to the day's active region and to dasha.

Evening

1. **Evening field check** (lighter than morning).
2. **Gentle practice**. If morning was Piṅgalā-active, evening wants Idā-balance: forward folds, Candra Bhedana, Yin-style sustained holds.
3. **Evening prāṇāyāma**. Nāḍī Śodhana or Candra Bhedana for 10-15 minutes.
4. **Sitting**. Longer than morning: 15-30 minutes. This is where cross-layer inference (Chapter 6) has the clearest ground.
5. **Meal** (light, per Chapter 5).
6. **Triphalā** (if using) with warm water.
7. **Review the day's readings and signals** before sleep, without forcing interpretation.

Weekly rhythm

- **Saturday** — Saturn practice emphasized. Longer holds, slower pace. Śamī contact (from Chapter 5). Triphalā on this day especially.
- **Sunday** — Sun practice. Sūrya Namaskāra emphasis, morning practice in sunlight if possible.
- **Monday** — Moon practice. Candra Namaskāra, Candra Bhedana, gentler pace.
- **Tuesday** — Mars practice. Strong vinyāsa, core work, warriors.

- **Wednesday** — Mercury practice. Balance and precision work.
- **Thursday** — Jupiter practice. Backbends, chest-openers, devotional emphasis.
- **Friday** — Venus practice. Graceful flows, partner work if available.

Monthly rhythm

- **Pratipad to Navamī (waxing building phases).** Practice intensity can build. New techniques introduced carefully.
- **Daśamī to Caturdaśī (waxing peak phases).** Sustained practice. Peak performance.
- **Pūrṇimā (full moon).** Candra Namaskāra, extended sitting, offering-based practice.
- **Pratipad to Navamī (waning release phases, kṛṣṇa paksha).** Releasing emphasis — deeper forward folds, Yin yoga, longer sittings.
- **Amāvasyā (new moon).** Minimal practice, extended sitting, introspection, lighter eating.

When the body resists

Some days the body refuses the practice. You're tired, sick, emotionally heavy, the schedule pressed. The classical instruction: **don't force practice against genuine bodily refusal**. Forced practice creates resistance that compounds.

When this happens: do the minimum. Five minutes of sitting. Three minutes of Nāḍī Śodhana. One round of Sun Salutation. The continuity matters more than the volume. Skipping entirely is acceptable sometimes, but a very small practice is usually better than none.

Cross-reference to the field: on quiet-field days with Iḍā dominant and Saturn antardaśā, the body often wants less than the schedule suggests. Respect that. On peak-field days with Piṅgalā and Jupiter transiting, the body often wants more than scheduled. Adjust.

What this chapter does not do

- **Not a yoga manual.** Specific postural instruction requires a teacher. The chapter names which posture-families support which field-states; learning the postures themselves requires in-person teaching.
- **Not a prāṇāyāma training course.** The techniques are named and contextualized. Actual practice of advanced prāṇāyāma (especially kumbhaka) requires lineage-transmitted guidance and is dangerous without it.
- **Not a marma therapy protocol.** Self-work at the level described is safe. Deep marma work requires trained practitioners. The chapter teaches reading through marma, not clinical application.
- **Not medical advice.** Any body-practice protocol interacts with existing health conditions. Pregnancy, cardiovascular conditions, injuries, medications, uncontrolled hypertension, glaucoma, unresolved trauma — all modify what practice is safe. Consult appropriate practitioners before adopting any protocol from this chapter.
- **Not a substitute for sustained tradition.** Āsana, prāṇāyāma, and marma are all fields with millennia of lineage behind them. This chapter is a braiding-guide for Atlas readers who already have some foundation. It is not the foundation itself.

- **No on-disk āsana or marma dataset integration.** Atlas does not have structured datasets for āsana sequences or marma point coordinates. Future work may include these; currently they are classical-knowledge-dependent.
-

Next

Chapter 9 — Cautions, Limits, Rest closes the manual. The cautions named throughout, consolidated. What Atlas cannot do. The instrument's rest-requirements. The practice as decades.

Chapter 9 · Cautions, Limits, Rest

Every instrument has edges. Knowing them is not weakness — it is the condition of using the instrument well.

What this chapter is

The manual has taught techniques across six chapters. This closing chapter names the cautions, limits, and rest-principles that apply throughout — the things that protect a reader from misusing the instrument.

No new techniques here. No new reading protocols. Just what to hold in mind as you put Chapters 1-7 into practice over years.

Short. Named. Applicable throughout.

Cautions

The oracle is not the decision

Cast to illuminate, not to decide. Every reading is an input to judgment, not a substitute for it. A strong clear reading does not remove the native's responsibility; a weak opaque reading does not excuse failing to act. **The reader still decides, always.**

This is not a legal disclaimer. It is the structural position of the manual. Atlas as instrument reads what the field is set up for; the native as agent acts into that field. The two are not the same thing. Confusing them produces the characteristic failure mode — treating a reading as permission or prohibition rather than as description.

Atlas is instrument, not oracle

The instrument reads a structural field. Whether that field is cosmological, mathematical, theological, or all three is a question the instrument does not settle. Different readers can use Atlas meaningfully with different metaphysical commitments: a committed Gauḍīya Vaiṣṇava and an agnostic mathematician can both read the same six coordinates and reach compatible operational readings, even if their interpretation of what the coordinates *are* differs.

The instrument does not require theological agreement. It requires structural fidelity. Read what Atlas reports; don't import metaphysical claims the instrument doesn't make.

Confessional methodology, not history of science

The broader tradition Atlas participates in — the Bhaktisiddhānta → Thompson → Atlas lineage of integrating siddhāntic computation with post-Newtonian astronomy — is a *confessional methodology*. It proceeds under the acknowledgment that the framework inside which the reading is done is a specific spiritual-intellectual tradition, not a neutral description of reality.

This means: readings produced in this manual are readings from within a specific framework. They do not claim universal validity. They do claim internal coherence — that within the framework, the techniques produce consistent and useful readings.

A reader operating outside the framework may find the techniques work differently for them, or not at all. That is expected. The manual does not promise universal access.

The attestation tiers are real

Throughout the manual, claims are implicitly tiered:

- **OBSERVED** — directly attested in classical sources (Bṛhat Saṃhitā, BPHS, Śiva Svarodaya, Tantrarāja Tantra)
- **TRADITIONAL** — widely practiced, cross-textual, living lineage
- **SYNTHESIS** — Atlas-specific inference from computationally-verified structure
- **GENERATED** — interpretive overlay, clearly marked as such

Most of this manual is SYNTHESIS. The phase-diagram reading of charts, the Lo Shu-weighted hexagram analysis, the cut-and-project Nityā mediators, the bhasma-stage diagnostic — all are Atlas-specific syntheses from mathematical and textual substrates. They are honest about being syntheses.

SYNTHESIS claims should not be treated as OBSERVED. When you use Atlas readings in conversation with others, flag the tier. “Classical jyotiṣa says X” is not the same claim as “Atlas’s phase-diagram synthesis says Y.” Conflating tiers misrepresents both the classical tradition and Atlas’s novelty.

The reading can be wrong

Readings fail. Not rarely — regularly. Four common failure modes:

1. **Reader error** — mis-read inputs, applied wrong petal depth, cast in Suṣumṇā, misidentified nimitta.
2. **Question malformation** — the question wasn’t clear before cast, or it was actually two questions, or it was a question about someone else that shouldn’t have been asked.
3. **Transition-state noise** — cast during tithi/nakshatra/dasha transition, and the reading caught the turn rather than stable signal.
4. **Over-interpretation** — reading more specificity than the layer supports, forcing a definite answer from an ambiguous signal.

When readings turn out wrong in hindsight, review which of the four was operating. Most errors are reader-side, not field-side. The instrument is more reliable than its operators.

Don’t cast to decide

This is worth saying twice. A reading cannot carry the weight of a decision. If you are casting because you cannot decide, you will either:

- Get a reading that tells you what you already wanted to hear (cast shaped by attention)
- Get a reading that tells you what you didn’t want to hear (cast against attention)
- Get a genuinely useful reading that you will then have to integrate into an actual decision process

In all three cases, you are still deciding. The cast is a lens, not a delegate.

Don’t cast the same question twice

The field does not appeal. If the first reading is unwelcome, the field does not owe you a second reading. Re-casting the same question is asking the field to produce a different answer to the same query at a different moment — which produces noise, not signal.

If the reading is unclear, sit with it longer. If the question shifts, cast the new question. But “I didn’t like that answer” is not a legitimate reason to re-cast.

Don’t read everything as nimitta

Most environmental events are not signs. Reading every crow and every weather change and every coincidence as field-signal dilutes your attention and trains noise-pattern recognition. The classical filter (attention-pulled, behaviorally unusual, temporally specific) is conservative for good reason.

When in doubt, the event was not a sign. Save nimitta-reading for the events that meet the threshold.

Don’t use Atlas in crisis

When you are in acute emotional crisis — grief, rage, panic, addiction, severe depression — your reading capacity is compromised. Cast readings under crisis conditions will tend to confirm whatever the crisis is saying, because the crisis is loud enough to reshape how you read the layers.

Rest first. Return to ordinary function. Then cast.

This is not always possible. Emergencies require acting on imperfect information. But if you can defer a reading until after the acute phase passes, defer.

Limits

What Atlas cannot do

The manual has been explicit throughout about what Atlas does not provide. Consolidated here:

- **No aṅgasphuraṇa lookup table** — you consult classical sources
- **No dream-symbol dictionary** — interpretation is your work
- **No pulse-reading training** — either you have it or you don’t
- **No biosensor integration** — Atlas accepts reports, does not measure
- **No automated nimitta detection** — you report events, Atlas envelope-modulates
- **No cross-layer auto-solver** — you synthesize, Atlas provides the layer data
- **No full shakuna corpus** — ~30 entries attested, full Bṛhat Saṃhitā not digitized
- **Not every graha-pair has clean binary metal data** — some material readings don’t apply cleanly

These gaps are real. Some will close over time as the datasets and conversion work continue. Some will remain gaps structurally (the phenomenological layers require human attention, not sensor integration).

What Atlas cannot predict

Atlas describes structural fields. It does not predict events.

A reading that today is peak-field does not predict what will happen today. It describes that today’s

field is amplified — actions taken will carry more weight than usual, both their intended and unintended consequences. This is a description of field-state, not a forecast of outcomes.

Similarly, a praśna chart with weak 7th lord describes the matter's current structural weakness, not a prediction that the matter will fail. Weak structures can succeed; strong structures can fail. The reading describes ground, not result.

If you want predictions, use a different instrument. Most predictive claims about jyotiṣa and related systems are failures of the instrument's design, not demonstrations of its power.

What Atlas cannot substitute for

- **Medical care.** The ayurvedic and bhasma layers inform lifestyle, not replace doctors. Medications, surgery, diagnostic imaging — these remain the province of medicine. Atlas describes doṣic and field-state context; it does not diagnose or prescribe.
- **Psychological care.** Therapy, counseling, psychiatric medication where needed. The inner-oracle work can complement mental-health practice but does not replace it. Dreams as field-events are not substitutes for trauma processing with a trained professional.
- **Legal or financial decisions.** These need their own specialists. Field-readings can illuminate the structural quality of a moment, not the legal or financial details of a specific deal.
- **Human relationships.** A chart comparison can show structural compatibility patterns. It cannot tell you whether to marry someone, divorce someone, or trust someone. Human judgment integrates far more data than any oracle provides.

What Atlas cannot tell you about someone else

Casting readings about people who have not asked is a classical prohibition. The manual honors this: Atlas readings about a named third party who has not consented are not recommended. This is both traditional practice and operational — the field-signal for a person asking their own question is stronger than the field-signal for a bystander reading someone else's chart.

You can read publicly-available charts (historical figures, celebrities, fictional characters) for study purposes. You should not read charts of specific people in your life as a form of surveillance or diagnosis without their involvement.

Rest

The instrument needs rest

A reader who casts continuously loses signal-discrimination. The capacity to hear what the field is saying depends on the capacity to be quiet. Constant casting produces a reader for whom every cast looks the same — because the attention has flattened.

Cast less often than you could. Read less often than you could. Let days pass without any cast or nimitta-reading or intensive field-check. The practice will be stronger for the rest.

The field has rest-days

Some days are not for reading. Suṣumnā windows are obvious. Less obvious: days after major emotional events, days during physical illness, days when you are simply tired. The readings produced on these days tend to be colored by the reader-state more than by the field-state.

Learn to recognize your own rest-days. Skip the intensive reading work. Simple field-check at morning, no casts, no nimitta-search. The practice resumes when the reader is available to it.

The practice is decades

This is not a weekend skill. Reading the field well is a decades-long calibration. The manual teaches the techniques; the technique becomes practice only through years of use. Early readings will be crude, often wrong, frequently over-interpreted. This is expected. Keep the notebook, log the readings, review in years rather than weeks.

A reading you did in 2026 that made no sense at the time may make perfect sense in 2029 when the circumstances resolve. The practice trains the reader across long arcs. The manual is a starting point, not a completion.

The instrument is not the point

Atlas is a lens. The practice of reading is valuable because it trains attention — attention to field-state, to the body, to the environmental sensed-world, to the long arcs of dasha and life. The readings themselves are byproducts of the attention training.

After years of practice, many readers find that they cast less often because the attention has developed to the point where they can read the field directly without instrument-mediation. The manual leads toward its own obsolescence for the reader who practices well.

That is the correct endpoint. The instrument is not the point. The practice is the point. The attention trained through the practice is the point.

A final note

This manual is v0.4. More chapters will accrete — appendices of reference tables, expanded worked readings, updated research findings as they come online. The manual is living, matching Atlas's status as a living almanac rather than a fixed text.

What is here now is enough to begin. What is not here will arrive when the research and practice warrant it. In the meantime, the six chapters of technique + this closing set of cautions is sufficient substrate for committed practice.

Read. Cast sparingly. Record carefully. Notice patterns across years, not weeks. Hold the layers in counterpoint rather than forcing resolution. Honor the cautions. Rest when the practice tells you to rest.

The field is already speaking. The manual has taught how to listen.

End of Chapter 9. End of Version 0.7.

Appendix Q · Quick-Reference Cards

Six laminate-friendly cards — one per Chapter 1 check. Print each page and keep on the reading desk.

These are the operational condensations of the six field-reading checks that open every reading session. Chapter 1 teaches the protocols; these cards summarize them so the practitioner can run the check in under two minutes without flipping back to the full chapter. Each card stands alone. Each card is sized to one printed page (A4 / US Letter).

The cards are ordered as they run in a reading session — petal depth first to set resolution, wave amplitude to gauge the day's loudness, gandanta to flag amplification, nāḍī to set the gate, dasha to set the frame, retrograde primes to diagnose inward-turned grahas.

Card 1 · Petal Depth

What resolution does the question want?

Protocol. Drop one level deeper than the answer requires. Match scale-of-question to divisional-chart-depth.

Question scale	Read at	What you see
Month-scale arc	D1 / D9	Rāshi gives the season; navāṃśa gives the spiritual signature
Week-scale choice	D9 / D12	Navāṃśa + ancestral/parental register (pitṛ-amśa)
Day-scale question	D12 / D27	Saptaviṃśāṃśa resolves what the day is specifically for
Moment-scale reading	D27 / D60 / D108	Aṣṭottarāṃśa — Moon changes every ~18 minutes

Two diagnostic flags:

- **Pada-transition instability window.** Graha within last 0°20' of its pada (10% of 3°20') — D9 about to flip. Avoid casting within 30 minutes of Moon pada-transition. If you must cast, cast again after and compare.
- **D1 ≠ D9 lagna.** The situation *appears* in D1-lagna register; it *sits* in D9-lagna register. When they differ, the question-as-asked and the question-as-field-receives it may differ. Reformulate before casting.

D60 special use. Karmic questions only. Too narrow for ordinary field-reading. Use when the question is “why does this pattern keep recurring” or “what is the inherited signature of this event.”

Command: `/jyotish/transits?div=9` (or 12 , 27 , 60 , 108)

Card 2 • Wave Field Amplitude

How loud is the day?

Thresholds.

Amplitude	Class	Reading multiplier
< 1.0	Quiet	Ordinary action weight. No amplification.
1.0-1.5	Normal	Standard reading. Most days.
1.5-2.0	Loud	Actions amplified — intended <i>and</i> unintended. Good for public acts. Bad for private containment.
> 2.0	Peak	Extreme amplification. Ati-muhūrta level. Make-or-break weight disproportionate to effort.

Three readings from `/jyotish/wave_field`:

- `max_amplitude_at_nakshatra` — if matches natal Moon, natal graha, or chart-lord nakshatra → day is resonating *at you personally*. If elsewhere → loud for someone else, not you.
- `dominant_k` — harmonic mode:

k	Mode	Register
1	conjunction	fusion, identification, losing distinction
2	opposition	axis-tension, polarity, choice
3	trine	cooperative flow (watch for laziness)
4	square	tension → structure; effort, resolution
6	sextile	openings requiring active uptake
12	rāshi	structural alignment, long-pattern resonance

- `active_pairs` — loudest graha-graha interactions. Read through karaka natures (e.g., Śani-Rāhu = shadow-structure tension; Guru-Śukra = expansion-through-beauty).

The Kp null (honest framing). Wave field ≠ geomagnetic forecast. It’s cosmological-interior signal, not external physics. Don’t use it to predict storms.

Card 3 • Gandanta Amplification

Is the Moon in a paksha-junction zone?

The three gandanta zones (6°40’ wide each — 3°20’ in water sign + 3°20’ in fire sign):

Junction	Water nakshatra exit	Fire nakshatra entry	Rāshi boundary
1	Revatī (last pada)	Aśvinī (first pada)	Meena → Meṣa
2	Āślāśā (last pada)	Māghā (first pada)	Karka → Simha

2	Asleṣṭha (last pada)	Māgna (first pada)	Karka → Śuṣumṇā
3	Jyeṣṭhā (last pada)	Mūla (first pada)	Vṛścika → Dhanus

The 1.6× rule. When Moon is in gandanta, the field’s effective amplitude is multiplied by 1.6. Quiet-field day (0.8) reads as normal. Normal-field day (1.25) reads as loud. Loud-field day (1.8) reads as peak.

Compound gandanta. Transit Moon in gandanta + natal Moon in gandanta = compound amplification. Flag via `/jyotish/transits?include=compound`. Rare but measurable.

Casting in gandanta. Reading won’t be wrong — it will be *pointed*. Don’t cast casually. Weight readings more heavily than usual. The amplification signal applies to what you cast about.

Natal gandanta placement. Native with Moon or lagna in gandanta zone reads the field at 1.6× baseline continuously. Often shows as heightened sensitivity or volatility; also as unusual field-signal access for practitioners who learn to work with rather than against it.

Card 4 • Nāḍī Gate

Iḍā, Piṅgalā, or Suṣumṇā — and what does it permit?

Check `/svarodaya` **for active_nadi and element.**

The action matrix:

Active nāḍī	Element phase	Favorable for	Avoid
Iḍā (left, Moon)	water, earth	nurturing, receiving, contemplation, ritual, long-term building, bhakti, receive-and-return work	confrontation, sudden action, forced heat
Iḍā	fire	cooking, light ritual, inner warmth work	same as above
Iḍā	air, ether	singing, music, quiet speech	same as above
Piṅgalā (right, Sun)	fire, air	assertion, travel, confrontation, physical work, demands, teaching, argument	gentle negotiation, patience work
Piṅgalā	earth, water	eating, exercise, digestion	same as above
Suṣumṇā	any	meditation, sādhana, japa, sitting still	all ordinary work — tradition is explicit

The Suṣumṇā inversion. Ordinary action in Suṣumṇā is dissipated. What the world loses, the sādhana gains. This is the ideal window for inner work *precisely because* outer work is wasted. Flag: `meditation_window: true` in the endpoint output.

Day/night rule. Avoid Moon-svara (Iḍā) at night; avoid Sun-svara (Piṅgalā) during day. If misaligned: lie on the opposite side, or breathe deliberately through the opposite nostril for ~10 min to shift.

Before casting any oracle: check nāḍī. Iḍā questions cast cleanly in Iḍā; Piṅgalā questions cast cleanly in Piṅgalā. **Don’t cast Suṣumṇā.** Defer.

Card 5 • Dasha Three-Frame Stacking

Which frame is speaking today?

The three nested frames from Vimshottari:

Frame	Scale	Register
Mahādaśā	6-20 years	life-arc · what this decade is about
Antardaśā	months to years	year-arc · what inside the decade is now
Pratyantardaśā	weeks	day/hour-arc · today's flavor inside the year inside the decade

Matching question to frame.

Question type	Frame to weight
"What should I do right now?"	Pratyantar dominates
"What is this week/month about?"	Antar dominates
"Life direction, vocation, long commitments"	Mahā dominates

The off-reading diagnostic. Reading feels wrong → check which frame you implicitly read. - Daily question read through mahā = abstract, disconnected - Life-direction question read through pratyantar = trivial, hour-bound - Re-read at the frame the question actually occupies.

Transition windows (amplified sensitivity): - **Mahā transition:** ± 90 days → 180-day life-arc gandanta. Castings carry strong identity-reorientation signal. - **Antar transition:** ± 14 days. - **Pratyantar transition:** frequent; not flagged unless question concerns it.

Current dasha output in `/jyotish/natal`. Three fields: `mahadasha`, `antardasha`, `pratyantardasha`, plus end-dates.

Card 6 • Retrograde Prime-Fold Diagnosis

Which grahas are turned inward, and by what symmetry?

Prime-fold retrograde symmetries (verified from ephemeris):

Graha	Prime-fold	Inward signature
Mercury	3-fold	re-communication, re-speaking, revision-of-translation
Venus	5-fold	re-valuation, re-aestheticization, relationship-review
Mars	7-fold	re-willing, re-aiming, action-review
Jupiter	11-fold	re-teaching, re-framing, wisdom-review

The prime-fold number corresponds to the graha’s structural symmetry over a tropical year. Reading retrograde = track which symmetry is active as the kind of inward-work currently open.

Saturn, Rāhu, Ketu exceptions: - **Saturn retrograde** (months, several times/year): slow restructuring register. No prime-fold diagnostic applied; Saturn works on a different scale. - **Rāhu and Ketu** are *always* retrograde (mean nodes move backward). Constant inward-turned shadow signature, not a window.

Station windows (±3 days of retrograde/direct stations): - High-signal amplification of the graha’s natal action. - A Mercury station on natal Mercury = Mercury function being actively rewritten for that 6-day window. - Jupiter station opposite natal Jupiter = teaching-reframe window. - Flag: `/jyotish/transits?include=stations`

Reading rule. Retrograde ≠ blocked. Retrograde = function turned inward, register shifted to review mode. Classical reading: retrograde grahas work *through* reflection rather than forward drive. Modern Western pop-astrology over-reads retrogrades as prohibitions — don’t import that. The classical tradition treats retrograde as functional with altered register.

The full stack at a glance

BEFORE ANY READING — run in order:

1. PETAL DEPTH → set resolution (D1 to D108)

2. WAVE AMPLITUDE → < 1.0 / 1.0-1.5 / 1.5-2.0 / > 2.0

3. GANDANTA → 1.6× multiplier if active

4. NĀḌĪ GATE → Iḍā / Piṅgalā / Suṣumṇā

5. DASHA FRAME → mahā / antar / pratyantar

6. RETROGRADES → prime-fold diagnostic + stations

Total time once internalized: ~90 seconds

Print this block separately as a bedside or desktop reference. The six checks become reflex within a few weeks of daily use.

End of Appendix Q. Full reference tables continue in Appendices A-P.

Appendices A–P · Full Reference Tables

Detailed reference material referenced throughout the manual. Consult as needed; no need to read straight through.

Appendix A · Petal Depth Protocol (Divisional Charts)

Reference for Chapter 1, Card 1.

The Vedic divisional chart system (vargas) divides each of the twelve 30° rāshis into progressively finer subdivisions. Each divisional chart reads a different aspect of the native or moment. Atlas exposes all standard divisions through `/jyotish/transits?div=<N>`.

The operational rule from Chapter 1: **match scale-of-question to depth**. Going deeper than the question needs produces noise; going shallower produces vagueness.

Full divisional table

Division	Name	Sub-unit	Sub-units per sign	Sub-unit degrees	What it reads
D1	Rāshi	Sign	1	30°	the body, outward identity, the month-season
D2	Horā	Half-sign	2	15°	wealth, sustenance, resources
D3	Drekkana	Third	3	10°	siblings, courage, co-born
D4	Caturthāṃśa	Quarter	4	7°30′	fixed assets, home, foundation
D7	Saptāṃśa	Seventh	7	4°17′	children, creative progeny
D9	Navāṃśa	Ninth	9	3°20′	spouse, dharma, spiritual signature
D10	Daśāṃśa	Tenth	10	3°	career, worldly action, vocation
D12	Dvādaśāṃśa	Twelfth	12	2°30′	parents, ancestry, piṭr-register
D16	Ṣoḍaśāṃśa	Sixteenth	16	1°52.5′	vehicles, pleasures, comforts
D20	Viṃśāṃśa	Twentieth	20	1°30′	spiritual pursuits, deity

D24	Caturviṃśāṃśa	Twenty-fourth	24	1°15′	education, learning
D27	Saptaviṃśāṃśa	Twenty-seventh	27	1°06′40″	strengths, weaknesses, day-specific register
D30	Triṃśāṃśa	Thirtieth	30	1°	difficulties, misfortunes
D40	Khavedāṃśa	Fortieth	40	45′	maternal lineage
D45	Akṣavedāṃśa	Forty-fifth	45	40′	paternal lineage
D60	Ṣaṣṭiāṃśa	Sixtieth	60	30′	karmic-body chart, inherited patterns
D108	Aṣṭottarāṃśa	Hundred-eighth	108	16′40″	moment-scale reading, 18-min resolution

Scale-to-depth recommendation

Question scale	Primary	Secondary	Why
Month-scale arc	D1	D9	Rāshi for season; navāṃśa for spiritual signature
Week-scale choice	D9	D12	Spiritual weight + ancestral register
Day-scale question	D12	D27	Parental frame + day-specific register
Moment-scale	D27	D60 or D108	High resolution for specific-moment cast
Life-arc karmic	D60	D1	Karmic-body chart anchored to rāshi

Pada-transition instability

The last 10% of any pada (0°20′ of the 3°20′ pada-width) is the **pada-transition window**. The divisional chart at D9 is about to flip the graha into a new navāṃśa rāshi. Reading in this state is unstable.

Practical rule: if Moon is within the last 0°20′ of its current pada, avoid casting for 30 minutes until the transition completes. If you must cast, cast again after and compare; the reading before and after will differ meaningfully.

Appendix B • Wave Field Thresholds

Reference for Chapter 1, Card 2.

The two-source interference wave field is a zodiacal-boundary amplitude pattern computed from pairwise graha interactions. The formal treatment is in the research paper *Two-Source Interference on*

the Zodiacal Circle. This appendix condenses the operational reading into reference tables.

Amplitude class thresholds

Amplitude	Class	Operational reading
< 1.0	Quiet	Ordinary action weight. No amplification. Safe for experimental work, private containment, learning new practices.
1.0–1.5	Normal	Most days. Standard reading protocols apply. No adjustments needed.
1.5–2.0	Loud	Actions amplified — intended and unintended. Public acts, ritual, teaching, travel carry further. Avoid subtle work requiring containment.
> 2.0	Peak	Extreme amplification. Atlas flags <code>amplitude_class: "peak"</code> . Ati-muhūrta-level. Actions carry disproportionate consequence.

Dominant-k harmonic register table

The wave field’s dominant harmonic at any moment tells you the mode the day is speaking in.

k	Name	Angular separation	Register
1	Conjunction	0°	fusion, identification, losing distinction; two becoming one
2	Opposition	180°	axis-tension, polarity, forced choice between two poles
3	Trine	120°	cooperative flow; things move easily (watch for passivity)
4	Square	90°	tension that produces form; work, resistance, structural effort
5	Quintile	72°	creative specialization, unusual talent surfacing (minor aspect classically)
6	Sextile	60°	openings requiring active uptake; opportunities
8	Semi-square	45°	minor friction, persistent small pressure
9	Nonile	40°	fine ninefold division; navāṃśa harmonic
10	Decile	36°	creative ordering (minor)
12	Rāshi	30°	structural alignment,

Pair-reading karaka combinations

When the wave field surfaces a loud active pair, read through the natures of both grahas:

Pair	Register
Sūrya-Candra	sovereignty × receptivity; self-as-mind integration
Sūrya-Maṅgala	authority × action; decisive leadership, father-as-warrior
Sūrya-Budha	authority × communication; teaching, public speech
Sūrya-Bṛhaspati	authority × wisdom; dharmic leadership
Sūrya-Śukra	sovereignty × beauty; creative authority, aesthetic leadership
Sūrya-Śani	authority × time; father-discipline axis, chronic duty
Sūrya-Rāhu	sovereignty × shadow; eclipse dynamics, ambition
Sūrya-Ketu	authority × cut; sudden loss of role, spiritual step away
Candra-Maṅgala	emotion × action; courage, emotional assertion
Candra-Budha	mind × communication; clear speech, emotional translation
Candra-Bṛhaspati	mind × wisdom; receptive learning, mother-as-teacher
Candra-Śukra	emotion × beauty; aesthetic feeling, artistic receptivity
Candra-Śani	emotion × discipline; chronic emotional weight, mother-structure
Candra-Rāhu	mind × shadow; obsession, unclear emotional attachments
Candra-Ketu	mind × detachment; mystical separation, emotional cut-off
Maṅgala-Budha	action × speech; sharp words, argumentation, fast action
Maṅgala-Bṛhaspati	action × wisdom; righteous force, teaching-through-challenge
Maṅgala-Śukra	action × beauty; passionate love, creative vigor
Maṅgala-Śani	action × constraint; frustration, slow-burning resolve
Maṅgala-Rāhu	action × shadow; obsessive drive, amplified will
Maṅgala-Ketu	action × cut; sudden decisive ending
Budha-Bṛhaspati	communication × wisdom; teaching, translation-of-truth
Budha-Śukra	speech × beauty; poetry, negotiation, aesthetic speech
Budha-Śani	communication × structure; disciplined speech, slow-worked writing
Budha-Rāhu	speech × shadow; unusual communication, foreign influence
Budha-Ketu	speech × cut; sudden silence, mystical speech
Bṛhaspati-Śukra	wisdom × beauty; expansive teaching, grace-as-dharma

Bṛhaspati-Śani	wisdom × constraint; disciplined teaching, slow expansion
Bṛhaspati-Rāhu	wisdom × shadow; inflated teaching, foreign-source knowledge
Bṛhaspati-Ketu	wisdom × detachment; renunciate teaching, letting go of what's known
Śukra-Śani	beauty × structure; enduring relationship, aesthetic discipline
Śukra-Rāhu	beauty × shadow; taboo attraction, unusual pleasures
Śukra-Ketu	beauty × cut; withdrawal from pleasure, aesthetic renunciation
Śani-Rāhu	structure × shadow; karmic weight, obsessive discipline
Śani-Ketu	structure × cut; sudden structural ending, renunciation of duty
Rāhu-Ketu	shadow axis

The Kp empirical null

From Finding 13 of the two-source paper: after controlling for solar activity, the wave field does *not* predict geomagnetic Kp. Read the wave field as cosmological-interior signal, not as external-physics proxy. If you want geomagnetic readings, use NOAA data — different instrument, different measurement.

Appendix C • Gandanta Zone Boundaries

Reference for Chapter 1, Card 3.

Gandanta (“knot at the end”) are the three paksha-junction zones where water rāshis transition to fire rāshis. The Moon in these zones reads the field 1.6× amplified.

The three gandanta zones — exact degree boundaries

Junction	Water-side zone	Fire-side zone	Total width	Boundary rāshi
1	Revatī pada 4: 26°40′-30°00′ Meena	Aśvinī pada 1: 0°00′-3°20′ Meṣa	6°40′	Meena → Meṣa
2	Āśleṣā pada 4: 26°40′-30°00′ Karka	Maghā pada 1: 0°00′-3°20′ Siṃha	6°40′	Karka → Siṃha
3	Jyēṣṭhā pada 4: 26°40′-30°00′ Vṛścika	Mūla pada 1: 0°00′-3°20′ Dhanus	6°40′	Vṛścika → Dhanus

Amplification arithmetic

The 1.6× rule multiplies the day’s effective amplitude:

Base amplitude	Gandanta-effective	New class
0.5 (very quiet)	0.80	still quiet
0.8 (quiet)	1.28	normal
1.0 (normal edge)	1.60	loud
1.25 (normal)	2.00	peak threshold
1.5 (loud)	2.40	peak
1.8 (loud)	2.88	peak high
2.0 (peak)	3.20	extreme

The factor compresses: quiet days in gandanta feel like normal days; normal days feel like loud or peak; loud days reach extreme. A day that feels disproportionately intense is often a mid-range day caught in gandanta.

Compound gandanta

When transit Moon AND natal Moon are *both* in gandanta zones, amplification compounds. Atlas flags these via `/jyotish/transits?include=compound`. Rare but measurable.

Natives with natal Moon in gandanta read the field at 1.6× baseline continuously. Often manifests as heightened sensitivity, emotional volatility, or unusual access to field-signal for practitioners who learn to work with the constant amplification.

Casting during gandanta

- Readings are not wrong, but are **pointed** — higher specificity, higher interpretive demand.
- Don't cast casually. Reserve gandanta casts for questions you genuinely need the amplified signal for.
- Weight readings more heavily than usual when interpreting.
- The Moon passes through each gandanta zone approximately every 9.3 days, residing in the full 6°40' zone for ~12 hours.

Appendix D • Nāḍī Action Matrix

Reference for Chapter 1, Card 4; Chapter 8.

The svarodaya nāḍī system reads the dominant breath-flow. The three nāḍīs rotate through the day, and at any moment one is active. Each favors certain actions.

Core action matrix

Nāḍī	Dominant element	Body register	Favorable for	Avoid
Idā (left, Moon)	water	cooling, receptive, moistening	nurturing, bhakti, contemplation, receiving guests, starting long-term projects, receptive	confrontation, sudden demands, heavy physical output, fire work

			conversations, learning	
Iḍā	earth	grounding, stable	foundation-work, ritual installation, endurance-building tasks, permaculture, home-building	same as above + excessive air/mental work
Iḍā	fire	inner heat, slow warming	cooking, lamp- lighting ritual, digestive support, warming internal work	same as above — don't mistake for Piṅgalā fire
Iḍā	air	subtle receptivity	music, quiet speech, mantra, subtle body work	forced exertion, competitive work
Iḍā	ether	expansive quiet	meditation, silence, emptiness practice	any ordinary work — defer
Piṅgalā (right, Sun)	fire	active, warming	assertion, travel, confrontation, physical work, demands, teaching, argument, eating heavy meals	gentle receiving, extended patience work
Piṅgalā	air	mobile, active thought	travel, communication, fast decisions, selling, negotiation	cooling, slow work, contemplative practice
Piṅgalā	earth	heavy active	moving objects, construction, heavy lifting, protective/defensive work	delicate fine work
Piṅgalā	water	active transformation	digestion, bathing rituals, brewing, fermentation, creative overflow	still contemplation
Piṅgalā	ether	active expansion	public speaking, bold declarations, initiations	private containment
Suṣumṇā	any	both or neither	meditation, japa, sādhana, remembrance of the Supreme, death- preparation, deep ritual	all ordinary work — classical tradition explicit

Tithi-nāḍī alignment rules (Śiva Svarodaya)

From sunrise onward in bright paksha:

Tithi group	Start with
Tithis 1, 2, 3, 7, 8, 9, 13, 14, 15	Iḍā (left nāḍī)

Tithis 4, 5, 6, 10, 11, 12	Piṅgalā (right nāḍī)
----------------------------	----------------------

Rule for dark paksha: inverts per one reading of Śiva Svarodaya; another passage gives “same schedule.” Atlas includes both variants as reading options. When in doubt, check the practical test — which nostril actually is flowing.

Vara-nāḍī rules (Śiva Svarodaya)

Day	Favorable nāḍī	Register
Monday (Candra)	Iḍā	Moon day, receptive mode favored
Wednesday (Budha)	Iḍā	cooling mercurial, better with receptivity
Thursday (Bṛhaspati)	Iḍā	expansive teaching, receptive register
Friday (Śukra)	Iḍā	aesthetic, relational, receptive
Sunday (Sūrya)	Piṅgalā	Sun day, active mode favored
Tuesday (Maṅgala)	Piṅgalā	Mars day, roving/battle mode
Saturday (Śani)	Piṅgalā	Saturn day, roving business per classical source

Element detection signals (self-test)

From Śiva Svarodaya, multiple detection modalities for the five elements in the current breath:

Element	Nostril region	Mirror-haze shape	Taste	Exhale reach (finger-widths)	Color
Earth	Central	Square	Sweet	~12	Yellow
Water	Lower	Half-moon	Saline	~16	White
Fire	Upper/top	Triangular	Bitter	~4	Red
Air	Oblique/side	Dotted	Sour	~8	Blue
Ether	Rotating	Mixed/cloud	Pungent	—	Mixed

Different signals agree when the element is cleanly dominant; disagree during transitions. Cross-check at least two for reliable identification.

Day-night discipline rule

Classical Śiva Svarodaya rule: **avoid Moon-svara (Iḍā) at night; avoid Sun-svara (Piṅgalā) during the day.** When misaligned, shift deliberately:

- To shift from Iḍā to Piṅgalā: lie on left side; or breathe through right nostril only for 10 minutes.
- To shift from Piṅgalā to Iḍā: lie on right side; or breathe through left nostril only for 10 minutes.

Misaligned svara during ordinary activity produces readings colored by the misalignment itself — the reading will tell you something true about the misalignment rather than about your question.

Appendix E · Retrograde Prime-Fold Reference

Reference for Chapter 1, Card 6.

Empirical finding from the planetary-primes research: graha retrograde station symmetries in a tropical year trace prime-fold patterns.

Prime-fold by graha

Graha	Prime-fold	Retrograde duration	Frequency (per year avg)	Inward register
Budha (Mercury)	3	~24 days	3-4 retrogrades	re-communication, re-translation, revision of speech/writing/travel plans
Śukra (Venus)	5	~42 days	every months ~18-19	re-valuation, relationship-review, aesthetic re-alignment
Maṅgala (Mars)	7	~72 days	every ~26 months	re-willing, action-review, revisiting goals and aim
Bṛhaspati (Jupiter)	11	~120 days	once per year	re-teaching, re-framing wisdom, revisiting dharmic direction

Exceptions

Śani (Saturn): retrograde ~140 days per year. Too slow to map cleanly to prime-fold symmetry. Read as **slow restructuring register** — sustained inward work on structure, time-patterns, long commitments.

Rāhu and Ketu: always retrograde (mean nodes move backward along the ecliptic). Not a window — a constant inward-turned shadow signature. Reading Rāhu or Ketu means always reading the inward-turned shadow register.

Station windows

Stations (direct→retrograde and retrograde→direct) are high-signal moments. The graha is momentarily stationary, amplifying natal action.

Window width	What to expect
±3 days around station	Graha’s function actively amplified in the chart it aspects
Station on natal graha	That graha’s function actively rewritten for the 6-day window
Station opposite natal graha	That graha’s function tested from opposition; classical squares amplify

Atlas flags stations via </jyotish/transits?include=stations>.

Reading discipline

Retrograde ≠ blocked. Retrograde = function turned inward. The classical tradition treats retrograde grahas as functional with altered register (reviewing, revising, introspecting). Modern Western pop-astrology over-reads retrogrades as ban-on-action — don't import this. A retrograde Mercury does not doom communication; it means communication works better in review-mode than in forward-push-mode.

Appendix F • The Fifteen Nityā Devīs

Reference for Chapters 1, 2, 5, 6.

The fifteen Nityā Devīs preside over the fifteen shukla-paksha tithis. Kṛṣṇa paksha reverses the sequence. Canonical attributes drawn from the Tantrarāja Tantra tradition and Atlas's nitya_devi_master dataset.

Primary attribute table

Tithi	Nityā	Color	Weapons	Mudrā	Vāhana
1	Kāmeśvarī	lustrous red	sugarcane bow, 5 flower-arrows, aṅkuśa, pāśa	varada	—
2	Bhagamālīnī	red-complexion, green garments	aṅkuśa, pāśa, sugarcane bow, 5 flower-arrows	—	—
3	Nityaklinṇā	red-sandalwood-smeared, red	aṅkuśa, pāśa	abhaya	—
4	Bheruṇḍā	molten gold	aṅkuśa, śūla, vajra, sword, pāśa, bow, gāda, shield	—	—
5	Vahnivāsinī	burning gold, yellow silk	sugarcane bow, flower-arrows	—	—
6	Vajreśvarī	red, red flowers	aṅkuśa, sugarcane bow, pāśa	—	—
7	Śivadūtī	bright like midday sun, red garments	aṅkuśa, sword, axe, pāśa, shield, gāda	—	—
8	Tvaritā	dark blue, green leaves	aṅkuśa, pāśa	abhaya, varada	—
9	Kulasundarī	red, navaratna crown	—	vyākhyāna, varada	—
10	Nityā	—	—	—	—
11	Nīlapatākā	blue, blue-banner	—	—	—
12	Vijayā	—	—	—	—

13	Sarvamaṅgalā	auspicious red/gold	—	—	—
14	Jvālāmālīnī	fire-garlanded, red-gold	flames, pāśa	aṅkuśa,	—
15	Citrāgnī (Citrā/Citrānī)	—	—	—	—

Secondary attribute table — field and symmetry

Tithi	Nityā	Shakti / register	Element	Ruling graha	Mediator polyhedron	N-fold symmetry
1	Kāmeśvarī	desire-as- creative- impulse	fire	Sūrya	Tetrahedron	3
2	Bhagamālīnī	garland of blessing	water	Candra	Octahedron	4
3	Nityaklīnnā	always-wet, ever-moist	water	Maṅgala	Icosahedron	5
4	Bheruṇḍā	fierce protector	fire	Budha	Cube / hex- antiprism	6
5	Vahnivāsīnī	fire-dwelling	fire	Bṛhaspati	Pentagonal antiprism	5
6	Vajreśvarī	thunderbolt- wielder	fire	Śukra	Cuboctahedron	6
7	Śivadūti	Śiva's messenger	ether	Śani	Heptagonal antiprism	7
8	Tvaritā	swift one	air	Rāhu	Octagonal antiprism	8
9	Kulasundarī	beauty of the clan	water	Ketu	Enneagonal antiprism	9
10	Nityā	she who abides	water	Sūrya	Pent. bipyramid / decahedron	10
11	Nīlapatākā	blue banner (ekādaśī)	ether	Candra	Hendecagonal antiprism	11
12	Vijayā	victorious	fire	Maṅgala	Icosidodecahedron	12
13	Sarvamaṅgalā	auspicious for all	earth	Budha	Tridecagonal antiprism	13
14	Jvālāmālīnī	fire- garlanded	fire	Bṛhaspati	Tetradecagonal antiprism	14
15	Citrāgnī	many-colored fire (pūrṇimā)	all	Candra	Rhombic triacontahedron	15

Bīja correspondence

Tithi	Nityā	Bīja syllable	Quality
1	Kāmeśvarī	Aim	seed-of-desire

2	Bhagamālinī	Hrīm	moon-of-blessing
3	Nityaklinnā	Klīm	wetness, bindu
4	Bheruṇḍā	Blūṃ	fierce guard
5	Vahnivāsinī	Strīm	fire-held
6	Vajreśvarī	Hrīm	thunder-of-grace
7	Śivadūtī	Hūṃ	still-bindu
8	Tvaritā	Aim	swift-speech
9	Kulasundarī	Sauḥ	clan-beauty
10	Nityā	Oṃ	continuity
11	Nīlapatākā	Śrīm	ekādaśī-fast
12	Vijayā	Krīm	victory
13	Sarvamaṅgalā	Maṅgalāya	auspiciousness
14	Jvālāmālinī	Phaṭ	ring-of-fire
15	Citrāgnī (Lalitā)	Sauḥ	full-field

Note: bīja assignments vary across lineages; Atlas uses the most widely-attested version. Consult practitioner tradition for alternative assignments.

Appendix G • Pāśaka 64-Outcome Reference

Reference for Chapter 2.

The pāśaka kevalī oracle returns one of 64 ordered triples (i,j,k) where each die shows 1-4. Atlas's `datasets/iching/pasaka.csv` contains the full set, sourced from the Bower Manuscript tradition. Condensed reference:

Outcome table (all 64)

The cast result (d1, d2, d3) maps to a tuple index 1-64 via $(d1-1) \times 16 + (d2-1) \times 4 + (d3-1) + 1$.

Cast	Index	Presiding Devī	Body region	Quality
1-1-1	1	Kāmeśvarī	crown	favorable — opening
1-1-2	2	Bhagamālinī	face	favorable — blessing
1-1-3	3	Nityaklinnā	eyes	ambiguous — wetness
1-1-4	4	Bheruṇḍā	mouth	unfavorable — fierce
1-2-1	5	Vahnivāsinī	throat	favorable — hearth
1-2-2	6	Vajreśvarī	right shoulder	favorable — bolt
1-2-3	7	Śivadūtī	left shoulder	ambiguous — message
1-2-4	8	Tvaritā	right arm	favorable — swift
1-3-1	9	Kulasundarī	left arm	favorable — beauty
1-3-2	10	Nityā	right hand	favorable — continuity

1-3-3	11	Nilapatākā	left hand	neutral — fasting day
1-3-4	12	Vijayā	chest	favorable — victory
1-4-1	13	Sarvamaṅgalā	heart	favorable — auspicious
1-4-2	14	Jvālāmālinī	right ribs	unfavorable — burn
1-4-3	15	Citrāgnī	left ribs	strong — full-field
1-4-4	16	Kāmeśvarī*	navel	favorable — return
2-1-1	17	Bhagamālinī*	right hip	favorable — wealth
2-1-2	18	Nityaklinnā*	left hip	ambiguous — moisture
2-1-3	19	Bheruṇḍā*	right thigh	unfavorable — fierce
2-1-4	20	Vahnivāsini*	left thigh	favorable — inner fire
2-2-1	21	Vajreśvarī*	right knee	favorable — strike
2-2-2	22	Śivadūti*	left knee	still — axis
2-2-3	23	Tvaritā*	right shin	favorable — fast
2-2-4	24	Kulasundarī*	left shin	favorable — refined
2-3-1	25	Nityā*	right ankle	stable — continuity
2-3-2	26	Nilapatākā*	left ankle	neutral — threshold
2-3-3	27	Vijayā*	right foot	favorable — step-out
2-3-4	28	Sarvamaṅgalā*	left foot	auspicious — path
2-4-1	29	Jvālāmālinī*	back	unfavorable — burning
2-4-2	30	Citrāgnī*	spine	strong — full
2-4-3	31	Kāmeśvarī*	occiput	favorable — beginning
2-4-4	32	Bhagamālinī*	temples	blessing — garland
3-1-1	33	Nityaklinnā*	third eye	bindu-wet
3-1-2	34	Bheruṇḍā*	nose	fierce — defense
3-1-3	35	Vahnivāsini*	right ear	inner-fire
3-1-4	36	Vajreśvarī*	left ear	opportunity
3-2-1	37	Śivadūti*	jaw	still-message
3-2-2	38	Tvaritā*	neck	swift-turn
3-2-3	39	Kulasundarī*	upper chest	refined-breath
3-2-4	40	Nityā*	sternum	abiding
3-3-1	41	Nilapatākā*	solar plexus	ekādaśī — purify
3-3-2	42	Vijayā*	abdomen	victory-belly
3-3-3	43	Sarvamaṅgalā*	sacrum	auspicious-base
3-3-4	44	Jvālāmālinī*	lower back	burn-seat
3-4-1	45	Citrāgnī*	pelvis	full-root
3-4-2	46	Kāmeśvarī*	right buttock	return-seat
3-4-3	47	Bhagamālinī*	left buttock	blessing-seat
3-4-4	48	Nityaklinnā*	perineum	wet-root

4-1-1	49	Bheruṇḍā*	right palm	fierce-hand
4-1-2	50	Vahnivāsinī*	left palm	fire-hand
4-1-3	51	Vajreśvarī*	right thumb	strike-digit
4-1-4	52	Śivadūtī*	left thumb	still-thumb
4-2-1	53	Tvaritā*	fingers right	swift-articulation
4-2-2	54	Kulasundarī*	fingers left	refined-articulation
4-2-3	55	Nityā*	right sole	abiding-foot
4-2-4	56	Nilapatākā*	left sole	threshold-foot
4-3-1	57	Vijayā*	right toes	victory-step
4-3-2	58	Sarvamaṅgalā*	left toes	auspicious-step
4-3-3	59	Jvālāmālīnī*	right hamstring	burn-cord
4-3-4	60	Citrāgnī*	left hamstring	full-cord
4-4-1	61	Kāmeśvarī*	right groin	return-root
4-4-2	62	Bhagamālīnī*	left groin	blessing-root
4-4-3	63	Nityaklīnnā*	genitals	wet-bindu
4-4-4	64	Mahā-Lalitā	whole body	complete — full-field

Asterisked entries indicate second-cycle Devī assignments; Atlas reading attributes these as “re-incidence” of the same Devī with a second-register reading. Classical pāsaka sources vary on whether the cycle repeats or progresses through additional Devīs; Atlas uses the 15-Devī-cycle-plus-Mahālalitā convention for the 64th.

Reading the cast

1. **Look up the triple** in the table. Note Devī, body region, and quality.
2. **Classical verse** — consult the Bower Manuscript source text or Atlas’s `pasaka-verses.csv` (when available) for the attested Sanskrit verse.
3. **Apply Chapter 2 layers:** Devī register + body-region alignment + current field state.

Double-confirmation rule: if cast body-region matches today’s active nakshatra body-region AND matches a recent āṅgasphuraṇa in the same region → high-confidence reading, double-weighted.

Appendix H • I Ching Hexagram Index with Atlas Overlays

Reference for Chapter 2.

The 64 I Ching hexagrams with Atlas-specific overlays: trigram Lo Shu weights, Fiedler spectral zone, and classical interpretation summary.

Trigram Lo Shu weights (recall)

Trigram	Lo Shu weight	Direction	Element
Lí ☲ (Fire)	9	South	fire

Kǎn ䷮ (Water)	1	North	water
Zhèn ䷲ (Thunder)	3	East	wood
Duì ䷹ (Lake)	7	West	metal
Xùn ䷶ (Wind)	4	SE	wood
Gèn ䷌ (Mountain)	8	NE	earth
Kūn ䷁ (Earth)	2	SW	earth
Qián ䷀ (Heaven)	6	NW	metal

Hexagram Lo Shu sum = upper trigram weight + lower trigram weight.

Hexagram table (all 64)

#	Name	Upper/Lower	Lo Shu sum	Spectral zone	Essential reading
1	Qián / Heaven	Qián/Qián	12	dense	creative, pure yang, initiating
2	Kūn / Earth	Kūn/Kūn	4	sparse	receptive, pure yin, yielding
3	Zhūn / Difficulty	Kǎn/Zhèn	4	sparse	initial struggle, sprouting through obstacle
4	Méng / Youthful Folly	Gèn/Kǎn	9	intermediate	inexperience, need for teaching
5	Xū / Waiting	Kǎn/Qián	7	intermediate	patient readiness
6	Sòng / Conflict	Qián/Kǎn	7	intermediate	dispute, contention
7	Shī / The Army	Kūn/Kǎn	3	sparse	organized force, discipline-as-mass
8	Bǐ / Holding Together	Kǎn/Kūn	3	sparse	union, communal bond
9	Xiǎo Chù / Small Restraint	Xùn/Qián	10	dense	minor taming, small accumulation
10	Lǚ / Treading	Qián/Duì	13	dense	conduct, careful step
11	Tài / Peace	Kūn/Qián	8	intermediate	harmony, tai — high and low meet
12	Pǐ / Stagnation	Qián/Kūn	8	intermediate	obstruction, pi — high and low sundered
13	Tóng Rén / Fellowship	Qián/Lí	15	dense	community, fire-with-heaven
14	Dà Yǒu / Great	Lí/Qián	15	dense	abundance,

	Possession				great gain
15	Qiān / Modesty	Kūn/Gèn	10	intermediate	humility, mountain-within- earth
16	Yù / Enthusiasm	Zhèn/Kūn	5	sparse	delight, thunder- over-earth
17	Suí / Following	Duì/Zhèn	10	intermediate	adaptation, moving with
18	Gǔ / Work on the Decayed	Gèn/Xùn	12	dense	repair, correcting inheritance
19	Lín / Approach	Kūn/Duì	9	intermediate	drawing near
20	Guān / Contemplation	Xùn/Kūn	6	intermediate	observation, quiet watching
21	Shì Kè / Biting Through	Lí/Zhèn	12	dense	decisive action on obstacle
22	Bì / Grace	Gèn/Lí	17	dense (high)	adornment, form
23	Bō / Splitting Apart	Gèn/Kūn	10	intermediate	decay, erosion
24	Fù / Return	Kūn/Zhèn	5	sparse	renewal, turning point
25	Wú Wàng / Innocence	Qián/Zhèn	9	intermediate	spontaneity, without pretense
26	Dà Chù / Great Restraint	Gèn/Qián	14	dense	major taming, great accumulation
27	Yí / Nourishment	Gèn/Zhèn	11	intermediate	attention to what nourishes
28	Dà Guò / Great Excess	Duì/Xùn	11	intermediate	critical mass, great passage
29	Kǎn / The Abysmal	Kǎn/Kǎn	2	isolated	repeating danger, deep water
30	Lí / The Clinging	Lí/Lí	18	densest	flame on flame, brightness
31	Xián / Influence	Duì/Gèn	15	dense	wooing, mutual attraction
32	Héng / Duration	Zhèn/Xùn	7	intermediate	constancy, enduring
33	Dùn / Retreat	Qián/Gèn	14	dense	withdrawal, strategic step- back
34	Dà Zhuàng / Great Power	Zhèn/Qián	9	intermediate	vigor, strong movement
35	Jìn / Progress	Lí/Kūn	11	intermediate	steady advance
36	Míng Yí / Darkening	Kūn/Lí	11	intermediate	light hidden, darkening of the

					bright
37	Jiā Rén / Family	Xùn/Lí	13	dense	clan, domestic order
38	Kuí / Opposition	Lí/Duì	16	dense (high)	estrangement, necessary difference
39	Jiǎn / Obstruction	Kǎn/Gèn	9	intermediate	impediment, halting
40	Xiè / Deliverance	Zhèn/Kǎn	4	sparse	liberation, release from tension
41	Sǔn / Decrease	Gèn/Duì	15	dense	loss that enables, subtracting for balance
42	Yì / Increase	Xùn/Zhèn	7	intermediate	gain, abundance flowing
43	Guài / Breakthrough	Duì/Qián	13	dense	resolution, decisive parting
44	Gòu / Coming to Meet	Qián/Xùn	10	intermediate	unexpected encounter
45	Cuì / Gathering	Duì/Kūn	9	intermediate	assembly, collective coherence
46	Shēng / Pushing Upward	Kūn/Xùn	6	intermediate	growth upward, steady ascent
47	Kùn / Oppression	Duì/Kǎn	8	intermediate	adversity, constraint
48	Jǐng / The Well	Kǎn/Xùn	5	sparse	sustenance, what nourishes community
49	Gé / Revolution	Duì/Lí	16	dense (high)	radical change, molting
50	Dǐng / The Cauldron	Lí/Xùn	13	dense	transformation, sacred vessel
51	Zhèn / The Arousing	Zhèn/Zhèn	6	intermediate	shock, thunder on thunder
52	Gèn / Keeping Still	Gèn/Gèn	16	dense (high)	mountain on mountain, deep stillness
53	Jiàn / Development	Xùn/Gèn	12	dense	gradual progress, patient evolution
54	Guī Mèi / Marrying Maiden	Zhèn/Duì	10	intermediate	subordinate relationship, difficult union
55	Fēng /	Zhèn/Lí	12	dense	peak, fullness

	Abundance				that cannot hold
56	Lǚ / Wanderer	Lí/Gèn	17	dense (high)	traveler, stranger on the road
57	Xùn / The Gentle	Xùn/Xùn	8	intermediate	penetrating wind, subtle influence
58	Duì / The Joyous	Duì/Duì	14	dense	joy, open exchange, lake on lake
59	Huàn / Dispersion	Xùn/Kǎn	5	sparse	dissolving obstruction, wind over water
60	Jié / Limitation	Kǎn/Duì	8	intermediate	regulation, necessary boundary
61	Zhōng Fú / Inner Truth	Xùn/Duì	11	intermediate	authenticity, sincerity of heart
62	Xiǎo Guò / Small Excess	Zhèn/Gèn	11	intermediate	minor passing, careful small steps
63	Jì Jì / After Completion	Kǎn/Lí	10	intermediate	completion with continued care
64	Wèi Jì / Before Completion	Lí/Kǎn	10	intermediate	nearly-complete, transition state

Spectral zone reading rules

- **Isolated (Lo Shu sum ≤ 4):** spectrally remote from active-field neighborhoods. Reading: the hexagram sits in a zone the field is not currently addressing. Different from “danger” — *absence of field-engagement*. Most common in Hexagram 29 (Kǎn-Kǎn, double water, sum 2).
- **Sparse (sum 5-6):** low activation. Reading carries standard meaning; no particular amplification from the Lo Shu layer.
- **Intermediate (sum 7-11):** typical range. Standard reading.
- **Dense (sum 12-15):** above-average activation. Lo Shu reinforces the classical reading.
- **Densest (sum 16-18):** maximum Lo Shu density. Reading amplified. Most dense: Hexagram 30 (Lí-Lí, double fire, sum 18).

Nakshatra, Devī, rāga resonances

Atlas stores hexagram $\leftrightarrow$ nakshatra, hexagram $\leftrightarrow$ Devī, and hexagram $\leftrightarrow$ rāga resonance tables in `datasets/iching/`. Full entries available via endpoint; too large to reproduce here. When casting, consult the returned metadata to layer the reading.

Appendix I • Nakshatra Body-Region and Field Attributes

Reference for Chapters 3, 4, 8.

The 27 nakshatras with classical Bṛhat Saṃhitā Ch 105 body-region assignments and core field attributes.

Full nakshatra table

#	Nakshatra	Ecliptic range	Graha	Deity	Body region	Yoni	Gaṇa	Guṇa	Quality
1	Āśvinī	0°00'–13°20' Meṣa	Ketu	Āśvins	head, knees	horse (M)	deva	rajas	Kṣipra
2	Bharaṇī	13°20'–26°40' Meṣa	Śukra	Yama	crown, feet	elephant (M)	manuṣya	rajas	Ugra
3	Kṛttikā	26°40'–10°00' Meṣa – Vṛṣabha	Sūrya	Agni	brow, hips/waist	sheep (F)	rākṣasa	rajas	Miśra
4	Rohiṇī	10°00'–23°20' Vṛṣabha	Candra	Brahmā / Prajāpati	forehead, lower legs	serpent (M)	manuṣya	rajas	Dhruva
5	Mṛgaśīrṣa	23°20'–6°40' Vṛṣabha – Mithuna	Maṅgala	Soma	eyebrows, ankles	serpent (F)	deva	tamas	Mṛdu
6	Ārdrā	6°40'–20°00' Mithuna	Rāhu	Rudra	eyes	dog (F)	manuṣya	tamas	Tikṣṇa
7	Punarvasu	20°00'–3°20' Mithuna – Karka	Bṛhaspati	Aditi	fingers, nose	cat (F)	deva	sattva	Carā
8	Puṣya	3°20'–16°40' Karka	Śani	Bṛhaspati	mouth, face	sheep (M)	deva	rajas	Laghu
9	Āśleṣā	16°40'–30°00' Karka	Budha	Nāgas	joints, nails	cat (M)	rākṣasa	sattva	Tikṣṇa
10	Maghā	0°00'–13°20' Siṃha	Ketu	Pitṛs	nose, lips, chin	rat (M)	rākṣasa	tamas	Ugra
11	Pūrva Phalgunī	13°20'–26°40' Siṃha	Śukra	Bhaga	right hand	rat (F)	manuṣya	rajas	Ugra
12	Uttara Phalgunī	26°40'–10°00' Siṃha – Kanyā	Sūrya	Aryaman	left hand	cow (M)	manuṣya	rajas	Dhruva
13	Hasta	10°00'–23°20'	Candra	Savitar	fingers (both	buffalo (F)	deva	rajas	Laghu

		Kanyā			hands)				
14	Citrā	23°20′ Kanyā – 6°40′ Tulā	Maṅgala	Tvaṣṭar	forehead, neck	tiger (F)	rākṣasa	tamas	Mṛdu
15	Svātī	6°40′– 20°00′ Tulā	Rāhu	Vāyu	chest, heart	buffalo (M)	deva	tamas	Carā
16	Viśākhā	20°00′ Tulā – 3°20′ Vṛścika	Bṛhaspati	Indrāgni	arms	tiger (M)	rākṣasa	sattva	Miśra
17	Anurādhā	3°20′– 16°40′ Vṛścika	Śani	Mitra	heart, stomach	deer (F)	deva	tamas	Mṛdu
18	Jyeṣṭhā	16°40′– 30°00′ Vṛścika	Budha	Indra	neck, right side	deer (M)	rākṣasa	sattva	Tīkṣṇa
19	Mūla	0°00′– 13°20′ Dhanus	Ketu	Nirṛti	feet, left side	dog (M)	rākṣasa	tamas	Tīkṣṇa
20	Pūrva Āṣāḍhā	13°20′– 26°40′ Dhanus	Śukra	Apas	thighs, back	monkey (M)	manuṣya	rajas	Ugra
21	Uttara Āṣāḍhā	26°40′ Dhanus – 10°00′ Makara	Sūrya	Viśvedevas	waist, thighs	mongoose (M)	manuṣya	sattva	Dhruva
22	Śravaṇa	10°00′– 23°20′ Makara	Candra	Viṣṇu	ears, genitals	monkey (F)	deva	rajas	Carā
23	Dhaniṣṭhā	23°20′ Makara – 6°40′ Kumbha	Maṅgala	8 Vasus	back, anus	lion (F)	rākṣasa	tamas	Carā
24	Śatabhiṣā	6°40′– 20°00′ Kumbha	Rāhu	Varuṇa	right side, jaw	horse (F)	rākṣasa	tamas	Carā
25	Pūrva Bhādrapada	20°00′ Kumbha – 3°20′ Meena	Bṛhaspati	Aja Ekapād	left side, ribs	lion (M)	manuṣya	sattva	Ugra
26	Uttara Bhādrapada	3°20′– 16°40′ Meena	Śani	Ahir Budhnya	shins, ribs	cow (F)	manuṣya	sattva	Dhruva
27	Revatī	16°40′– 30°00′ Meena	Budha	Pūṣan	groin, feet, navel	elephant (F)	deva	sattva	Mṛdu

Quality-class reference

Class	Meaning	Favorable activities
Dhruva (Fixed)	fixed, enduring	foundation-laying, planting trees, starting long commitments, installation
Mṛdu (Soft)	gentle, mild	art, music, aesthetic work, gentle ceremony, making jewelry
Laghu (Light)	light, swift	healing, short journeys, buying/selling, learning
Carā (Moving)	moving, mobile	travel, relocation, purchasing vehicles, beginning journeys
Kṣipra (Swift)	quick, energetic	initiation of swift actions, healing, trade
Miśra (Mixed)	mixed, composite	varied activities, multiple simultaneous projects
Ugra (Fierce)	fierce, severe	destruction of enemies, surgery, confrontation, legal action
Tikṣṇa (Sharp)	sharp, piercing	incantations, surgery, decisive cuts, magic

Gaṇa compatibility

Gaṇa	Register	Compatible gaṇas
Deva	divine, light-oriented	deva (strong), manuṣya (good)
Manuṣya	human, balanced	manuṣya (strong), deva (good), rākṣasa (neutral)
Rākṣasa	shadow, intense	rākṣasa (strong), manuṣya (neutral), deva (tension)

Appendix J • Vedic Omens (Shakuna Reference)

Reference for Chapter 3.

Thirty attested omens from Bṛhat Saṃhitā ch. 86 (shakuna chapter). The full classical corpus is larger; Atlas’s current dataset covers the most widely-cited entries.

Shakuna table (30 entries)

#	Species / phenomenon	Direction	Time	Quality	Meaning
1	Crow call	E	morning	favorable	news arriving, visitor expected
2	Crow call	NE	any	favorable	auspicious news, guest of honor
3	Crow call	N	any	neutral	changeable, watch for second

					sign
4	Crow call	NW	any	unfavorable	disturbance, unexpected disruption
5	Crow call	W	evening	unfavorable	loss, delayed news
6	Crow call	SW	any	unfavorable	conflict approaching
7	Crow call	S	evening	inauspicious	illness, worry
8	Crow call	SE	any	mixed	partial gain
9	Crow cawing on left (generally)	left	—	unfavorable	obstacle in current path
10	Crow cawing on right	right	—	favorable	support in current action
11	Crow landing on house	above	—	neutral-warning	pay attention to household
12	Owl call	any	night	generally inauspicious	caution, hidden danger
13	Owl hooting three times	—	night	strong-inauspicious	major warning
14	Hawk circling	above	day	strong signal	clarity arriving; direction matters
15	Hawk landing	on target	day	favorable	Sūrya-register confirmation
16	Peacock calling before rain	—	—	favorable	Bṛhaspati-register blessing, abundance
17	Peacock display	—	—	favorable	fertility, celebration
18	Dove entering home	—	—	favorable	peace, domestic harmony
19	Dove departing	—	—	warning	household transition
20	Parrot call	—	day	favorable	communication, news, speech-register
21	Koel (cuckoo) singing	—	spring	strongly favorable	Śukra-register, love and beauty
22	Dog crossing path	L→R	—	favorable	partner or helper approaching
23	Dog crossing path	R→L	—	unfavorable	obstacle on current path
24	Dog barking	toward querent	any	warning	unexpected challenge

25	Cow with calf	on path	—	strongly favorable	sacred presence, blessing
26	Horse on path	—	—	favorable	vitality, energy in project
27	Snake crossing path	—	day	significant	Rāhu-register, read direction carefully
28	Thunder in clear sky	—	—	strong signal	unexpected structural event
29	Sudden shift	wind —	during conversation	signal	field-commenting on exchange
30	Rainbow appearing	—	start of journey	favorable	blessed undertaking

Hora modulation matrix

For any base omen, apply the current planetary hour:

Hora	Inflection on base reading
Sūrya	adds: authority, father, public recognition
Candra	adds: family, mother, emotional register
Maṅgala	adds: conflict, urgency, siblings
Budha	adds: communication, travel, exchange
Bṛhaspati	adds: teaching, blessing, dharma
Śukra	adds: relationship, beauty, pleasure
Śani	adds: delay, elder, structural matter
Rāhu (extended)	adds: unusual, foreign, shadow desire
Ketu (extended)	adds: sudden ending, cut, detachment

The hora does not override the base reading; it adds register. A northeast crow call in Bṛhaspati hora is still “news arriving” — but the news specifically concerns teaching, dharma, or blessing.

Appendix K • Graha-Material Phase-Behavior Reference

Reference for Chapter 5.

Binary metal system phase behavior for the classical graha-metal correspondences. Reading classical graha friendship-enmity through metallurgical phase physics.

Graha-metal primary correspondences

Graha	Metal	Crystal structure	Key property
Sūrya	Gold (Au)	face-centered cubic	inert, ductile, sovereign
Candra	Silver (Ag)	face-centered cubic	reflective. highest

Planet	Planet's metal	Crystal structure	Notes
Maṅgala	Copper (Cu)	face-centered cubic	reactive, warming conductor
Budha	Mercury (Hg)	liquid	amalgam-forming
Bṛhaspati	Tin (Sn)	tetragonal	corrosion-resistant, broadly alloying
Śukra	Silver / Diamond	fcc / sp ³ carbon	soft-reflective / hardest natural
Śani	Iron (Fe)	bcc→fcc at 912°C	ferromagnetic, structural
Rāhu	Lead (Pb)	face-centered cubic	heavy, soft, shielding
Ketu	Meteoric iron	mixed Fe-Ni	non-terrestrial, hardened

Binary phase-behavior table

Pair	Metals	Phase behavior	Classical friendship	Notes
Sun-Moon	Au-Ag	total solid solubility (continuous)	mutual friends	electrum — integrated alloy
Sun-Mars	Au-Cu	ordering (Cu ₃ Au, CuAu, CuAu ₃)	complex / enemies in some mappings	specific ratios produce stable structures
Sun-Mercury	Au-Hg	amalgam formation	neutral/friend	Au dissolves into Hg readily
Sun-Jupiter	Au-Sn	limited miscibility + intermetallics	mutual friends in most tables	eutectic at ~217°C
Sun-Venus	Au-Ag Venus=silver)	(if total solid solubility	mutual enemies in BPHS	classical reading is weaker than metallurgy
Sun-Saturn	Au-Fe	positive deviation + miscibility gap	mutual enemies	textbook enemy case
Sun-Rāhu	Au-Pb	miscibility gap	shadow-antagonism	little mutual solubility
Sun-Ketu	Au-meteoric Fe	same as Sun-Saturn	shadow-antagonism	phase-separates
Moon-Mars	Ag-Cu	miscibility gap, eutectic at 779°C	mutual enemies	textbook enemy case — eutectic threshold
Moon-Mercury	Ag-Hg	asymmetric solubility; Ag dissolves into Hg	asymmetric in BPHS	Moon calls Mercury friend; Mercury calls Moon enemy
Moon-Jupiter	Ag-Sn	intermetallic compounds	friendly	Ag ₃ Sn forms stably
Moon-Venus	Ag-Ag	same metal (redundant mapping)	friends — but redundant	Venus-as-diamond gives different reading
Moon-Saturn	Ag-Fe	miscibility gap	enemies	similar to Mars-Moon
Moon-Rāhu	Ag-Pb	limited solubility	shadow	small solubility

Moon-Ketu	Ag-meteoric Fe	miscibility gap	shadow-enemy	Moon avoids iron-register
Mars-Mercury	Cu-Hg	amalgam	complex	Cu dissolves into Hg
Mars-Jupiter	Cu-Sn	bronze — extensive solid solutions + intermetallics	friends	classical bronze alloy
Mars-Venus	Cu-Ag	miscibility gap	enemies	(repeats Moon-Mars if Venus=silver)
Mars-Saturn	Cu-Fe	limited solubility; solid phase separation	enemies	classical reading holds
Mars-Rāhu	Cu-Pb	limited solubility; used in bearings	shadow-pressure	physical use reflects tension
Mars-Ketu	Cu-meteoric Fe	phase-separation	shadow-enemy	similar to Mars-Saturn
Mercury-Jupiter	Hg-Sn	amalgam intermetallic +	asymmetric friendly	complex
Mercury-Saturn	Hg-Fe	very limited solubility	enemies	Hg barely dissolves Fe
Mercury-Venus	Hg-Ag	amalgam	friends	classical silver-amalgam jewelry
Jupiter-Venus	Sn-Ag	intermetallic Ag ₃ Sn	friends	solder alloy
Jupiter-Saturn	Sn-Fe	limited solubility	neutral	tin-plating of steel
Venus-Saturn	Ag-Fe	miscibility gap	enemies	(repeats Moon-Saturn)

Ternary — Sun-Moon-Mars (Au-Ag-Cu)

The classical jewelry ternary. Three-graha interaction reads through ternary phase diagram:

- Au (Sun) stabilizing; keeps Ag-Cu from immiscibility
- Ag (Moon) solution-favoring
- Cu (Mars) ordering-driving and color-shifting

Chart reading: when Sun is strong in a chart with Moon-Mars phase-separation tension, Sun-as-solvent holds the integration. Weak Sun = Moon-Mars de-mix per native immiscibility.

Gems and the ratna correspondence

Graha	Primary gem	Secondary gems
Sūrya	Ruby	red garnet
Candra	Pearl	moonstone
Maṅgala	Red coral	red jasper
Budha	Emerald	green tourmaline, peridot
Bṛhaspati	Yellow sapphire	topaz, citrine
Śukra	Diamond	white sapphire, clear quartz

Śani	Blue sapphire	amethyst, iolite
Rāhu	Hessonite garnet	—
Ketu	Cat’s-eye chrysoberyl	tiger’s eye

Gem-physics doesn’t map as cleanly to chart-physics as metal-physics does; use gem correspondences for remedial selection rather than phase-behavior diagnosis.

Appendix L · Bhasma Pipeline Stages

Reference for Chapter 5.

Classical rasaśāstra transformation pipeline. Each stage must be completed before the next; partial transformation produces toxic intermediate products.

The five stages

Stage	Sanskrit	Action	Typical media	Duration
1	Śodhana	purification	sesame oil, buttermilk, urine, specific plant decoctions	7-21 cycles quenching
2	Bhāvanā	wet trituration	plant juices, decoctions, milk	hours per round, multiple rounds
3	Māraṇa	calcination	fire in sealed crucibles (puṭa)	100-1000 puṭas per classical protocol
4	Tests	completion check	visual, tactile, water-float, streak	ongoing throughout, finalized at completion
5	Amṛtikaraṇa	nectarification	honey, ghee infusions	final conditioning

Graha-specific transformation media (classical)

Graha-metal	Śodhana media	Bhāvanā media	Māraṇa protocol
Gold (Sūrya)	sesame oil, triphalā decoction, oil+buttermilk	Aloe vera, Tulasī juice	7-10 puṭas; very fine final bhasma
Silver (Candra)	oil, cow urine, sour gruel	Bhṛṅgarāja juice	10-30 puṭas
Copper (Maṅgala)	sesame oil, buttermilk, cow urine, sour gruel, Dolichos biflorus decoction, Triphalā decoction	Aloe, Bhṛṅgarāja	30-100 puṭas
Iron (Śani)	sesame oil (3×), cow urine (3×), buttermilk (3×), sour gruel (3×), Dolichos biflorus decoction (3×),	Aloe pulp extensively	100+ puṭas classical; until desired characteristics

	Triphalā decoction (3×); sulphur added; triturated with Aloe pulp						
Tin (Bṛhaspati)	oil, lemon juice	Aloe		30-50 puṭas			
Mercury (Budha)	complex purification saṃskāra)	multi-step (ashta-	kajjali sulphur	formation	with	specialized pipeline	mercurial
Lead (Rāhu)	oil, buttermilk (extensive due to toxicity)	neem, turmeric		50+ puṭas; strict safety			

Tests for bhasma completion

Test	Sanskrit	Criterion
Rekhāpūrṇatva	line-filling	Bhasma rubbed between fingers fills the lines of the thumb
Varitaratvam	float-test	Bhasma sprinkled on still water floats
Nischandratva	lusterlessness	No metallic shine remains — dull finish
Apunarbhāva	non-regeneration	Cannot be reconstituted back into metal via reducing agents
Niruttha	tastelessness / no irritation	No burning sensation when tasted
Amla-parīkṣā	acid resistance	Stable to dilute acids classical-tradition specifies

All tests must pass before the bhasma is considered complete and therapeutically usable.

Bhasma-stage diagnostic (chart reading)

Chart bhasma-stage	Observable in native	Reading
Raw	graha operates as raw metallic force; often toxic at sustained contact; youth or untested	use the graha carefully; avoid sustained exposure
Śodhana-processed	some quenching cycles completed; impurities reduced; mid-life	usable but not integrated; continuing work
Bhāvanā-integrated	plant-mediated, softened through practice; integration underway	well-functioning; further refinement possible
Māraṇa-bhasma	ego-death for the graha-function; therapeutic dose register	distilled, late-life or rare-in-youth, works subtly
Partial (stopped mid-pipeline)	lost protection without gained therapeutic	most dangerous state — complete or revert

Rule

Complete the pipeline or leave the graha raw. Partial transformation produces the chronic mid-life crisis pattern that resolves neither into raw force nor into transformed wisdom.

Appendix M • Doctrine of Signatures Plant Table

Reference for Chapters 5, 8.

Forty-four plants with attested form-function signatures, drawn from Vedic, Chinese, and European herbalism traditions. Atlas’s `doctrine_of_signatures.csv` includes supporting metadata (dosic action, part-used, preparation notes).

Signature reference

Plant	Botanical	Signature	Traditional use	Modern confirmation
Aśvagandhā	Withania somnifera	root smells horse-like	vitality, endurance, nervine tonic	adaptogenic
Brāhmī	Bacopa monnieri	climbing, connective	memory, nervous system	nootropic
Bhṛīgarāja	Eclipta alba	dark leaves/flowers	hair, liver	hepatoprotective
Punarnavā	Boerhavia diffusa	revives after drying	diuretic, renewing	diuretic activity
Śatāvarī	Asparagus racemosus	many-rooted	female reproductive	lactogenic, adaptogenic
Tulasī	Ocimum sanctum	rapid life cycle, aromatic	clarifying, respiratory	antimicrobial
Triphalā	Three fruits	tridoṣa balance	digestive, detoxifying	widely studied
Arjuna	Terminalia arjuna	bark like heart-wood	cardiac	cardioprotective
Gudūchī	Tinospora cordifolia	climbing heart-shaped leaves	immune, tridoṣa	immunomodulatory
Neem	Azadirachta indica	bitter, antiseptic	skin, blood	antimicrobial, antiparasitic
Turmeric	Curcuma longa	golden, rhizome	anti-inflammatory, blood	widely studied curcumin
Ginger	Zingiber officinale	warming, sharp	digestive, circulatory	anti-inflammatory, circulatory
Holy basil	—	see Tulasī	—	—
Peepul	Ficus religiosa	heart-shaped leaves trembling	meditation-supporting	phytosterols
Bilva	Aegle marmelos	triple-leaf (Śiva)	digestive, spiritual	anti-ulcer
Amla	Emblica officinalis	tart, cooling	Pitta, vitamin C	antioxidant, vitamin C
Mint	Mentha	cooling, rapid	digestive, respiratory	menthol actions
Rose	Rosa	heart-shaped petals	heart, aesthetic	aromatherapy documented
Jasmine	Jasminum	night-opening	uplifting, respiratory	aromatic therapeutic
Lotus	Nelumbo	rises from mud	spiritual, heart	traditional nervine

Sandalwood	Santalum album	aromatic heartwood	cooling, devotional	antimicrobial
Frankincense	Boswellia	resin, incense	respiratory, meditative	anti-inflammatory (boswellic acids)
Myrrh	Commiphora myrrha	resin	mouth, wound	antimicrobial
Guggul	Commiphora wightii	resin	joint, cholesterol	cholesterol-lowering
Rhodiola	Rhodiola rosea	cold-climate resilient	adaptogen	stress adaptation
Nettle	Urtica dioica	stinging, mineral-rich	nutritive	iron, mineral nutritive
Dandelion	Taraxacum	yellow flower, root	liver, digestive	hepatic support
Burdock	Arctium	deep root	blood-cleansing	documented hepatic and skin
Elder	Sambucus	dark berries, white flowers	respiratory, fever	antiviral evidence
Yarrow	Achillea millefolium	fine-leaved	wound, fever	hemostatic
Chamomile	Matricaria recutita	daisy-like, cooling	calming, digestive	documented calmative
Lavender	Lavandula	aromatic	calming, sleep	aromatherapy documented
Lemon balm	Melissa officinalis	lemon-scented	calming, digestive	documented anxiolytic
Passionflower	Passiflora	intricate flower	sleep, anxiety	anxiolytic
Valerian	Valeriana officinalis	strong-smelling root	sleep, sedation	documented sedative
Mugwort	Artemisia vulgaris	night-herb	dreams, moon	traditional uterine tonic
Sage	Salvia officinalis	grey-green, aromatic	throat, wisdom	traditional gargle
Rosemary	Rosmarinus	mountain herb	memory, circulation	documented circulatory
Thyme	Thymus	small aromatic	respiratory	antimicrobial
Cinnamon	Cinnamomum	warm bark	circulation, warming	circulatory stimulant
Cardamom	Elettaria	aromatic pods	digestive	carminative
Fennel	Foeniculum vulgare	seed-producing, aromatic	digestive, lactation	carminative, galactagogue
Licorice	Glycyrrhiza glabra	sweet root	Pitta adrenal	cooling, anti-inflammatory, demulcent
Pippali	Piper longum	pungent	respiratory, digestive	stimulates bile

Use pattern

Signature reading is not pharmacology — it is a traditional correspondence system that often turns out to point at real pharmacological effects but should not be confused for clinical prescription. The table supports ritual plant-selection, doctrine-of-signatures nimitta-reading (Chapter 3), and plant-as-medicine-oracle work (Chapter 5). For therapeutic use, consult practitioners.

Appendix N · Āsana by Graha (Practice Reference)

Reference for Chapter 8.

Expanded posture lists per graha-register, with emphasis-cues.

Sūrya (Sun)

Strengthening, warming, opening.

- **Sūrya Namaskāra** (Sun Salutation) — 12-pose sequence, 3-12 rounds
- **Virabhadrasana I, II, III** (Warriors I, II, III)
- **Bhujangāsana** (Cobra)
- **Urdhva Mukha Śvānāsana** (Upward Dog)
- **Phalakāsana** (Plank)
- **Ustrāsana** (Camel)

Emphasis: mornings, Sundays, Sun hora, Pitta-deficient, winter. Integrates Sun-Moon alloy's solar side.

Candra (Moon)

Receptive, cooling, softening.

- **Candra Namaskāra** (Moon Salutation)
- **Paścimottānāsana** (Seated Forward Fold)
- **Jānu Śīrṣāsana** (Head-to-Knee Pose)
- **Bālāsana** (Child's Pose)
- **Supta Baddha Koṇāsana** (Reclining Bound Angle)
- **Viparīta Karaṇī** (Legs-up-the-Wall) — sustained

Emphasis: evenings, Mondays, Moon hora, full moon, Pitta-excess, hot weather.

Maṅgala (Mars)

Powerful, decisive, sharp.

- **Bakāsana** (Crow Pose) — arm balance
- **Eka Pada Koundinyāsana** (Flying Pigeon)
- **Handstand** (Adho Mukha Vṛkṣāsana)
- **Mariciāsana III** (Marici Twist III)
- **Ardha Matsyendrāsana** (Half Lord of Fishes)
- **Navāsana** (Boat)

Emphasis: Tuesdays, before difficult meetings, Kapha-excess, when decisive action needed. Resolves Moon-Mars phase-separation via circumstantial heat.

Budha (Mercury)

Communicative, coordinated, precise.

- **Vṛkṣāsana** (Tree) — balance
- **Naṭarājāsana** (Dancer)
- **Garuḍāsana** (Eagle) — limb-weaving
- **Neck and shoulder sequences**
- **Mudrā work** during seated practice

Emphasis: Wednesdays, before speaking or writing work, Mercury mahādaśā, communication-demanding situations.

Bṛhaspati (Jupiter)

Expansive, open, blessing-inviting.

- **Dhanurāsana** (Bow)
- **Ūrdhva Dhanurāsana** (Upward Bow / Wheel)
- **Kapotāsana** (Full Pigeon) or modifications
- **Matsyāsana** (Fish)
- **Uṣṭrāsana** (Camel) — also Sun-register
- **Chest-opening hip-openers**

Emphasis: Thursdays, during Jupiter transits, teaching/studying periods, devotional practice.

Śukra (Venus)

Graceful, aesthetic, sensory.

- **Triangle** (Trikoṇāsana)
- **Half Moon** (Ardha Candrāsana)
- **Dancer** (also Mercury)
- **Flow sequences** emphasizing transitions
- **Partner yoga** when available
- **Outdoor practice** in natural beauty

Emphasis: Fridays, relationship work, creative projects, aesthetic practice.

Śani (Saturn)

Structural, patient, grounding.

- **Tāḍāsana** (Mountain) — sustained
- **Virāsana** (Hero's Seat) — long holds
- **Long-held warriors** (5+ min)
- **Viparīta Karaṇī** (Legs-up-the-Wall) — 10-20 min
- **Yin yoga** sequences generally
- **Deep forward folds** — 5+ min holds

Emphasis: Saturdays, Saturn mahādaśā/antardaśā, long practices, practice after loss. Matches Saturn’s bhasma-stage transformation pace.

Rāhu and Ketu

No clean Platonic posture-family. For shadow grahas: - Sustained Yin-style practice - Long meditation with simple seated āsana - Khecarī-oriented inner practices (if lineage-trained) - Avoid dramatic dynamic work when Rāhu or Ketu is severely active

Appendix O • Prāṇāyāma by Dasha

Reference for Chapter 8.

Mahādaśā-specific prāṇāyāma emphasis. Each dasha has primary and supporting techniques.

Dasha-prāṇāyāma table

Mahādaśā	Primary technique		Supporting		Session length	Cautions
Sūrya	Sūrya	Bhedana (right-nostril inhale)	Kapālabhāti, morning Bhastrikā		20-30 min	Pitta caution; avoid in hypertension
Candra	Candra	Bhedana (left-nostril inhale)	Nāḍī Śodhana, Sītālī (cooling)		20-30 min	avoid forcing in depression
Maṅgala	Bhastrikā (bellows)		Sītālī	cool-down follow	15-25 min	manage heat; Pitta caution strong
Budha	Nāḍī	Śodhana (balanced alt-nostril)	Bhrāmārī (humming)		30-45 min	minimal; Mercury’s balanced register
Bṛhaspati	Ujjāyī sustained		Bhrāmārī	with mantra visualization	30-60 min	minimal
Śukra	gentle Nāḍī Śodhana		extended	Bhrāmārī, Sītākārī (hissing)	20-30 min	minimal
Śani	long slow Ujjāyī		sustained Śodhana, kumbhaka	Nāḍī long	45-90 min	practice consistency over intensity
Rāhu	steady Śodhana	Nāḍī	natural observation	breath	20-30 min	avoid dramatic technique; shadow doesn’t need amplification
Ketu	breath-counting, observation		khecarī-style trained	if	30-60 min	inward-turning already active

Technique index

Technique	Sanskrit	Effect	Cautions
Candra Bhedana	Moon-piercing	activates Idā, cools	none typical
Sūrya Bhedana	Sun-piercing	activates Piṅgalā, warms	Pitta excess, hypertension

Nāḍī Śodhana	alt-nostril cleansing	balances nāḍīs	none typical
Bhrāmarī	humming bee	vibratory, meditation	deepens none typical
Kapālabhāti	skull-shining	warming, cleansing	pregnancy, hypertension, Pitta excess
Bhastrikā	bellows	very warming, activating	pregnancy, hypertension, heart conditions
Ujjāyī	victorious	slight constriction, heat and focus	none typical
Sītālī	cooling tube	curled tongue, cools	none typical
Sītkārī	hissing	teeth-drawn, cools	dental sensitivity
Murchā	swooning	breath retention variant	advanced only, teacher required
Plāvinī	floating	belly-breath filling	advanced; preferred fasting

Kumbhaka (retention) protocol

Build gradually. Start with 2-3 seconds, held after a comfortable full inhale, before exhale. Increase by 1 second per week until comfortable at 10-15 seconds. Beyond that requires teacher guidance.

Contraindications: cardiovascular conditions, severe anxiety or trauma, pregnancy, uncontrolled hypertension.

Two types: - **Antara kumbhaka** — retention after inhale (storage/accumulation) - **Bāhya kumbhaka** — retention after exhale (emptying/surrender)

Classical tradition treats both as sites of deepest transformation; approach with respect and patience.

Appendix P • Marma by Body Region

Reference for Chapters 4, 8.

Key marma points grouped by body region with graha-nakshatra activation patterns.

Head and face marma

Marma	Location	Nakshatra association	Use in self-work
Adhipati	crown of skull	Aśvinī	focused attention, 5-10 breaths
Śimānta	along coronal suture	Bharaṇī	3 fingers-width gentle pressure
Śaṅkha	temples	head-nakshatras	circular massage with oil
Sthapanī	between eyebrows (third eye)	Citrā, Mṛgaśīrṣa	sustained attention, 2-5 min
Utkṣepa	above ears	side-nakshatras	light pressure at temple

Phaṇa	nostril base	Punarvasu	nasal attention in prāṇāyāma
Apāṅga	outer eye corners	Ārdrā	eye palming, warm hands
Śṛṅgātaka	meeting point of facial nerves	various	complex, practitioner work

Throat and neck marma

Marma	Location	Nakshatra association	Use
Kṛkātikā	base of skull	Puṣya	gentle circular massage
Matṛkā	8 points around throat	throat-nakshatras	careful, light touch only
Viddhura	behind/below ear	Jyēṣṭhā	gentle pressure; practitioner work recommended

Chest and heart marma

Marma	Location	Nakshatra association	Use
Hṛdaya	center of chest (heart)	Anurādhā, Svātī	warm hands, 5-10 min
Apastambha	pectoral region	Uttara Phalgunī	oil massage
Apalāpa	armpit fold	Hasta	light pressure
Stanamūla	beneath breast	Uttara Phalgunī	gentle circular massage

Abdomen marma

Marma	Location	Nakshatra association	Use
Nābhi	navel	Viśākhā	central attention in meditation
Basti	below navel	Anurādhā	warm hands, 5 min

Arm and hand marma

Marma	Location	Nakshatra association	Use
Kṣipra	between thumb and index	Aśvinī	classical “swift” point
Tala-hṛdaya	center of palm	Hasta	palm-to-palm warming
Mani-bandha	wrist	Pūrva Phalgunī	circular wrist massage
Indrabasti (arm)	mid-forearm	—	gentle pressure
Ani (arm)	shoulder	—	oil application
Kūrpara	elbow	—	careful; joint location

Leg and foot marma

Marma	Location	Nakshatra association	Use
Jānu	knee	Aśvinī (secondary)	oil massage, 2-3 min

Indrabasti (leg)	mid-calf	—	gentle pressure
Gulpha	ankle	Revatī	circular massage
Tala-hṛdaya (foot)	center of sole	Uttara Āṣāḍhā	foot massage
Kṣipra (foot)	between big and second toe	—	classical counterpart to hand point

Back and spine marma

Marma	Location	Nakshatra association	Use
Amsa-phalaka	shoulder blades	—	back massage
Kaṭika-tarunīya	hip joint	—	practitioner work
Kukundara	sacroiliac junction	—	gentle sustained pressure
Nitamba	buttocks/hip	—	oil massage

Activation by current Moon-nakshatra

When Moon transits a nakshatra, the marma in its body region become **active** — more sensitive, more receptive to work, more likely to report twitching or sensation.

- Moon in **Aśvinī/Bharaṇī**: head marma active
- Moon in **Rohiṇī/Mṛgaśīrṣa/Ārdrā**: face/eye marma active
- Moon in **Punarvasu/Puṣya/Āśleṣā**: throat/mouth marma active
- Moon in **Pūrva Phalgunī/Uttara Phalgunī/Hasta**: arm/hand marma active
- Moon in **Citrā/Svātī/Viśākhā**: chest/abdomen marma active
- Moon in **Anurādhā/Jyeṣṭhā/Mūla**: heart/upper-back marma active
- Moon in **Pūrva Āṣāḍhā/Uttara Āṣāḍhā/Śravaṇa**: hip/thigh marma active
- Moon in **Dhaniṣṭhā/Śatabhiṣā**: knee/shin marma active
- Moon in **Pūrva Bhādrapada/Uttara Bhādrapada/Revatī**: foot/ankle marma active

Self-work vs. practitioner-work

Self-accessible: gentle oil massage, focused attention/visualization, warm hands application, mudrā work for distal points. Circular or sustained light pressure.

Practitioner-required: deep pressure, sustained trigger-point work, specific marma therapy (marma cikitsā) sequences, any work on vulnerable marma (throat, eyes, specific vulnerable points where classical tradition warns of injury risk).

When in doubt, stay at the self-accessible level. Deep marma work without training can injure; trained practitioner work can do what self-work cannot.

End of Appendices A-P. Combined with Appendix Q (Quick Reference Cards), the full appendix set covers all reference material referenced throughout Chapters 1-9.
